MEC/MULTIPLE ANOMALY DISCOVERY FORM

UXO Supervisor: George Vaughn **Date:** 16 December 2014

Slope of Terrain (Check one box)	□	<10°	□	10° to 30°	□	>30°
Vegetation Cover (Check one box)	□	Cleared	□	Vegetated	□	Wetland
Inclination (Circle one)	0°	45°	90°	135°	180°	

Item Description/Justification/Comments

(2) M18, Smoke Grenade, Area SR864 – Grid IM315

Anomaly Type/Category (Check Appropriate Box)

□ UXO □ DMM □ Munitions Debris □ Practice Ordnance □ Inert Ordnance
□ Metal Waste □ Sub-surface Anomaly □ Other _____

Ordnance Positive Identification (If known, record below. Include fuze condition and disposition)

Quantity: 2	Ordnance Mark/Mod:	Nose Fuze Mark/Mod:	Tail Fuze Mark/Mod:
Ordnance Filler:	□ Explosive □ Propellant □ Pyrotechnic □ Other		N.E.W. 11.5oz of filler

Ordnance Category:

□ Bombs	□ Clusters/Dispensers	□ Grenades	□ Guided Missiles
□ Land Mines	□ Misc. Explosive Devices	□ Mortars	□ Underwater Ordnance
□ Rockets	□ Pyrotechnics and Flares	□ Projectiles	□ Small Arms

Fuzing Types

□ Piezo-Electric	□ Proximity (VT)	□ Impact	□ Base Detonating
□ All-ways Acting (PD)	□ Electric	□ Point Detonating	□ Influence
□ Mech Long Delay	□ Point-Initiating, Base-Detonating	□ Mechanical Time	□ Pressure
□ Powder Train Time Fuze (PTTF)	□ MT Superquick		

Status of MEC/UXO

□ Armed (fuzes sheared off) □ Unarmed

Physical Condition of MEC/UXO (Check all that apply)

□ Broken Open	□ Soil Staining	□ Filler Visible	□ Soil Sample Taken

FOR UXOSS USE

Disposition: (Clarify Under Remarks) □ Transport □ Leave In Place □ Other		Date:
Notifications To Installation By:	Initials: GHV	Date 16 Dec 2014
Storage Location: N/A		

Remarks: As required in the approved ESS, FPM will provide security for the MEC items until disposal is complete. Disposal operation is scheduled for 17 December 2014.

UXO – Ordnance fuzed, armed or otherwise prepared for action and fired or placed in such a manner that it constitutes a hazard
DMM – Ordnance that was disposed of by abandonment; may have been fuzed or armed, but was not employed
Inert – Same physical features as an ordnance item but does not and never did contain energetic material
Munitions Debris – Ordnance material that contained or was in contact with energetic material, which has been expended (e.g., fragments from projectile)

EL PASO
IRON & METAL CO.
1535 E. San Antonio Ave. El Paso, Texas 79901 (915) 532-6981

2/6/2015

To: CES/CEAN
550 Tabbosa Ave. Holloman AFB, NM. 88330-8458

On February 6, 2015, El Paso Iron and Metal 1, LTD received approx. 5,705 Lbs. of scrap metal links. The material was received through Holloman Military Base. The shipment was picked up and delivered by El Paso Iron and Metal, driver: Francisco Carrete, truck #108.

El Paso Iron & Metal 1, LTD. Assures that all of this material will subsequently be re-melted and recycled.

If you should have any further questions regarding this matter, please feel to contact me at (915)532-6981 ext.12.

Sincerely,
Jose A. Armijo, EPIM Sr. Buyer

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
XU854 MISSILE TEST STAND AREA MRS

Date(s) Sampled: December 9, 2014
Report Date: December 29, 2014
Job No.: FA20579 (Accutest), FA20579X (Empirical Laboratories)

SAMPLE IDs

SOIL:
FA20579-1, 1412220-01 (XU854ISH06A)

FIELD DUPLICATES:
FA20579-4, 1412220-04 (XU854ISH06C) is a field duplicate sample for FA20579-1, 1412220-01 (XU854ISH06A).

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batch OP54324: For explosives, the lab performed matrix spike and matrix spike duplicate samples for field sample FA20579-1 (XU854ISH06A).
Batches OP54351, GP25228: For perchlorate and nitrate, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch. It should be noted that the laboratory inadvertently did not use samples XU854ISH06S/D (FA20579-2 and -3) for MS/MSD analysis and were analyzed as normal samples. Since these are essentially duplicates of sample XU854ISH06A, but a field duplicate was already designated (XU854ISH06C), these results are not usable.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On December 9, 2014, one soil sample, one duplicate, and an MS/MSD were collected from Sites XU854 Missile Test Stand Area MRS, Holloman Air Force Base (AFB). The samples were analyzed for perchlorate by Method 6850, explosives by Method 8330B, and nitrate nitrogen by Method 9056A by Accutest Laboratories. The samples were also sent to Empirical Laboratories, LLC through Accutest for Nitrocellulose analysis by Method E353.2(MOD).

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), XU853 Missile Test Stand Area MRS and XU854 Able 51 Area MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times, surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• Notes

PERCHLORATE

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

  The following table summarizes the RPDs/total differences of field duplicate sample set XU854ISH06A/ XU853ISH06C.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (µg/kg)	Field Dup Result (µg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
XU854ISH06A	XU854ISH06C	Perchlorate	12.5	11.2	1.8	11.0	None	RPD < 30%

  Corrective Action: No qualifiers were applied since the RPD was within control limits.

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

NITRATE

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs/total differences of field duplicate sample set XU854ISH06A/ XU853ISH06C.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/kg)	Field Dup Result (mg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
XU854ISH06A	XU854ISH06C	Nitrate	31.3	31.4	1.0	0.3	None	RPD < 30%

Corrective Action: No qualifiers were applied since the RPD was within control limits.

NITROCELLULOSE

- According to the case narrative, each field sample was analyzed outside of holding time due to analyst oversight.
  Corrective Action: The holding time was 28 days, while samples were analyzed 30 days after sample collection. Since this exceedance is within 2x the holding time, the results are considered usable, albeit estimated, and are flagged "J."

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

  The following table summarizes the RPDs/total differences of field duplicate sample set XU854ISH06A/ XU853ISH06C.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (µg/kg)	Field Dup Result (µg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
XU854ISH06A	XU854ISH06C	Nitrocellulose	1.55 J	1.38 J	4.00	0.17	None	RPD < 30%

Corrective Action: No qualifiers were applied since the total difference was within control limits.

The sample results included in Job No. FA20579/FA20579X are deemed 100% complete and acceptable for their intended use.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20579

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date** 12/29/2014 11:28:01

4 Samples were collected on 12/09/2014 and were received at Accutest on 12/10/2014 properly preserved, at 2.6 Deg. C and intact. These Samples received an Accutest job number of FA20579. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54351

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-3MSD, FA20723-3MS were used as the QC samples indicated.

Matrix Spike Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in clean matix refer to Blank Spike.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54324

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20579-1MS, FA20579-1MSD, FA20723-1DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25228

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-1MSD, FA20723-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. For method performance in clean matrix refer to Blank Spike.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

1412220 Data Package

Sample Delivery Group Case Narrative

Receipt Information:
The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

The following issues were discovered with the COC and/or samples upon log-in:
1. The client IDs on the container did not match the IDs on the COC. The client was contacted and indicated the IDs on the container are project name on COC and Accutest sample number.

Changes to the Revision:
This is an original submittal of the final report package.

Analytical Information:
All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:
The following were analyzed outside of the method recommended holding time:
Nitrocellulose for 1412220-01, -02, -03, and -04; note – the samples were analyzed 30 days after sampling with a 28 day recommended holding time due to an analyst oversight

No additional anomalies or deviations are noted and the proper data qualifiers have been applied.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

***:** Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
XU854 MISSILE TEST STAND AREA MRS

Date(s) Sampled: December 11, 2014
Report Date: December 29, 2014
Job No.: FA20723 (Accutest), FA20723 (Empirical Laboratories)

SAMPLE IDs

SOIL:
FA20723-1, 1412221-01 (XU854ISH06Z1)
FA20723-2, 1412221-02 (XU854ISH06Z2)
FA20723-3, 1412221-03 (XU854ISH06Z3)

FIELD DUPLICATES:
There were no field duplicates collected in association with this analytical job.

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batch OP54351: For perchlorate, the lab performed matrix spike and matrix spike duplicate samples for FA20723-3.
Batch GP25228: For nitrate, the lab performed matrix spike and matrix spike duplicate samples for FA20723-1.
Batch OP54324: For explosives, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On December 11, 2014, three soil samples were collected from Site XU854 Missile Test Stand Area MRS, Holloman Air Force Base (AFB). The samples were analyzed for perchlorate by Method 6850, explosives by Method 8330B, and nitrate nitrogen by Method 9056A by Accutest Laboratories. The samples were also sent to Empirical Laboratories, LLC through Accutest for Nitrocellulose analysis by Method E353.2 (MOD).

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), XU853 Missile Test Stand Area MRS and XU854 Able 51 Area MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times, surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• Notes

PERCHLORATE

- It is noted the following analytes exceeded recovery limits in the MS/MSD samples (parent sample XU854ISH06Z3).

MS/MSD Spike Results Job Number/Spike Analytes	MS %Rec	MSD %Rec	QC Limits (%)	RPD	Flag Applied	Rationale
Accutest Job #FA20723: Parent sample XU854ISH06Z3						
Perchlorate	***44***	***55***	80-120	1	J	%Rec less than lower control limit

Corrective Action: For parent sample XU853ISC06Z3, a "J" flag was applied since the recovery was less than the lower control limit.

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

NITRATE

- It is noted the following analytes exceeded recovery limits in the MS/MSD samples (parent sample XU854ISH06Z1).

MS/MSD Spike Results Job Number/Spike Analytes	MS %Rec	MSD %Rec	QC Limits (%)	RPD	Flag Applied	Rationale
Accutest Job #FA20723: Parent sample XU854ISH06Z1						
Nitrate	***159***	***153***	90-110	2.6	J	%Rec greater than upper control limit

- **Corrective Action:** For parent sample XU854ISH06Z1, a "J" flag was applied since the recovery was greater than the upper control limit.

NITROCELLULOSE

- There were no quality control exceedances for the nitrocellulose analyses.

The sample results included in Job No. FA20723/FA20723X are deemed 100% complete and acceptable for their intended use.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20723

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date** 12/29/2014 11:34:17

3 Samples were collected on 12/11/2014 and were received at Accutest on 12/12/2014 properly preserved, at 3 Deg. C and intact. These Samples received an Accutest job number of FA20723. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54351

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-3MSD, FA20723-3MS were used as the QC samples indicated.

Matrix Spike Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in clean matrix refer to Blank Spike.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54324

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20579-1MS, FA20579-1MSD, FA20723-1DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25228

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-1MSD, FA20723-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. For metod performance in clean matrix refer to Blank Spike.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

Sample Delivery Group Case Narrative

Receipt Information:
The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

The following issues were discovered with the COC and/or samples upon log-in:

1. The client IDs on the container did not match the IDs on the COC. The client was contacted and indicated the IDs on the container are project name on COC and Accutest sample number.

Changes to the Revision:
This is an original submittal of the final report package.

Analytical Information:
All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:
No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

***:** Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
XU854 MISSILE TEST STAND AREA MRS

Date(s) Sampled: December 15, 2014
Report Date: January 6, 2015
Job No.: FA20794 (Accutest), FA20794X (Empirical Laboratories)

SAMPLE IDs

SOIL:
FA20794-1, 1412230-01 (XU854ISG06A)
FA20794-2, 1412230-02 (XU854ISN06A)
FA20794-3, 1412230-03 (XU854ISO06A)
FA20794-4, 1412230-04 (XU854ISI06A)

FIELD DUPLICATES:
There were no field duplicates collected in association with this analytical job.

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batches OP54473, OP54390, and GP25246: For perchlorate, explosives, and nitrate, the lab performed matrix spike and matrix spike duplicate samples for FA20794-1.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On December 15, 2014, four soil samples were collected from Site XU854 Missile Test Stand Area MRS, Holloman Air Force Base (AFB). The samples were analyzed for perchlorate by Method 6850, explosives by Method 8330B, and nitrate nitrogen by Method 9056A by Accutest Laboratories. The samples were also sent to Empirical Laboratories, LLC through Accutest for Nitrocellulose analysis by Method E353.2(MOD).

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), XU853 Missile Test Stand Area MRS and XU854 Able 51 Area MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times, surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• Notes

PERCHLORATE

- It is noted the following analytes exceeded recovery limits in the MS/MSD samples (parent sample XU854ISG06A).

MS/MSD Spike Results Job Number/Spike Analytes	MS %Rec	MSD %Rec	QC Limits (%)	RPD	Flag Applied	Rationale
Accutest Job #FA20794: Parent sample XU854ISG06A						
Perchlorate	***33***	***41***	80-120	1	J	%Rec less than lower control limit

Corrective Action: For parent sample XU854ISG06A, a "J" flag was applied since the recovery was less than the lower control limit.

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

NITRATE

- It is noted the following analytes exceeded recovery limits in the MS/MSD samples (parent sample XU854ISG06A).

MS/MSD Spike Results Job Number/Spike Analytes	MS %Rec	MSD %Rec	QC Limits (%)	RPD	Flag Applied	Rationale
Accutest Job #FA20794: Parent sample XU854ISG06A						
Nitrate	***80.4***	***79.7***	90-110	0.7	J	%Rec less than the lower control limit

Corrective Action: For parent sample XU854ISG06A, a "J" flag was applied since the recovery was less than the lower control limit.

- The response of the instrument indicated the %D for second source calibration verifications and/or continuing calibration verifications outside QC limits for individual analytes. The following table summarizes the exceedances:

Type of Calibration Exceedance Affected Analytes	%D	Method QC Limit	Flag Applied	Rationale
Accutest Job #FA20794: Continuing Calibration Verification GN64657-CCV3				
Nitrate	***112***	±10	J	%D greater than upper control limit

Corrective Action: When the %D was greater than the upper control limit, the results are considered estimated (may be biased high) and "J" flags were deemed necessary. According

to laboratory correspondence, there were integration issues isolated to a specific analyst associated with only the quality control samples associated with nitrate. The laboratory has taken corrective measures to prevent future issues. All field samples in this SDG were associated with this CCV.

NITROCELLULOSE

- There were no quality control exceedances for the nitrocellulose analyses.

The sample results included in Job No. FA20794/FA20794X are deemed 100% complete and acceptable for their intended use.

TABLE I

TABLE I
SUMMARY OF ANALYTES FAILING CRITERIA
SAMPLE DELIVERY GROUP NUMBER FA20794/FA20794X

QC Requirement & Criteria	Analytes Failing Criteria	Analytical Method	Result/Analysis Flags	Result Flag Applied to (Specific Analytes in)
MS/MSD recovery within control limits	Nitrate	9056A	J	XU854ISG06A
CCV %D greater than upper control limit	Nitrate	SW9056A	J	XU854ISG06A, XU854ISN06A, XU854ISO06A, XU854ISI06A
MS/MSD recovery within control limits	Perchlorate	6850	J	XU854ISG06A

San Antonio, Texas 78249

RE: Accutest job FA21080 Reissue

Dear Ms. Raicevic,

During a recent Accutest Management initiated 3rd party data review, an issue was discovered with some Ion Chromatography (IC) data. .Some anions in associated Quality Control (QC) samples (Calibration Checks and/or Blank Spikes) were incorrectly or inconsistently integrated. These integration issues were isolated to a specific analyst. Accutest Southeast performed a comprehensive review of all IC data reported by this analyst. As a result of this review it was determined that some IC data for this job needed to be footnoted. Since only QC samples were impacted by these integration issues (no sample results changed), only the potential uncertainty associated with a reported result is impacted.

Anions analyzed by Ion Chromatography via EPA 300 or SW846 9056A have method specified quality control limits of 90-110%. Revised quality control data for the samples in question had a maximum recovery of 110.4% for Nitrate. Footnote applied to fractions 1 through 11.

The final report for job number FA21080 has been edited to reflect these changes.

Accutest apologizes for any inconvenience this may have caused and has taken corrective measures to prevent future issues. Please feel free to contact us if we can be of further assistance.

Sincerely,

Rick Watkins
Laboratory Director
Accutest Laboratories, SE

Norm Farmer
Technical Director
Accutest Laboratories, SE

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20794

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 3:32:23 PM

4 Sample(s) were collected on 12/15/2014 and were received at Accutest SE on 12/16/2014 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of FA20794. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits in MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54390

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MS, FA20794-1MSD, FA20820-2DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25246

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. % RPD was within control limits in MS/MSD.

FA20794-1, 2, 3, 4 for Nitrogen, Nitrate: Associated CCV above upper control limits

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
XU854 MISSILE TEST STAND AREA MRS

Date(s) Sampled: December 16, 2014
Report Date: January 6, 2015
Job No.: FA20820 (Accutest), FA20820X (Empirical Laboratories)

SAMPLE IDs

SOIL:
FA20820-1, 1412231-01 (XU854ISP06A)
FA20820-2, 1412231-02 (XU854ISQ06A)
FA20820-3, 1412231-03 (XU854ISR06A)
FA20820-4, 1412231-04 (XU854ISL06A)
FA20820-5, 1412231-05 (XU854ISJ06A)

FIELD DUPLICATES:
There were no field duplicates collected in association with this analytical job.

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batches OP54773, OP54390, GP25246: For perchlorate, explosives, and nitrate, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On December 16, 2014, five soil samples were collected from Site XU854 Missile Test Stand Area MRS, Holloman Air Force Base (AFB). The samples were analyzed for perchlorate by Method 6850, explosives by Method 8330B, and nitrate nitrogen by Method 9056A by Accutest Laboratories. The samples were also sent to Empirical Laboratories, LLC through Accutest for Nitrocellulose analysis by Method E353.2(MOD).

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), XU853 Missile Test Stand Area MRS and XU854 Able 51 Area MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times, surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• Notes

PERCHLORATE

- According to the case narrative, the following samples were analyzed at initial dilution:

Sample	Analyte	Dilution
XU854ISL06A	Perchlorate	1:5

The dilution results only are reported and are used in data verification as representing original results. .

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

NITRATE

- The response of the instrument indicated the %D for second source calibration verifications and/or continuing calibration verifications outside QC limits for individual analytes. The following table summarizes the exceedances:

Type of Calibration Exceedance Affected Analytes	%D	Method QC Limit	Flag Applied	Rationale
Accutest Job #FA20820: Continuing Calibration Verification GN64657-CCV3				
Nitrate	***112***	±10	J	%D greater than upper control limit

Corrective Action: When the %D was greater than the upper control limit, the results are considered estimated (may be biased high) and "J" flags were deemed necessary. According to laboratory correspondence, there were integration issues isolated to a specific analyst associated with only the quality control samples associated with nitrate. The laboratory has taken corrective measures to prevent future issues. All field samples in this SDG were associated with this CCV.

NITROCELLULOSE

- There were no quality control exceedances for the nitrocellulose analyses.

The sample results included in Job No. FA20820/FA20820X are deemed 100% complete and acceptable for their intended use.

TABLE I

TABLE I
SUMMARY OF ANALYTES FAILING CRITERIA

RE: Accutest job FA20820 Reissue

Dear Ms. Raicevic,

During a recent Accutest Management initiated 3rd party data review, an issue was discovered with some Ion Chromatography (IC) data. Some anions in associated Quality Control (QC) samples (Calibration Checks and/or Blank Spikes) were incorrectly or inconsistently integrated. These integration issues were isolated to a specific analyst. Accutest Southeast performed a comprehensive review of all IC data reported by this analyst. As a result of this review it was determined that some IC data for this job needed to be footnoted. Since only QC samples were impacted by these integration issues (no sample results changed), only the potential uncertainty associated with a reported result is impacted.

Anions analyzed by Ion Chromatography via EPA 300 or SW846 9056A have method specified quality control limits of 90-110%. Revised quality control data for the samples in question had a maximum recovery of 112% for Nitrate. Footnote applied to fractions 1 through 5.

The final report for job number FA20820 has been edited to reflect these changes.

Accutest apologizes for any inconvenience this may have caused and has taken corrective measures to prevent future issues. Please feel free to contact us if we can be of further assistance.

Sincerely,

Rick Watkins
Laboratory Director
Accutest Laboratories, SE

Norm Farmer
Technical Director
Accutest Laboratories, SE

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20820

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 3:32:50 PM

5 Sample(s) were collected on 12/16/2014 and were received at Accutest SE on 12/17/2014 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of FA20820. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits in MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54390

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MS, FA20794-1MSD, FA20820-2DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25246

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. % RPD was within control limits in MS/MSD.

FA20794-1, 2, 3, 4 for Nitrogen, Nitrate: Associated CCV above upper control limits

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
XU854 MISSILE TEST STAND AREA MRS

Date(s) Sampled: December 17, 2014
Report Date: January 6, 2015
Job No.: FA20881 (Accutest), FA20881X (Empirical Laboratories)

SAMPLE IDs

SOIL:
FA20881-1, 1501006-01 (XU854ISK06A)
FA20881-3, 1501006-03 (XU854ISK06Z1)

FIELD DUPLICATES:
FA20881-2, 1501006-02 (XU854ISK06C) is a field duplicate sample for FA20881-1, 1501006-01 (XU854ISK06A).

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batches OP54435, GP25263: For explosives and nitrate, the lab performed matrix spike and matrix spike duplicate samples for field sample FA20881-1 (XU854ISK06A).
Batch OP54473: For perchlorate, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On December 17, 2014, two soil samples and one duplicate were collected from Site XU854 Missile Test Stand Area MRS, Holloman Air Force Base (AFB). The samples were analyzed for perchlorate by Method 6850, explosives by Method 8330B, and nitrate nitrogen by Method 9056A by Accutest Laboratories. The samples were also sent to Empirical Laboratories, LLC through Accutest for Nitrocellulose analysis by Method E353.2(MOD).

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), XU853 Missile Test Stand Area MRS and XU854 Able 51 Area MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times, surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• Notes

PERCHLORATE

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

  The following table summarizes the RPDs/total differences of field duplicate sample set XU854ISK06A/ XU854ISK06A.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (µg/kg)	Field Dup Result (µg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
XU854ISK06A	XU854ISK06C	Perchlorate	16.4	13.1	2.0	22.4	None	RPD < 30%

Corrective Action: No qualifiers were applied since the RPD was within control limits.

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

NITRATE

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs/total differences of field duplicate sample set XU854ISK06A/ XU854ISK06A.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/kg)	Field Dup Result (mg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
XU854ISK06A	XU854ISK06C	Nitrate	4.1	4.1	1.0	0	None	RPD < 30%

Corrective Action: No qualifiers were applied since the RPD was within control limits.

- It is noted the following analytes exceeded recovery limits in the MS/MSD samples (parent sample XU854ISK06A).

MS/MSD Spike Results Job Number/Spike Analytes	MS %Rec	MSD %Rec	QC Limits (%)	RPD	Flag Applied	Rationale
Accutest Job #FA20881: Parent sample XU854ISK06A						
Nitrate	***86.7***	***86.3***	90-110	0.8	J	%Rec less than the lower control limit

Corrective Action: For parent sample XU854ISK06A, a "J" flag was applied since the recovery was less than the lower control limit. The qualifier was also applied to field duplicate sample XU854ISK06C.

NITROCELLULOSE

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs/total differences of field duplicate sample set XU854ISK06A/ XU854ISK06A.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (µg/kg)	Field Dup Result (µg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
XU854ISK06A	XU854ISK06C	Nitrocellulose	1.46 J	1.30 J	4.00	0.16	None	Total difference < 2x LOQ

Corrective Action: No qualifiers were applied since the total difference was within control limits.

The sample results included in Job No. FA20881/FA20881X are deemed 100% complete and acceptable for their intended use.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20881

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 9:06:14 PM

3 Sample(s) were collected on 12/17/2014 and were received at Accutest SE on 12/18/2014 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of FA20881. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits in MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54435

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MS, FA20881-1MSD, FA20937-1DUP were used as the QC samples indicated.
FA20881-3: All hits confirmed by reanalysis on a dissimilar column.

FA20881-3: Confirmation run.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25263

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MSD, FA20881-1MS were used as the QC samples for Nitrogen, Nitrate.

Matrix Spike Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity. % RPD was within control limits in MS/MSD.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Sample Delivery Group Case Narrative

Receipt Information:
The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:
This is an original submittal of the final report package.

Analytical Information:
All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:
No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

***:** Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

FIELD DUPLICATES:
There were no field duplicates collected in association with this analytical job.

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batches OP54773, OP54435, GP25263: For perchlorate, explosives, and nitrate, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On December 18, 2014, three soil samples were collected from Site XU854 Missile Test Stand Area MRS, Holloman Air Force Base (AFB). The samples were analyzed for perchlorate by Method 6850, explosives by Method 8330B, and nitrate nitrogen by Method 9056A by Accutest Laboratories. The samples were also sent to Empirical Laboratories, LLC through Accutest for Nitrocellulose analysis by Method E353.2(MOD).

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), XU853 Missile Test Stand Area MRS and XU854 Able 51 Area MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times, surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• Notes

PERCHLORATE

- There were no quality control exceedances for the explosives analyses.

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

NITRATE

- There were no quality control exceedances for the nitrate analyses.

NITROCELLULOSE

- There were no quality control exceedances for the nitrocellulose analyses.

The sample results included in Job No. FA20937/FA20937X are deemed 100% complete and acceptable for their intended use.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20937

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 9:05:14 PM

3 Sample(s) were collected on 12/18/2014 and were received at Accutest SE on 12/19/2014 properly preserved, at 3 Deg. C and intact. These Samples received an Accutest job number of FA20937. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits for MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54435

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MS, FA20881-1MSD, FA20937-1DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25263

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MSD, FA20881-1MS were used as the QC samples for Nitrogen, Nitrate.

Matrix Spike Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity. % RPD was within control limits for MS/MSD.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Sample Delivery Group Case Narrative

Receipt Information:
The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:
This is an original submittal of the final report package.

Analytical Information:
All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:
No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

***:** Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
ML865/SR864

Date(s) Sampled: February 10, 2015
Report Date: February 25, 2015
Job No.: FA22032

SAMPLE IDs

SOIL:
FA22032-1 (ML865SOS10A1A)
FA22032-2 (SR864SOSDA2A)
FA22032-3 (SR864SOSG1A)
FA22032-4 (SR864SOSG2A)

FIELD DUPLICATES:
FA22032-5 (SR864SOSDA2C) is a field duplicate sample for FA22032-2 (SR864SOSDA2A).

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batch OP55030: For explosives, the lab performed matrix spike and matrix spike duplicate samples for FA22032-1.
Batch MP28549: For the metals analytical batches, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch. It should be noted that the laboratory inadvertently did not use samples SR864SOSG1S or SR864SOSG2D (FA22032-6 and -7, respectively) for MS/MSD analysis and were analyzed as normal samples. Since these are essentially duplicates of samples SR864SOSG1A (FA22032-3) and SR864SOSG2A (FA22032-4), respectively, but a field duplicate was already designated (SR864SOSDA2C [FA22032-5]), these results are not usable.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On February 10, 2015, four soil samples, one duplicate, and MS/MSD samples were collected from Sites ML865/SR864, Holloman Air Force Base (AFB). The samples were analyzed for explosives by Method 8330A, and metals by Method 6010C by Accutest Laboratories.

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), ML865 Ballistics Rain Field MRS and SR864 Poorman Range MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times,

surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• **Notes**

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

METALS

- According to the case narrative, the following samples were analyzed at initial dilution:

Sample	Analyte	Dilution
ML865SOS10A1A	Antimony, Chromium, Lead, Zinc	1:10
SR864SOSDA2A	Antimony, Chromium, Lead, Zinc	1:5
SR864SOSG1A	Antimony, Chromium, Lead, Zinc	1:10
SR864SOSG2A	Antimony, Chromium, Lead, Zinc	1:5
SR864SOSDA2C	Antimony, Chromium, Lead, Zinc	1:5
SR864SOSG1S	Antimony, Chromium, Lead, Zinc	1:10
SR864SOSG2D	Antimony, Chromium, Lead, Zinc	1:10

  The dilution results only are reported and are used in data verification as representing original results.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

  The following table summarizes the RPDs/total differences of field duplicate sample set SR854SOSDA2A/ SR864SOSDA2C.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/kg)	Field Dup Result (mg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
SR854SOSDA2A	SR854SOSDA2C	Aluminum	7,560	7,710	10	2.0	None	RPD < 30%

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/kg)	Field Dup Result (mg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
SR854SOSDA2A	SR854SOSDA2C	Chromium	8.5	8.7	2.5	0.2	None	Total difference < 2x LOQ
SR854SOSDA2A	SR854SOSDA2C	Copper	8.3	9.6	1.3	14.5	None	RPD < 30%
SR854SOSDA2A	SR854SOSDA2C	Iron	6,580	6,670	15	1.4	None	RPD < 30%
SR854SOSDA2A	SR854SOSDA2C	Lead	6.7	6.7	5.1	0	None	Total difference < 2x LOQ
SR854SOSDA2A	SR854SOSDA2C	Zinc	27.3	27.3	5.1	0	None	RPD < 30%

Corrective Action: No qualifiers were applied since the RPD or total difference was within control limits.

The sample results included in Job No. FA22032 are deemed 100% complete and acceptable for their intended use.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA22032

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 2/25/2015 2:42:32 PM

7 Sample(s) were collected on 02/10/2015 and were received at Accutest SE on 02/11/2015 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of FA22032. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GC By Method SW846 8330A

Matrix: SO **Batch ID:** OP55030

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22032-1MS, FA22032-1MSD were used as the QC samples indicated.

FA22032-1: Confirmation run.

FA22032-1: All hits confirmed by reanalysis on a dissimilar column.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28549

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22009-2DUP, FA22009-2MS, FA22009-2MSD, FA22009-2PS, FA22009-2SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Copper, Zinc are outside control limits for sample MP28549-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Copper are outside control limits for sample MP28549-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28549-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA22032-1 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Zinc: Elevated reporting limit(s) due to matrix interference.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28558

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22051-3DUP, FA22051-3MS, FA22051-3MSD, FA22051-3PS, FA22051-3SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Antimony, Iron are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Antimony, Iron are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Chromium, Copper, Iron, Zinc, Antimony are outside control limits for sample MP28558-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Antimony, Copper, Zinc are outside control limits for sample MP28558-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28558-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.
MP28558-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

FA22032-6 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Zinc: Elevated reporting limit(s) due to matrix interference.

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
ML865

Date(s) Sampled: January 16, 2015
Report Date: February 3, 2015
Job No.: FA21555

SAMPLE IDs

SOIL:
FA21555-1 (ML865SOFH588A)
FA21555-3 (ML865SOFI589A)
FA21555-5 (ML865SOFJ589A)
FA21555-6 (ML865SOFI590A)
FA21555-7 (ML865SOFB589A)
FA21555-9 (ML865SOFB588A)
FA21555-10 (ML865SOFA588A)
FA21555-11 (ML865SOFD589A)

FIELD DUPLICATES:
FA21555-8 (ML865SOFB589C) is a field duplicate sample for FA21555-7 (ML865SOFB589A).

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batch OP54769: For explosives, the lab performed matrix spike and matrix spike duplicate samples for FA21555-1.
Batch MP28478: For the metals analytical batches, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch. It should be noted that the laboratory inadvertently did not use samples ML865SOFH588S or ML865SOFI589D (FA21555-2 and -4, respectively) for MS/MSD analysis and were analyzed as normal samples. Since these are essentially duplicates of samples ML865SOFH588A (FA21555-1) and ML865OFI589A (FA21555-3), respectively, but a field duplicate was already designated (ML865SOFB589C [FA21555-8]), these results are not usable.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On January 16, 2015, eight soil samples, one field duplicate, and MS/MSD samples were collected from Site ML865, Holloman Air Force Base (AFB). The samples were analyzed for explosives by Method 8330A, and metals by Method 6010C by Accutest Laboratories.

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), ML865 Ballistics Rain Field MRS and SR864 Poorman Range MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times, surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• Notes

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

METALS

- According to the case narrative, the following samples were analyzed at initial dilution:

Sample	Analyte	Dilution
ML865SOFH588A	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFH588S	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFI589A	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFI589D	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFJ589A	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFI590A	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFB589A	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFB589C	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFB588A	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFA588A	Antimony, Chromium, Lead, Zinc	1:10
ML865SOFD589A	Antimony, Chromium, Lead, Zinc	1:10

  The dilution results only are reported and are used in data verification as representing original results.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample

must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs/total differences of field duplicate sample set ML865SOFB589A/ ML865OFB589C.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/kg)	Field Dup Result (mg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
ML865SOFB589A	ML865SOFB589C	Aluminum	4910	4070	11, 12	18.7	None	RPD < 30%
ML865SOFB589A	ML865SOFB589C	Chromium	5.6	4.6 J	5.6, 5.9	1.0	None	Total difference < 2x LOQ
ML865SOFB589A	ML865SOFB589C	Copper	6.5	5.8	1.4, 1.5	0.7	None	Total difference < 2x LOQ
ML865SOFB589A	ML865SOFB589C	Iron	4280	3580	17, 18	17.8	None	RPD < 30%
ML865SOFB589A	ML865SOFB589C	Lead	8.5 J	6.0 J	11, 12	2.5	None	Total difference < 2x LOQ
ML865SOFB589A	ML865SOFB589C	Zinc	20.3	15.4	11, 12	4.9	None	RPD < 30%

Corrective Action: "UJ" or "J" qualifiers, as appropriate, were applied to the results in the parent/field duplicate sample sets only for those analytes listed above.

- The sample results included in Job No. FA21555 are deemed 100% complete and acceptable for their intended use.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA21555

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 2/3/2015 3:46:40 PM

11 Sample(s) were collected on 01/16/2015 and were received at Accutest SE on 01/21/2015 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of FA21555. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GC By Method SW846 8330A

Matrix: SO **Batch ID:** OP54769

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA21555-1MS, FA21555-1MSD were used as the QC samples indicated.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28478

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA21510-1DUP, FA21510-1MS, FA21510-1MSD, FA21510-1PS, FA21510-1SDL were used as the QC samples for metals.

Matrix Spike /Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Aluminum, Chromium, Antimony, Zinc are outside control limits for sample MP28478-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Antimony, Copper, Zinc, Aluminum, Chromium, Iron are outside control limits for sample MP28478-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28478-D1 for Zinc: RPD acceptable due to low duplicate and sample concentrations.

MP28478-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

MP28478-SD1 for Chromium: Serial dilution indicates possible matrix interference.

MP28478-SD1 for Aluminum: Serial dilution indicates possible matrix interference.

MP28478-SD1 for Iron: Serial dilution indicates possible matrix interference.

MP28478-PS1 for Iron: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA21555-2 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-2 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-2 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-2 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-1 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-1 for Lead: Elevated reporting limit(s) due to matrix interference.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28478

FA21555-1 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-1 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Chromium: Elevated reporting limit(s) due to matrix interference.

Matrix: SO **Batch ID:** MP28497

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA21642-24DUP, FA21642-24MS, FA21642-24MSD, FA21642-24PS, FA21642-24SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Aluminum, Antimony, Lead are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Aluminum, Antimony, Chromium, Lead are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike/ Matrix Spike Duplicate Recovery(s) for Iron are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

RPD(s) for Duplicate for Aluminum, Chromium, Iron, Lead, Antimony are outside control limits for sample MP28497-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Zinc, Aluminum, Chromium, Iron are outside control limits for sample MP28497-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28497-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

MP28497-SD1 for Iron: Serial dilution indicates possible matrix interference.

MP28497-SD1 for Chromium: Serial dilution indicates possible matrix interference.

MP28497-SD1 for Aluminum: Serial dilution indicates possible matrix interference.

MP28497-PS1 for Iron: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP28497-PS1 for Zinc: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP28497-PS1 for Antimony: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP28497-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA21555-10 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-10 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-10 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-11 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-11 for Lead: Elevated reporting limit(s) due to matrix interference.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28497

FA21555-11 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-10 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-11 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Antimony: Elevated reporting limit(s) due to matrix interference.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN64940

Sample(s) FA21555-3DUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

DATA QUALITY EVALUATION (DQE)
Holloman Air Force Base
ML865/SR864

Date(s) Sampled: February 10, 2015
Report Date: February 25, 2015
Job No.: FA22032

SAMPLE IDs

SOIL:
FA22032-1 (ML865SOS10A1A)
FA22032-2 (SR864SOSDA2A)
FA22032-3 (SR864SOSG1A)
FA22032-4 (SR864SOSG2A)

FIELD DUPLICATES:
FA22032-5 (SR864SOSDA2C) is a field duplicate sample for FA22032-2 (SR864SOSDA2A).

MATRIX SPIKE/MATRIX SPIKE DUPLICATES (MS/MSD):
Batch OP55030: For explosives, the lab performed matrix spike and matrix spike duplicate samples for FA22032-1.
Batch MP28549: For the metals analytical batches, the laboratory used internal quality control samples. Since these samples were not requested FPM in the chain-of-custody, no action was taken for the MS/MSD criterion. Also, since the matrix of these samples may or may not be the same as field samples, no flagging was deemed appropriate for field samples in the same batch. It should be noted that the laboratory inadvertently did not use samples SR864SOSG1S or SR864SOSG2D (FA22032-6 and -7, respectively) for MS/MSD analysis and were analyzed as normal samples. Since these are essentially duplicates of samples SR864SOSG1A (FA22032-3) and SR864SOSG2A (FA22032-4), respectively, but a field duplicate was already designated (SR864SOSDA2C [FA22032-5]), these results are not usable.

BLANKS:
There were no blanks collected in association with this laboratory job.

OVERVIEW:
On February 10, 2015, four soil samples, one duplicate, and MS/MSD samples were collected from Sites ML865/SR864, Holloman Air Force Base (AFB). The samples were analyzed for explosives by Method 8330A, and metals by Method 6010C by Accutest Laboratories.

The samples were assessed based on the criteria specified in the Uniform Federal Policy *Quality Assurance Project Plan (UFP-QAPP), ML865 Ballistics Rain Field MRS and SR864 Poorman Range MRS, Holloman AFB, NM* (FPM, 2014), in conjunction with the Air Force Center for Engineering and the DoD Quality Systems Manual (QSM) Version 4.2, October 2010, and internal laboratory quality control (QC) criteria. Parameters evaluated included holding times,

surrogates, laboratory control samples, initial and continuing calibration blanks, method blanks, field blanks, MS/MSD analysis, and initial and continuing calibration.

Table I presents the QC requirements and the criteria, the analytes that failed the criteria, result and analysis flags, and the data to which the flags are applied. Special notes applicable to specific quality control requirements are summarized below.

SUMMARY

• **Notes**

EXPLOSIVES

- There were no quality control exceedances for the explosives analyses.

METALS

- According to the case narrative, the following samples were analyzed at initial dilution:

Sample	Analyte	Dilution
ML865SOS10A1A	Antimony, Chromium, Lead, Zinc	1:10
SR864SOSDA2A	Antimony, Chromium, Lead, Zinc	1:5
SR864SOSG1A	Antimony, Chromium, Lead, Zinc	1:10
SR864SOSG2A	Antimony, Chromium, Lead, Zinc	1:5
SR864SOSDA2C	Antimony, Chromium, Lead, Zinc	1:5
SR864SOSG1S	Antimony, Chromium, Lead, Zinc	1:10
SR864SOSG2D	Antimony, Chromium, Lead, Zinc	1:10

  The dilution results only are reported and are used in data verification as representing original results.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (30% for soil samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

  The following table summarizes the RPDs/total differences of field duplicate sample set SR854SOSDA2A/ SR864SOSDA2C.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/kg)	Field Dup Result (mg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
SR854SOSDA2A	SR854SOSDA2C	Aluminum	7,560	7,710	10	2.0	None	RPD < 30%

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/kg)	Field Dup Result (mg/kg)	LOQ	RPD or ±difference	Flag Applied	Rationale
SR854SOSDA2A	SR854SOSDA2C	Chromium	8.5	8.7	2.5	0.2	None	Total difference < 2x LOQ
SR854SOSDA2A	SR854SOSDA2C	Copper	8.3	9.6	1.3	14.5	None	RPD < 30%
SR854SOSDA2A	SR854SOSDA2C	Iron	6,580	6,670	15	1.4	None	RPD < 30%
SR854SOSDA2A	SR854SOSDA2C	Lead	6.7	6.7	5.1	0	None	Total difference < 2x LOQ
SR854SOSDA2A	SR854SOSDA2C	Zinc	27.3	27.3	5.1	0	None	RPD < 30%

Corrective Action: No qualifiers were applied since the RPD or total difference was within control limits.

The sample results included in Job No. FA22032 are deemed 100% complete and acceptable for their intended use.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA22032

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 2/25/2015 2:42:32 PM

7 Sample(s) were collected on 02/10/2015 and were received at Accutest SE on 02/11/2015 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of FA22032. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GC By Method SW846 8330A

Matrix: SO **Batch ID:** OP55030

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22032-1MS, FA22032-1MSD were used as the QC samples indicated.

FA22032-1: Confirmation run.

FA22032-1: All hits confirmed by reanalysis on a dissimilar column.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28549

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22009-2DUP, FA22009-2MS, FA22009-2MSD, FA22009-2PS, FA22009-2SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Copper, Zinc are outside control limits for sample MP28549-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Copper are outside control limits for sample MP28549-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28549-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA22032-1 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Zinc: Elevated reporting limit(s) due to matrix interference.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28558

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22051-3DUP, FA22051-3MS, FA22051-3MSD, FA22051-3PS, FA22051-3SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Antimony, Iron are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Antimony, Iron are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Chromium, Copper, Iron, Zinc, Antimony are outside control limits for sample MP28558-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Antimony, Copper, Zinc are outside control limits for sample MP28558-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28558-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.
MP28558-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

FA22032-6 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Zinc: Elevated reporting limit(s) due to matrix interference.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN65164

Sample(s) FA22032-1DUP was used as the QC samples for Solids, Percent.

Matrix: SO **Batch ID:** GN65196

Sample(s) FA22022-3DUP was used as the QC samples for Solids, Percent.

Matrix: SO **Batch ID:** GN65197

Sample(s) FA22022-6DUP was used as the QC samples for Solids, Percent.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA21555

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 2/3/2015 3:46:40 PM

11 Sample(s) were collected on 01/16/2015 and were received at Accutest SE on 01/21/2015 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of FA21555. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GC By Method SW846 8330A

Matrix: SO **Batch ID:** OP54769

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA21555-1MS, FA21555-1MSD were used as the QC samples indicated.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28478

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA21510-1DUP, FA21510-1MS, FA21510-1MSD, FA21510-1PS, FA21510-1SDL were used as the QC samples for metals.

Matrix Spike /Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Aluminum, Chromium, Antimony, Zinc are outside control limits for sample MP28478-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Antimony, Copper, Zinc, Aluminum, Chromium, Iron are outside control limits for sample MP28478-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28478-D1 for Zinc: RPD acceptable due to low duplicate and sample concentrations.

MP28478-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

MP28478-SD1 for Chromium: Serial dilution indicates possible matrix interference.

MP28478-SD1 for Aluminum: Serial dilution indicates possible matrix interference.

MP28478-SD1 for Iron: Serial dilution indicates possible matrix interference.

MP28478-PS1 for Iron: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA21555-2 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-2 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-2 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-2 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-1 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-1 for Lead: Elevated reporting limit(s) due to matrix interference.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28478

FA21555-1 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-1 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-4 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-3 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-7 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-6 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-5 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-8 for Chromium: Elevated reporting limit(s) due to matrix interference.

Matrix: SO **Batch ID:** MP28497

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA21642-24DUP, FA21642-24MS, FA21642-24MSD, FA21642-24PS, FA21642-24SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Aluminum, Antimony, Lead are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Aluminum, Antimony, Chromium, Lead are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike/ Matrix Spike Duplicate Recovery(s) for Iron are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

RPD(s) for Duplicate for Aluminum, Chromium, Iron, Lead, Antimony are outside control limits for sample MP28497-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Zinc, Aluminum, Chromium, Iron are outside control limits for sample MP28497-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28497-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

MP28497-SD1 for Iron: Serial dilution indicates possible matrix interference.

MP28497-SD1 for Chromium: Serial dilution indicates possible matrix interference.

MP28497-SD1 for Aluminum: Serial dilution indicates possible matrix interference.

MP28497-PS1 for Iron: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP28497-PS1 for Zinc: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP28497-PS1 for Antimony: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP28497-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA21555-10 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-10 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-10 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-11 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-11 for Lead: Elevated reporting limit(s) due to matrix interference.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28497

FA21555-11 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-10 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Lead: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA21555-11 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA21555-9 for Antimony: Elevated reporting limit(s) due to matrix interference.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN64940

Sample(s) FA21555-3DUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Collected: 01/16/15

QC Sample ID	CAS#	Analyte	Sample Type	Result Type	Result	Units	Limits

(a) Spike recovery indicates possible matrix interference and/or sample non-homogeneity.
(b) High RPD due to possible sample non-homogeneity.
(c) RPD acceptable due to low duplicate and sample concentrations.
(d) Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

* Sample used for QC is not from job FA21555

Manual Integration Approval Summary

Sample Number: OP54769-MS
Lab FileID: BB045934.D
Injection Time: 02/02/15 19:11
Method: SW846 8330A
Analyst approved: 02/03/15 08:25 Kismet Lugo
Supervisor approved: 02/03/15 15:30 Mike Eger

Parameter	CAS	Sig#	R.T. (min.)	Reason
1,3-Dinitrobenzene	99-65-0	2	5.94	Poorly defined baseline
3,5-Dinitroaniline	618-87-1	2	6.41	Poorly defined baseline
Nitrobenzene	98-95-3	2	7.55	Poorly defined baseline
o-Nitrotoluene	88-72-2	2	14.53	Poorly defined baseline
m-Nitrotoluene	99-08-1	2	15.44	Poorly defined baseline

Manual Integrations APPROVED (compounds with "m" flag)
Mike Eger

Manual Integration Approval Summary

Sample Number: GBB1235-ICC1235 **Method:** SW846 8330A
Lab FileID: BB045818.D **Analyst approved:** 01/23/15 14:54 Kismet Lugo
Injection Time: 01/23/15 09:55 **Supervisor approved:** 01/26/15 09:40 Mike Eger

Parameter	CAS	Sig#	R.T. (min.)	Reason
o-Nitrotoluene	88-72-2	2	14.47	Poorly defined baseline
PETN	78-11-5	2	16.92	Poorly defined baseline

Manual Integrations APPROVED (compounds with "m" flag)
Mike Eger

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA22032

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 2/25/2015 2:42:32 PM

7 Sample(s) were collected on 02/10/2015 and were received at Accutest SE on 02/11/2015 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of FA22032. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GC By Method SW846 8330A

Matrix: SO **Batch ID:** OP55030

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22032-1MS, FA22032-1MSD were used as the QC samples indicated.

FA22032-1: Confirmation run.

FA22032-1: All hits confirmed by reanalysis on a dissimilar column.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28549

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22009-2DUP, FA22009-2MS, FA22009-2MSD, FA22009-2PS, FA22009-2SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Copper, Zinc are outside control limits for sample MP28549-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Copper are outside control limits for sample MP28549-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28549-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA22032-1 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-1 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-3 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-2 for Zinc: Elevated reporting limit(s) due to matrix interference.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP28558

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA22051-3DUP, FA22051-3MS, FA22051-3MSD, FA22051-3PS, FA22051-3SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Antimony, Iron are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

Matrix Spike Duplicate Recovery(s) for Antimony, Iron are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Chromium, Copper, Iron, Zinc, Antimony are outside control limits for sample MP28558-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Antimony, Copper, Zinc are outside control limits for sample MP28558-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

MP28558-PS1 for Aluminum: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.
MP28558-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

FA22032-6 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-6 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Lead: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Chromium: Elevated reporting limit(s) due to matrix interference.

FA22032-4 for Antimony: Elevated reporting limit(s) due to matrix interference.

FA22032-7 for Zinc: Elevated reporting limit(s) due to matrix interference.

FA22032-5 for Zinc: Elevated reporting limit(s) due to matrix interference.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN65164

Sample(s) FA22032-1DUP was used as the QC samples for Solids, Percent.

Matrix: SO **Batch ID:** GN65196

Sample(s) FA22022-3DUP was used as the QC samples for Solids, Percent.

Matrix: SO **Batch ID:** GN65197

Sample(s) FA22022-6DUP was used as the QC samples for Solids, Percent.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

(a) Spike recovery indicates possible matrix interference and/or sample non-homogeneity.
(b) RPD acceptable due to low duplicate and sample concentrations.
(c) High RPD due to possible sample non-homogeneity.

* Sample used for QC is not from job FA22032

Manual Integration Approval Summary

Sample Number: GBB1235-IC1235
Lab FileID: BB045820.D
Injection Time: 01/23/15 10:45
Method: SW846 8330A
Analyst approved: 01/23/15 14:54 Kismet Lugo
Supervisor approved: 01/26/15 09:40 Mike Eger

Parameter	CAS	Sig#	R.T. (min.)	Reason
3,5-Dinitroaniline	618-87-1	2	6.36	Poorly defined baseline
Nitrobenzene	98-95-3	2	7.51	Poorly defined baseline
o-Nitrotoluene	88-72-2	2	14.47	Poorly defined baseline
PETN	78-11-5	2	16.92	Poorly defined baseline

Manual Integrations APPROVED (compounds with "m" flag)
Mike Eger

* For NELAC purposes, Method 8332 includes analytes by SOP GC020

Manual Integration Rationale SOP QA029: **MP** Missed Peak, **OP** Overlapping Peak, **SP** Split Peak, **PDB** Poorly Defined Baseline, **BR** Baseline Ripple, **PII** Poor Instrument Integration

All strikeouts must be initialed and dated. If correction was not due to a transcription error, then list the reason for correction.
