Matrix:	Solid	Calibration Dates:	1/8/15 13:22	1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

Report Revision #: N/A
Revision Date: N/A
Total # of Pages: 40

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

L-A-B Accredited - Certificate Number L2226 - Testing

Sample Delivery Group Case Narrative

Receipt Information:

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

The following issues were discovered with the COC and/or samples upon log-in:

1. The client IDs on the container did not match the IDs on the COC. The client was contacted and indicated the IDs on the container are project name on COC and Accutest sample number.

Changes to the Revision:

This is an original submittal of the final report package.

Analytical Information:

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:

No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.

Mr. Rick D. Davis

Cooler Received/Opened On: 12/20/14 @0945 Workorder# 141222

1. Tracking # 5182 (last 4 digits, FedEx)

   Courier: FedEx

2. Temperature of rep. sample or temp blank when opened: 3.1 °C + correction factor(-0.3) = 3.1 °C

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...(NA)

4. Were custody seals on outside of cooler? (YES)...NO...NA

   If yes, how many and where: 1 on Front

5. Were the seals intact, signed, and dated correctly? (YES)...NO...NA

6. Were custody papers inside cooler? (YES)...NO...NA

   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 12/20/14

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

   Were these signed and dated correctly? YES...NO...(NA)

8. Packing material used? Bubblewrap (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: (Ice) Ice-pack Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA

12. Did all container labels and tags agree with custody papers? (YES)...NO...NA

13. a. Were VOA vials received? YES...(NO)...NA

    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO...(NA)

14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES...NO...(NA) Comments_____
    If multiple coolers, sequence #_____

    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) TH 12/23/14

15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...(NA)

    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO...(NA)

16. Was residual chlorine present? YES...NO...(NA)

    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) TH 12/23/14

17. Were custody papers properly filled out (ink, signed, etc)? (YES)...NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)...NO...NA

19. Were correct containers used for the analysis requested? (YES)...NO...NA If not, PM notified? YES...NO...(NA)

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA If not, PM notified? YES...NO...(NA)

21. Were there Non-Conformance issues at login? YES...(NO)...NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) TH 12/23/14

I certify that I attached a label with the unique LIMS number to each container (initial/date) TH 12/23/14

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) TH 12/23/14

22. Cooler Receipt Form Issues reviewed and communicated to PM? (YES)...NO...NA

23. Client and Project verified to match the COC/CRF in LIMS Project Screen? (YES)...NO...NA

24. Following items verified to items verified to match the COC/CRF in LIMS Receipt Screen:

a. Received Date/Received By (YES)...NO...NA

b. TAT (COC specified different?) (YES)...NO...NA

c. Shipping Container Temperatures (corrected temps) (YES)...NO ...NA

d. Condition Items (seals, intact, labels, preservation, ROI) (YES)...NO...NA

25. Following LIMS Sample Information verified against COC for each sample:

a. Name (YES)...NO...NA

b. QC Source YES...NO...(NA)

c. Matrix (YES)...NO...NA

d. Sample Type (YES)...NO...NA

e. Sampled Date/Time (Correct Time Zone) (YES)...NO...NA

f. Work Analyses/Versions (if applicable) YES...NO...(NA)

g. Sample Issues included in comments (limited volume, concentration warnings, etc.)? YES...NO...(NA)

h. Unpreserved VOA holding time set to 7 days? YES...NO...(NA)

26. Containers consistent with tests requested? (YES)...NO...NA

27. Field data entered and matching COC? (YES)...NO...NA

I certify that I have verified the LIMS data entry and answered questions 23-27 above (initial/date): AMO 12/23/14

Additional Details:

IDs on containers did not match IDs on COC. PM contacted client. IDs on containers are project name on COC + Accutest sample #, per client. AMO 12/23/14

III. EMPIRICAL LABORATORIES, LLC
DATA ENTRY VERIFICATION FORM – PROJECT MANAGEMENT

Workorder#: 1412221

	Verification Item	Yes	No	NA
1.	**Cooler Receipt Form Issues reviewed and communicated to client**			X
2.	**Element/ Project Screen/items verified to match the COC/CRF:**			
a.	**Client/Project**	X		
b.	Comments requiring laboratory reminder?			X
c.	Client and/or Project Memo requiring laboratory reminder?			X
3.	**Receipt Screen items verified to match the COC/CRF:**			
a.	Received Date/Received By	X		
b.	Workorder Due Date	X		
c.	Package Due Date	X		
d.	TAT	X		
e.	SDG Identifier Populated	X		
4.	**Sample Information verified against COC for each sample:**			
a.	Name	X		
b.	QC Source			X
c.	Matrix	X		
d.	Sample Type	X		
e.	Sampled Date/Time (Correct Time Zone)	X		
f.	Work Analyses/Versions	X		
g.	Sample Issues included in comments	X		
h.	Unpreserved VOA holding time set to 7 days			X
5.	**Containers consistent with tests requested**	X		
6.	**Field data entered and matching COC, if applicable**			X
	I certify that I have performed a second check of the LIMS information against the COC to confirm accuracy (initial/date):	12/23/2014

Matrix:	Solid	Calibration Dates:	1/8/15 13:22	1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

Revision Date: N/A
Total # of Pages: 41

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

L-A-B Accredited - Certificate Number L2226 - Testing

Sample Delivery Group Case Narrative

Receipt Information:

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:

This is an original submittal of the final report package.

Analytical Information:

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:

No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.

Mr. Rick D. Davis
Laboratory Technical Director / VP Operations

II. EMPIRICAL LABORATORIES
COOLER RECEIPT FORM

Cooler Received/Opened On: 12/30/14 @0900 Workorder# 1412230

1. Tracking # 5815 (last 4 digits, FedEx)

   Courier: FedEx

2. Temperature of rep. sample or temp blank when opened: 0.8 °C + correction factor(-0.0) = 0.8°C

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO..(NA)

4. Were custody seals on outside of cooler? (YES)..NO...NA

   If yes, how many and where: 2 - front

5. Were the seals intact, signed, and dated correctly? (YES)..NO...NA

6. Were custody papers inside cooler? (YES)..NO...NA

   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 12/30/14

7. Were custody seals on containers: YES (NO?) and Intact YES...NO..(NA)

   Were these signed and dated correctly? YES...NO..(NA)

8. Packing material used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice (Ice-pack) Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)..NO...NA

12. Did all container labels and tags agree with custody papers? (YES)..NO...NA

13. a. Were VOA vials received? YES..(NO)..NA

    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO...(NA)

14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES..(NO)..NA...Comments_____
    If multiple coolers, sequence #_____

    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) JTG 12/30/14

15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO..(NA)

    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO..(NA)

16. Was residual chlorine present? YES...NO..(NA)

    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) JTG 12/30/14

17. Were custody papers properly filled out (ink, signed, etc)? (YES)..NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)..NO...NA

19. Were correct containers used for the analysis requested? (YES)...NO...NA If not, PM notified? YES..(NO)..(NA) JTG 12/30/14

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA If not, PM notified? YES...NO..(NA)

21. Were there Non-Conformance issues at login? YES..(NO)..NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) JTG 12/30/14

I certify that I attached a label with the unique LIMS number to each container (initial/date) JTG 12/30/14

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) JTG 12/30/14

C:\Documents and Settings\jgross\Desktop\Cooler Receipt Updated 2014.doc

II. EMPIRICAL LABORATORIES
COOLER RECEIPT FORM (Continued)

LIMS Data Entry Second Check

Workorder# 1412230

22. Cooler Receipt Form Issues reviewed and communicated to PM? YES...NO...NA

23. Client and Project verified to match the COC/CRF in LIMS Project Screen? YES...NO...NA

24. Following items verified to items verified to match the COC/CRF in LIMS Receipt Screen:

a. Received Date/Received By YES...NO...NA

b. TAT (COC specified different?) YES...NO...NA

c. Shipping Container Temperatures (corrected temps) YES...NO ...NA

d. Condition Items (seals, intact, labels, preservation, ROI) YES...NO...NA

25. Following LIMS Sample Information verified against COC for each sample:

a. Name YES...NO...NA

b. QC Source YES...NO...NA

c. Matrix YES...NO...NA

d. Sample Type YES...NO...NA

e. Sampled Date/Time (Correct Time Zone) YES...NO...NA

f. Work Analyses/Versions (if applicable) YES...NO...NA

g. Sample Issues included in comments (limited volume, concentration warnings, etc.)? YES...NO...NA

h. Unpreserved VOA holding time set to 7 days? YES...NO...NA

26. Containers consistent with tests requested? YES...NO...NA

27. Field data entered and matching COC? YES...NO...NA

I certify that I have verified the LIMS data entry and answered questions 23-27 above (initial/date): _____.

Client:	Accutest Laboratories	Project:	Nitrocellulose	
Calibration:	5009003	Instrument:	WC-Lachat	
Matrix:	Solid	Calibration Dates:	1/8/15 13:22	1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

Report Revision #: N/A
Revision Date: N/A
Total # of Pages: 42

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

L-A-B Accredited - Certificate Number L2226 - Testing

Sample Delivery Group Case Narrative

Receipt Information:

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:

This is an original submittal of the final report package.

Analytical Information:

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:

No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.

Mr. Rick D. Davis

1. Tracking # 5815 (last 4 digits, FedEx)

   Courier: FedEx

2. Temperature of rep. sample or temp blank when opened: 0.8 °C + correction factor(-0.0) = 0.8°C

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO..(NA)

4. Were custody seals on outside of cooler? (YES)..NO...NA

   If yes, how many and where: 2 - front

5. Were the seals intact, signed, and dated correctly? (YES)..NO...NA

6. Were custody papers inside cooler? (YES)..NO...NA

   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 12/30/14

7. Were custody seals on containers: YES (NO) and Intact YES...NO..(NA)

   Were these signed and dated correctly? YES...NO..(NA)

8. Packing material used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice (Ice-pack) Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA

12. Did all container labels and tags agree with custody papers? (YES)..NO...NA

13. a. Were VOA vials received? YES..(NO)..NA

    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO..(NA)

14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES..(NO)..NA...Comments_____
    If multiple coolers, sequence # —

    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) JTG 12/30/14

15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO..(NA)

    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO..(NA)

16. Was residual chlorine present? YES...NO..(NA)

    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) JTG 12/30/14

17. Were custody papers properly filled out (ink, signed, etc)? (YES)..NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)..NO...NA

19. Were correct containers used for the analysis requested? (YES)..NO...NA If not, PM notified? YES...NO..(NA)

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA If not, PM notified? YES...NO..(NA)

21. Were there Non-Conformance issues at login? YES..(NO)...NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) JTG 12/30/14

I certify that I attached a label with the unique LIMS number to each container (initial/date) JTG 12/30/14

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) JTG 12/30/14

C:\Documents and Settings\jgross\Desktop\Cooler Receipt Updated 2014.doc

II. EMPIRICAL LABORATORIES
COOLER RECEIPT FORM (Continued)

LIMS Data Entry Second Check

Workorder# 1412231

22. Cooler Receipt Form issues reviewed and communicated to PM? YES...NO...NA

23. Client and Project verified to match the COC/CRF in LIMS Project Screen? YES...NO...NA

24. Following items verified to items verified to match the COC/CRF in LIMS Receipt Screen:

- a. Received Date/Received By YES...NO...NA
- b. TAT (COC specified different?) YES...NO...NA
- c. Shipping Container Temperatures (corrected temps) YES...NO ...NA
- d. Condition Items (seals, intact, labels, preservation, ROI) YES...NO...NA

25. Following LIMS Sample Information verified against COC for each sample:

- a. Name YES...NO...NA
- b. QC Source YES...NO...NA
- c. Matrix YES...NO...NA
- d. Sample Type YES...NO...NA
- e. Sampled Date/Time (Correct Time Zone) YES...NO...NA
- f. Work Analyses/Versions (if applicable) YES...NO...NA
- g. Sample Issues included in comments (limited volume, concentration warnings, etc.)? YES...NO...NA
- h. Unpreserved VOA holding time set to 7 days? YES...NO...NA

26. Containers consistent with tests requested? YES...NO...NA

27. Field data entered and matching COC? YES...NO...NA

I certify that I have verified the LIMS data entry and answered questions 23-27 above (initial/date): _____

Additional Details:

DATA ENTRY VERIFICATION FORM – PROJECT MANAGEMENT

Workorder#: 1412231

	Verification Item	Yes	No	NA
1.	**Cooler Receipt Form Issues reviewed and communicated to client**			X
2.	**Element/ Project Screen/items verified to match the COC/CRF:**			
a.	**Client/Project**	X		
b.	Comments requiring laboratory reminder?			X
c.	Client and/or Project Memo requiring laboratory reminder?			X
3.	**Receipt Screen items verified to match the COC/CRF:**			
a.	Received Date/Received By	X		
b.	Workorder Due Date	X		
c.	Package Due Date	X		
d.	TAT	X		
e.	SDG Identifier Populated	X		
4.	**Sample Information verified against COC for each sample:**			
a.	Name	X		
b.	QC Source			X
c.	Matrix	X		
d.	Sample Type	X		
e.	Sampled Date/Time (Correct Time Zone)	X		
f.	Work Analyses/Versions	X		
g.	Sample Issues included in comments	X		
h.	Unpreserved VOA holding time set to 7 days			X
5.	**Containers consistent with tests requested**	X		
6.	**Field data entered and matching COC, if applicable**			X
	I certify that I have performed a second check of the LIMS information against the COC to confirm accuracy (initial/date):	 12/31/2014

Client:	Accutest Laboratories	Project:	Nitrocellulose	
Calibration:	5009003	Instrument:	WC-Lachat	
Matrix:	Solid	Calibration Dates:	1/8/15 13:22	1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

Original Report Date: January 13, 2015
Report Revision #: N/A
Revision Date: N/A
Total # of Pages: 39

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

L-A-B Accredited - Certificate Number L2226 - Testing

Sample Delivery Group Case Narrative

Receipt Information:

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:

This is an original submittal of the final report package.

Analytical Information:

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:

No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.

Mr. Rick D. Davis
Laboratory Technical Director / VP Operations

II. EMPIRICAL LABORATORIES
COOLER RECEIPT FORM

Cooler Received/Opened On: 01/06/15 @ 0915 Work Order: 1501006

1. Tracking # 5962 (last 4 digits, FedEx)

   Courier: Fedex

2. Temperature of rep. sample or temp blank when opened: 4.6 °C + correction factor(-0.0) = 4.6 °C

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO..(NA)

4. Were custody seals on outside of cooler? (YES)..NO...NA

   If yes, how many and where: 1 on front

5. Were the seals intact, signed, and dated correctly? (YES)..NO...NA

6. Were custody papers inside cooler? (YES)..NO...NA

   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 1/6/15

7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)

   Were these signed and dated correctly? YES...NO..(NA)

8. Packing material used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice (Ice-pack) Ice (direct contact) Dry Ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)..NO...NA

12. Did all container labels and tags agree with custody papers? (YES)..NO...NA

13. a. Were VOA vials received? YES...(NO)..NA

    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO..(NA)

14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES..(NO)..NA...Comments_____
    If multiple coolers, sequence #_____

    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) JTG 1/6/15

15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO..(NA)

    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO..(NA)

16. Was residual chlorine present? YES...NO..(NA)

    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) JTG 1/6/15

17. Were custody papers properly filled out (ink, signed, etc)? (YES)..NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)..NO...NA

19. Were correct containers used for the analysis requested? (YES)..NO...NA If not, PM notified? YES...NO..(NA)

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA If not, PM notified? YES...NO..(NA)

21. Were there Non-Conformance issues at login? YES..(NO)..NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) JTG 1/6/15

I certify that I attached a label with the unique LIMS number to each container (initial/date) JTG 1/6/15

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) JTG 1/6/15

Client:	Accutest Laboratories	Project:	Nitrocellulose	
Calibration:	5009003	Instrument:	WC-Lachat	
Matrix:	Solid	Calibration Dates:	1/8/15 13:22	1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

Report Revision #: N/A
Revision Date: N/A
Total # of Pages: 41

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

L-A-B Accredited - Certificate Number L2226 - Testing

Sample Delivery Group Case Narrative

Receipt Information:

The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:

This is an original submittal of the final report package.

Analytical Information:

All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:

No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.

Mr. Rick D. Davis
Laboratory Technical Director / VP Operations

II. EMPIRICAL LABORATORIES
COOLER RECEIPT FORM

Cooler Received/Opened On: 01/06/15 @ 0915 Work Order: 1501005

1. Tracking # 5962 (last 4 digits, FedEx)

   Courier: Fedex

2. Temperature of rep. sample or temp blank when opened: 4.6 °C + correction factor(-0.0) = 4.6 °C

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO..(NA)

4. Were custody seals on outside of cooler? (YES)..NO...NA

   If yes, how many and where: 1 on front

5. Were the seals intact, signed, and dated correctly? (YES)..NO...NA

6. Were custody papers inside cooler? (YES)..NO...NA

   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 1/6/15

7. Were custody seals on containers: YES (NO) and Intact YES...NO..(NA)

   Were these signed and dated correctly? YES...NO..(NA)

8. Packing material used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice (Ice-pack) Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)...NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)..NO...NA

12. Did all container labels and tags agree with custody papers? (YES)..NO...NA

13. a. Were VOA vials received? YES..(NO)..NA

    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO..(NA)

14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES..(NO)..NA...Comments_____
    If multiple coolers, sequence #____

    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) JTG 1/6/15 1/6/15

15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO..(NA)

    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO..(NA)

16. Was residual chlorine present? YES...NO..(NA)

    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) JTG 1/6/15

17. Were custody papers properly filled out (ink, signed, etc)? (YES)..NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)..NO...NA

19. Were correct containers used for the analysis requested? (YES)..NO...NA If not, PM notified? YES...NO..(NA)

20. Was sufficient amount of sample sent in each container? (YES)..NO...NA If not, PM notified? YES...NO..(NA)

21. Were there Non-Conformance issues at login? YES..(NO)..NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) JTG 1/6/15

I certify that I attached a label with the unique LIMS number to each container (initial/date) JTG 1/6/15

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) JTG 1/6/15

Client:	Accutest Laboratories	Project:	Nitrocellulose	
Calibration:	5009003	Instrument:	WC-Lachat	
Matrix:	Solid	Calibration Dates:	1/8/15 13:22	1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

FA20579-3	12/09/14	13:03	MS	12/10/14	SO	Soil	XU854ISH06D
FA20579-4	12/09/14	13:03	MS	12/10/14	SO	Soil	XU854ISH06C

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20579

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date** 12/29/2014 11:28:01

4 Samples were collected on 12/09/2014 and were received at Accutest on 12/10/2014 properly preserved, at 2.6 Deg. C and intact. These Samples received an Accutest job number of FA20579. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54351

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-3MSD, FA20723-3MS were used as the QC samples indicated.

Matrix Spike Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in clean matix refer to Blank Spike.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54324

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20579-1MS, FA20579-1MSD, FA20723-1DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25228

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-1MSD, FA20723-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. For method performance in clean matrix refer to Blank Spike.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

Sample Summary

FPM Remediations

Job No: FA20723

HM-AZ PBR Holloman AFB; Alamogordo, NM
Project No: 1029-13-01-H-X0853

Sample Number	Collected Date	Time	By	Received	Matrix Code	Type	Client Sample ID
FA20723-1	12/11/14	10:02	MS	12/12/14	SO	Soil	XU854ISH0621
FA20723-2	12/11/14	11:36	MS	12/12/14	SO	Soil	XU854ISH0622
FA20723-3	12/11/14	13:40	MS	12/12/14	SO	Soil	XU854ISH0623

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20723

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date** 12/29/2014 11:34:17

3 Samples were collected on 12/11/2014 and were received at Accutest on 12/12/2014 properly preserved, at 3 Deg. C and intact. These Samples received an Accutest job number of FA20723. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54351

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-3MSD, FA20723-3MS were used as the QC samples indicated.

Matrix Spike Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in clean matrix refer to Blank Spike.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54324

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20579-1MS, FA20579-1MSD, FA20723-1DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25228

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20723-1MSD, FA20723-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. For metod performance in clean matrix refer to Blank Spike.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used

OP54351-MS	30468	4.75
OP54351-MSD	32871	4.75

IS 1 = Cl18O4 (ISTD)

(a) Initial Cal is: SQ295-ICC295 Q9302.D 12/26/14 09:48. Area is AVERAGE of initial cal points.
(b) Check Std Limit = -50 to + 50% of initial cal area.
(c) Upper Limit = + 50% of initial standard area; Retention time + 2 minutes of check standard.
(d) Lower Limit = -50% of initial standard area; Retention time -2 minutes of check standard.

Cl18O4

Manual Integration Approval Summary

Sample Number:	SQ295-IC295	**Method:**	SW846 6850
Lab FileID:	Q9300.D	**Analyst approved:**	12/26/14 14:09 Nancy Saunders
Injection Time:	12/26/14 09:31	**Supervisor approved:**	12/26/14 15:10 Mike Eger

Parameter	CAS	Sig#	R.T. (min.)	Reason
Perchlorate	14797-73-0		4.92	Poor instrument integration

Quantitative Analysis Report for Perchlorate by 6850

Title : Explosives by 8330A,8330B,8332
Last Update : Fri Dec 26 07:16:40 2014
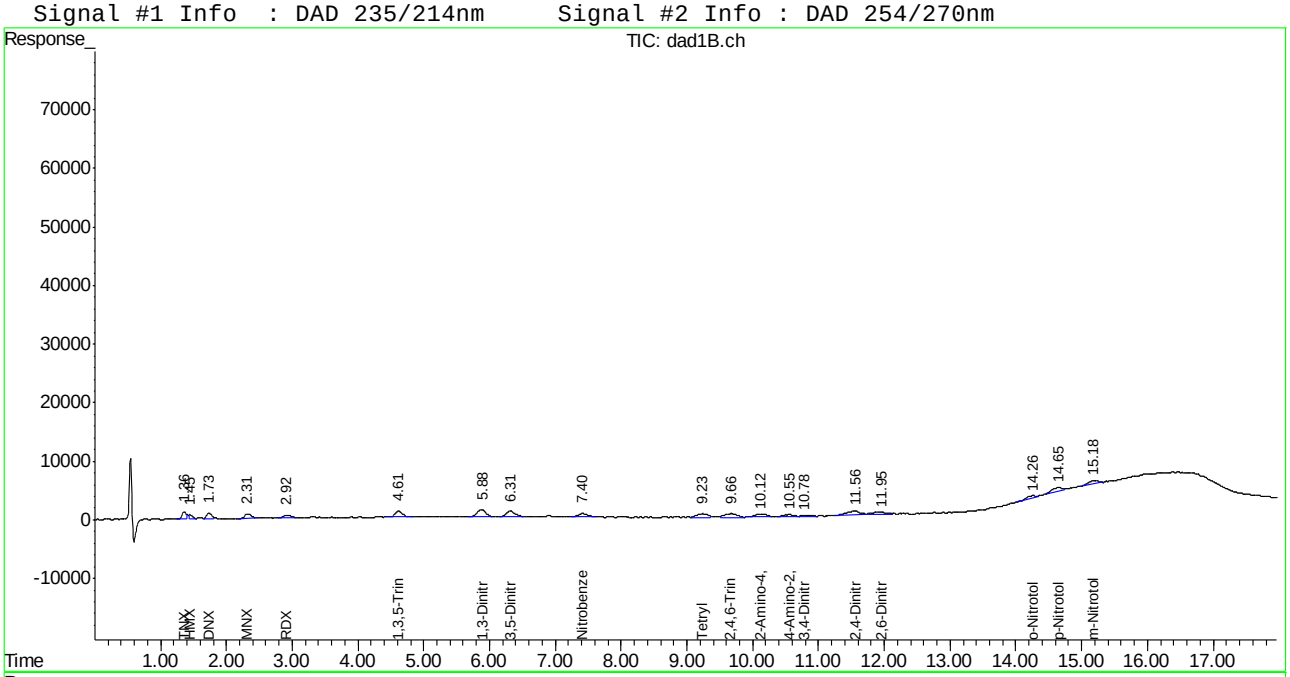
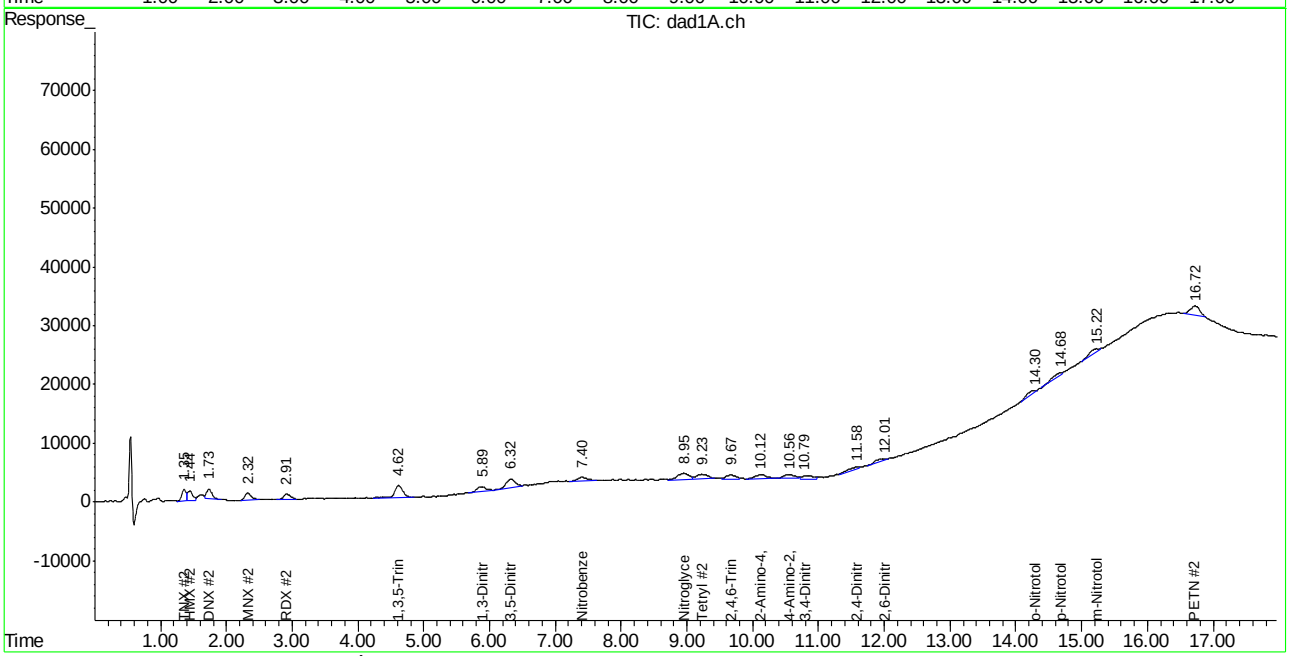
Response via : Multiple Level Calibration
DataAcq Meth : 8330B.M

Volume Inj. : 100ul
Signal #1 Phase : Extend C-18 Signal #2 Phase: Extend C-18
Signal #1 Info : DAD 235/214nm Signal #2 Info : DAD 254/270nm





Manual Integration Approval Summary

Sample Number: GBB1219-IC1219 **Method:** SW846 8330A
Lab FileID: BB045278.D **Analyst approved:** 12/26/14 11:46 Kismet Lugo
Injection Time: 12/24/14 14:10 **Supervisor approved:** 12/26/14 15:00 Mike Eger

Parameter	CAS	Sig#	R.T. (min.)	Reason
TNX		1	1.36	Poorly defined baseline
HMX	2691-41-0	1	1.44	Poorly defined baseline
3,5-Dinitroaniline	618-87-1	2	6.31	Poorly defined baseline
Nitrobenzene	98-95-3	2	7.41	Poorly defined baseline
o-Nitrotoluene	88-72-2	2	14.22	Poorly defined baseline
PETN	78-11-5	2	16.74	Poorly defined baseline

BB045279.D

Manual Integrations APPROVED (compounds with "m" flag)

Mike Eger 12/26/14 15:00

QC Data Summaries

Includes the following where applicable:

- Method Blank and Blank Spike Summaries
- Duplicate Summaries
- Matrix Spike Summaries
- Instrument Runlogs/QC

METHOD BLANK AND SPIKE RESULTS SUMMARY
GENERAL CHEMISTRY

Login Number: FA20723
Account: FPMRNYR - FPM Remediations
Project: HM-AZ PBR Holloman AFB; Alamogordo, NM

Analyte	Batch ID	RL	MB Result	Units	Spike Amount	BSP Result	BSP %Recov	QC Limits
Nitrogen, Nitrate	GP25228/GN64610	1.0	0.0	mg/kg	25	24.9	99.8	90-110%

Associated Samples:
Batch GP25228: FA20723-1, FA20723-2, FA20723-3
(*) Outside of QC limits

MATRIX SPIKE RESULTS SUMMARY
GENERAL CHEMISTRY

Login Number: FA20723
Account: FPMRNYR - FPM Remediations
Project: HM-AZ PBR Holloman AFB; Alamogordo, NM

Analyte	Batch ID	QC Sample	Units	Original Result	Spike Amount	MS Result	%Rec	QC Limits
Nitrogen, Nitrate	GP25228/GN64610	FA20723-1	mg/kg	15.0	25	54.7	159.0N(a)	90-110%

Associated Samples:
Batch GP25228: FA20723-1, FA20723-2, FA20723-3
(*) Outside of QC limits
(N) Matrix Spike Rec. outside of QC limits
(a) Spike recovery indicates possible matrix interference.

MATRIX SPIKE DUPLICATE RESULTS SUMMARY
GENERAL CHEMISTRY

Login Number: FA20723
Account: FPMRNYR - FPM Remediations
Project: HM-AZ PBR Holloman AFB; Alamogordo, NM

Analyte	Batch ID	QC Sample	Units	Original Result	Spike Amount	MSD Result	RPD	QC Limit
Nitrogen, Nitrate	GP25228/GN64610	FA20723-1	mg/kg	15.0	25	53.3	2.6	20%

Associated Samples:
Batch GP25228: FA20723-1, FA20723-2, FA20723-3
(*) Outside of QC limits
(N) Matrix Spike Rec. outside of QC limits

Technical Report for

FPM Remediations

HM-AZ PBR Holloman AFB; Alamogordo, NM

1029-13-01-H-X0853

Accutest Job Number: FA20794

Sampling Date: 12/15/14

Report to:

FPM Remediations

i.raicevic@fpm-remediations.com

ATTN: Ivana Raicevic

Total number of pages in report: **108**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Norm Farmer
Technical Director

Client Service contact: Jean Dent-Smith 407-425-6700

Certifications: FL (E83510), LA (03051), KS (E-10327), IA (366), IL (200063), NC (573), NJ (FL002), SC (96038001) DoD ELAP (L-A-B L2229), CA (2937), TX (T104704404), PA (68-03573), VA (460177), AK, AR, GA, KY, MA, NV, OK, UT, WA

RE: Accutest job FA21080 Reissue

Dear Ms. Raicevic,

During a recent Accutest Management initiated 3rd party data review, an issue was discovered with some Ion Chromatography (IC) data. Some anions in associated Quality Control (QC) samples (Calibration Checks and/or Blank Spikes) were incorrectly or inconsistently integrated. These integration issues were isolated to a specific analyst. Accutest Southeast performed a comprehensive review of all IC data reported by this analyst. As a result of this review it was determined that some IC data for this job needed to be footnoted. Since only QC samples were impacted by these integration issues (no sample results changed), only the potential uncertainty associated with a reported result is impacted.

Anions analyzed by Ion Chromatography via EPA 300 or SW846 9056A have method specified quality control limits of 90-110%. Revised quality control data for the samples in question had a maximum recovery of 110.4% for Nitrate. Footnote applied to fractions 1 through 11.

The final report for job number FA21080 has been edited to reflect these changes.

Accutest apologizes for any inconvenience this may have caused and has taken corrective measures to prevent future issues. Please feel free to contact us if we can be of further assistance.

Sincerely,

Rick Watkins
Laboratory Director
Accutest Laboratories, SE

Norm Farmer
Technical Director
Accutest Laboratories, SE

Sample Summary

FPM Remediations

Job No: FA20794

HM-AZ PBR Holloman AFB; Alamogordo, NM
Project No: 1029-13-01-H-X0853

Sample Number	Collected Date	Time	By	Received	Matrix Code	Type	Client Sample ID
FA20794-1	12/15/14	10:13	MS	12/16/14	SO	Soil	XU854ISG06A
FA20794-2	12/15/14	11:14	MS	12/16/14	SO	Soil	XU854ISN06A
FA20794-3	12/15/14	12:14	MS	12/16/14	SO	Soil	XU854ISO06A
FA20794-4	12/15/14	14:16	MS	12/16/14	SO	Soil	XU854ISI06A

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20794

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 3:32:23 PM

4 Sample(s) were collected on 12/15/2014 and were received at Accutest SE on 12/16/2014 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of FA20794. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits in MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54390

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MS, FA20794-1MSD, FA20820-2DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25246

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. % RPD was within control limits in MS/MSD.

FA20794-1, 2, 3, 4 for Nitrogen, Nitrate: Associated CCV above upper control limits

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Original Report Date: January 12, 2015
Report Revision #: N/A
Revision Date: N/A
Total # of Pages: 41

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

L-A-B Accredited - Certificate Number L2226 - Testing

Sample Delivery Group Case Narrative

Receipt Information:
The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:
This is an original submittal of the final report package.

Analytical Information:
All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:
No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

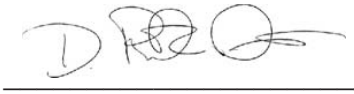
BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.



Mr. Rick D. Davis

COOLER RECEIPT FORM

Cooler Received/Opened On: 12/30/14 @0900 Workorder# 1412230

1. Tracking # 5815 (last 4 digits, FedEx)

   Courier: FedEx

2. Temperature of rep. sample or temp blank when opened: 0.8 °C + correction factor(-0.0) = 0.8°C

3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO..(NA)

4. Were custody seals on outside of cooler? (YES)..NO...NA

   If yes, how many and where: 2 - front

5. Were the seals intact, signed, and dated correctly? (YES)..NO...NA

6. Were custody papers inside cooler? (YES)..NO...NA

   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 12/30/14

7. Were custody seals on containers: YES (NO) and Intact YES...NO..(NA)

   Were these signed and dated correctly? YES...NO..(NA)

8. Packing material used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None

9. Cooling process: Ice (Ice-pack) Ice (direct contact) Dry ice Other None

10. Did all containers arrive in good condition (unbroken)? (YES)..NO...NA

11. Were all container labels complete (#, date, signed, pres., etc)? (YES)..NO...NA

12. Did all container labels and tags agree with custody papers? (YES)..NO...NA

13. a. Were VOA vials received? YES..(NO)..NA

    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO...(NA)

14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES..(NO)..NA...Comments_____
    If multiple coolers, sequence #_____

    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) JTG 12/30/14

15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO..(NA)

    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO..(NA)

16. Was residual chlorine present? YES...NO..(NA)

    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) JTG 12/30/14

17. Were custody papers properly filled out (ink, signed, etc)? (YES)..NO...NA

18. Did you sign the custody papers in the appropriate place? (YES)..NO...NA

19. Were correct containers used for the analysis requested? (YES)...NO...NA If not, PM notified? YES..(NO)..(NA) JTG 12/30/14

20. Was sufficient amount of sample sent in each container? (YES)...NO...NA If not, PM notified? YES...NO..(NA)

21. Were there Non-Conformance issues at login? YES..(NO)..NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) JTG 12/30/14

I certify that I attached a label with the unique LIMS number to each container (initial/date) JTG 12/30/14

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) JTG 12/30/14

Client:	Accutest Laboratories	Project:	Nitrocellulose
Calibration:	5009003	Instrument:	WC-Lachat
Matrix:	Solid	Calibration Dates:	1/8/15 13:22 1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

5

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

Nitrocellulose Analysis

1 2221-03 = (0.5792 x 0.2690) - 0.003013

= 0.1527918 mg/L x 1000 = 152.79 ug/L

x 0.025 = 3.819795 / 0.126

= 30.315833 / 10.26g = 2.955 Nitrocellulose ug/g

ACCUTEST LABORATORIES SAMPLE RECEIPT CONFIRMATION

ACCUTEST'S JOB NUMBER: FA20794 CLIENT: FPM PROJECT: NM-A2-PBR

DATE/TIME RECEIVED: 12-16-14 936 {MM/DD/YY 24:00} NUMBER OF COOLERS RECEIVED: 1

METHOD OF DELIVERY: (FEDEX) UPS ACCUTEST COURIER DELIVERY OTHER:

AIRBILL NUMBERS: 8066 1931 7020

COOLER INFORMATION

- [ ] CUSTODY SEAL NOT PRESENT OR NOT INTACT
- [ ] CHAIN OF CUSTODY NOT RECEIVED (COC)
- [ ] ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- [ ] SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- [ ] TEMPERATURE CRITERIA NOT MET

TEMPERATURE INFORMATION

- [ ] IR THERM ID 1 CORR. FACTOR +0.4
- [ ] OBSERVED TEMPS: 2.4
- [ ] CORRECTED TEMPS: 2.8

TRIP BLANK INFORMATION

- [ ] TRIP BLANK PROVIDED
- [x] TRIP BLANK NOT PROVIDED
- [x] TRIP BLANK NOT ON COC
- [ ] TRIP BLANK INTACT
- [ ] TRIP BLANK NOT INTACT
- [ ] RECEIVED WATER TRIP BLANK
- [ ] RECEIVED SOIL TRIP BLANK

SAMPLE INFORMATION

- [ ] INCORRECT NUMBER OF CONTAINERS USED
- [ ] SAMPLE RECEIVED IMPROPERLY PRESERVED
- [ ] INSUFFICIENT VOLUME FOR ANALYSIS
- [ ] DATES/TIMES ON COC DO NOT MATCH SAMPLE LABEL
- [ ] ID'S ON COC DO NOT MATCH LABEL
- [ ] VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- [ ] BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- [ ] NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- [ ] UNCLEAR FILTERING OR COMPOSITING INSTRUCTIONS
- [ ] SAMPLE CONTAINER(S) RECEIVED BROKEN
- [ ] 5035 FIELD KITS NOT RECEIVED WITHIN 48 HOURS
- [ ] BULK VOA SOIL JARS NOT RECEIVED WITHIN 48 HOURS
- [ ] % SOLIDS JAR NOT RECEIVED
- [ ] RESIDUAL CHLORINE PRESENT LOT#

{APPLICABLE TO EPA 600 SERIES OR NORTH CAROLINA ORGANICS}

MISC. INFORMATION

NUMBER OF ENCORES ? 25-GRAM 5-GRAM

NUMBER OF 5035 FIELD KITS ?

NUMBER OF LAB FILTERED METALS ?

pH PAPER LOT#s WIDE RANGE A036122 NARROW RANGE HC421754 OTHER (specify) 405-230010

RE: Accutest job FA20820 Reissue

Dear Ms. Raicevic,

During a recent Accutest Management initiated 3rd party data review, an issue was discovered with some Ion Chromatography (IC) data. Some anions in associated Quality Control (QC) samples (Calibration Checks and/or Blank Spikes) were incorrectly or inconsistently integrated. These integration issues were isolated to a specific analyst. Accutest Southeast performed a comprehensive review of all IC data reported by this analyst. As a result of this review it was determined that some IC data for this job needed to be footnoted. Since only QC samples were impacted by these integration issues (no sample results changed), only the potential uncertainty associated with a reported result is impacted.

Anions analyzed by Ion Chromatography via EPA 300 or SW846 9056A have method specified quality control limits of 90-110%. Revised quality control data for the samples in question had a maximum recovery of 112% for Nitrate. Footnote applied to fractions 1 through 5.

The final report for job number FA20820 has been edited to reflect these changes.

Accutest apologizes for any inconvenience this may have caused and has taken corrective measures to prevent future issues. Please feel free to contact us if we can be of further assistance.

Sincerely,

Rick Watkins
Laboratory Director
Accutest Laboratories, SE

Norm Farmer
Technical Director

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20820

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 3:32:50 PM

5 Sample(s) were collected on 12/16/2014 and were received at Accutest SE on 12/17/2014 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of FA20820. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits in MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54390

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MS, FA20794-1MSD, FA20820-2DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25246

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples for Nitrogen, Nitrate.

MS/MSD for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference. % RPD was within control limits in MS/MSD.

FA20794-1, 2, 3, 4 for Nitrogen, Nitrate: Associated CCV above upper control limits

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Report Revision #: N/A
Revision Date: N/A
Total # of Pages: 42

THIS DOCUMENT MEETS DoD QSM 4.2 STANDARDS

The results relate to only the samples associated with the referenced SDG and the submitted data has been produced in accordance with laboratory procedures. The Laboratory's Technical Lab Director, Mr. Rick Davis, is responsible for the final data produced and reported. His signature is listed at the end of the Case Narrative within the Analytical Data Package. If applicable to this report package, details on report revisions and the information on subcontracted analysis are listed in the package Case Narrative. This report shall not be reproduced, except in full, without the written approval of Empirical Laboratories, LLC.

Sample Delivery Group Case Narrative

Receipt Information:
The samples were received within the preservation guidelines for the associated methods. The information associated with sample receipt and the Sample Delivery Group (SDG) are included within section 4 of this package, which also provides information on the link between the client sample ID listed on the COC and laboratory's assigned unique sample ID or WorkOrder #. The sample is tracked through the laboratory for all analysis via the assigned WorkOrder #.

All samples that were received were analyzed and none of the samples were placed on hold without analyses. There were no subcontracted analyses for this SDG.

Changes to the Revision:
This is an original submittal of the final report package.

Analytical Information:
All samples were prepped (where applicable) and analyzed within the standard allowed holding times, unless noted within the exceptions listed below. The laboratory analyzed all samples within the program and method guidelines. Sample preparation and dilution information is provided within the final results report and at the beginning of each form set. The following information is provided specific to individual methods:

Nitrocellulose:
No anomalies or deviations are noted.

Data Qualifiers:

As applicable and where required, the following general qualifiers are associated with the sample results. Additional qualifiers will be specified within the reporting sections of the data package or within the body of the Case Narrative.

Analytical Report Terms and Qualifiers

DL: The detection limit (DL) is defined as the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The DL is supported by the method detection limit (MDL) which is determined from analysis of a sample containing the analyte in a given matrix.

LOD: The Limit of Detection is an estimate of the minimum amount of a substance that an analytical process can reliably detect. An LOD is analyte- and matrix-specific and may be laboratory-dependent. This definition is further clarified in the DoD QSM 4.2 revisions as the smallest amount or concentration of a substance that must be present in a sample in order to be detected at a high level of confidence (99%). At the LOD, the false negative rate (Type II error) is 1%.

LOQ: The Limit of Quantitation is the minimum level, concentration, or quantity of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. This term is further clarified within the DoD QSM 4.2 as the lowest concentration that produces a quantitative result within specified limits of precision and bias.

*****: Exceeding quality control criteria are associated with the reported result.

B: The presence of a "B" to the right of an analytical value indicates that this compound was also detected in the method blank and the data should be interpreted with caution. One should consider the possibility that the correct sample result might be less than the reported result and, perhaps, zero.

D: When a sample (or sample extract) is rerun diluted because one of the compound concentrations exceeded the highest concentration range for the standard curve, all of the values obtained in the dilution run will be flagged with a "D".

E: The concentration for any compound found which exceeds the highest concentration level on the standard curve for that compound will be flagged with an "E". Usually the sample will be rerun at a dilution to quantitate the flagged compound. For Metals, the qualifier indicates that the serial dilution was outside of the control limits and the compound should be considered estimated due to the presence of interference.

H1: The result was analyzed outside of the EPA recommended holding time.

H2: The result was extracted outside of the EPA recommended holding time.

H3: The sample for this analyte was received outside of the EPA recommended holding time.

J: The presence of a "J" to the right of an analytical result indicates that the reported result is estimated. The mass spectral data pass the identification criteria showing that the compound is present, but the calculated result is less than the LOQ. One should feel confident that the result is greater than zero and less than the LOQ.

M: Indicates that the sample matrix interfered with the quantitation of the analyte. In dual column analysis the result is reported from the column with the lower concentration. In inorganics, it indicates that the parameters DL/LOD/LOQ have been raised.

N: The MS/MSD accuracy and/or precision are outside criteria. The predigested spike recovery is not within control limits for the associated parameter.

P: The associated numerical value is an estimated quantity. There is greater than a 40% difference between the two GC columns for the detected concentrations. The higher of the two values is reported unless matrix interference is obvious or for HPLC analysis where the primary column is reported.

Q: The relative percent difference (RPD) and/or percent recovery exceeded limits in the associated Blank Spike and/or Blank Spike Duplicate.

S: The associated internal standard exceeded criteria.

U: The presence of a "U" indicates that the analyte was analyzed for but was not detected or the concentration of the analyte quantitated below the DL.

X: The parameter shows a potential positive bias on a reported concentration due to an ICV or CCV exceeding the upper control limit on the high side.

Y: The parameter shows a potential negative bias on a reported concentration due to an ICV or CCV exceeding the lower control limit on the low side.

Z: The parameter shows lack of confirmation/detection, which may be due to a negative bias in the ICV or CCV which exceeds the lower control limit.

Chromatographic Flags for Manual Integration:

The following letters are used to denote manual integrations on the laboratory's raw data in association with chromatographic integrations:

A: The peak was manually integrated as it was not integrated in the original chromatogram.

B: The peak was manually integrated due to resolution or coelution issues in the original chromatogram.

C: The peak was manually integrated to correct the baseline from the original chromatogram.

D: The peak was manually integrated to identify the correct peak as the wrong peak was identified in the original chromatogram.

E: The peak was manually integrated to include the entire peak as the original chromatogram only integrated part of the peak.

LIMS Definitions / Naming Conventions:

The following are general naming conventions that are used throughout the laboratory; however, on a method by method basis, there are additional QAQC items that are named in a consistent format.

BLK: LIMS assigns a unique identifier to the Method Blank by naming it as the letters BLK

appended to the Batch ID. A Method Blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The Method Blank is used to assess for possible contamination during preparation and/or analysis steps. Method Blanks within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally.

BS: LIMS assigns a unique identifier to the Blank Spike by naming it as the letters BS appended to the Batch ID. The Blank Spike or Lab Control Sample is a controlled analyte-free matrix, which is spiked with known and verified concentrations of target analytes. Spiking concentrations can be referenced in the method SOP. The BS is used to evaluate the viability of analytes taken through the entire prep (when applicable) and analytical process. Blank Spikes within a Batch or Analytical sequence will be appended with a numerical value beginning with 1 that will increase incrementally. A duplicate Blank Spike will be designated as a BSD.

MS: The LIMS assigns each Client sample with a unique identifier. The Matrix Spike is designated with a MS at the end of the sample's unique identifier. The Matrix Spike sample is used to assess the effect of the sample matrix on the precision and accuracy of the results generated using the selected method. A duplicate Matrix Spike will be designated as a MSD.

IDs: The LIMS assigns each Client sample with a unique identifier. The letter "RE" may potentially be appended to the end of the LIMS Sample ID. And "**RE"** implies that the sample was either re-prepped, re-analyzed straight, or re-analyzed at a dilution. Subsequent re-analysis for the sample will be appended with a numerical value beginning with 1 that will increase incrementally. Eg: RE1, RE2, RE3, etc.

Statement of Data Authenticity:

I certify that, based upon my inquiry of those individuals immediately responsible for obtaining the information and to the best of my knowledge, the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, with the exception of the conditions detailed in this Case Narrative, as verified by my signature below. During absences, the Data Quality Manager, Technical Directors or Project Managers are authorized to sign this Statement of Data Authenticity.

Mr. Rick D. Davis

COOLER RECEIPT FORM

Cooler Received/Opened On: 12/30/14 @0900 Workorder# 1412231

1. Tracking # 5815 (last 4 digits, FedEx)
   Courier: FedEx
2. Temperature of rep. sample or temp blank when opened: 0.8 °C + correction factor(-0.0) = 0.8 °C
3. If Item #2 temperature is 0°C or less, was the representative sample or temp blank frozen? YES NO...(NA)
4. Were custody seals on outside of cooler? (YES)..NO...NA
   If yes, how many and where: 2 - front
5. Were the seals intact, signed, and dated correctly? (YES)..NO...NA
6. Were custody papers inside cooler? (YES)..NO...NA
   I certify that I opened the cooler and answered questions 1-6 (initial/date) JTG 12/30/14
7. Were custody seals on containers: YES (NO) and Intact YES...NO...(NA)
   Were these signed and dated correctly? YES...NO...(NA)
8. Packing material used? (Bubblewrap) (Plastic bag) Peanuts Vermiculite Foam Insert Paper Other None
9. Cooling process: Ice (Ice-pack) Ice (direct contact) Dry ice Other None
10. Did all containers arrive in good condition (unbroken)? (YES)..NO...NA
11. Were all container labels complete (#, date, signed, pres., etc)? (YES)...NO...NA
12. Did all container labels and tags agree with custody papers? (YES)..NO...NA
13. a. Were VOA vials received? YES..(NO)..NA
    b. Was there observable headspace present in any VOA vial (>5mm-6mm)? YES...NO...(NA)
14. Was there a Trip Blank in this cooler (custody seals present/intact)? YES..(NO)..NA...Comments_____
    If multiple coolers, sequence #____
    I certify that I unloaded the cooler and answered questions 7-14 (initial/date) JTG 12/30/14
15. a. On pres'd bottles, did pH test strips suggest preservation reached the correct pH level? YES...NO...(NA)
    b. Did the bottle labels indicate that the correct preservatives were used? YES...NO...(NA)
16. Was residual chlorine present? YES...NO...(NA)
    I certify that I checked for chlorine and pH as per SOP and answered questions 15-16 (initial/date) JTG 12/30/14
17. Were custody papers properly filled out (ink, signed, etc)? (YES)..NO...NA
18. Did you sign the custody papers in the appropriate place? (YES)..NO...NA
19. Were correct containers used for the analysis requested? (YES)..NO...NA If not, PM notified? YES...NO...(NA)
20. Was sufficient amount of sample sent in each container? (YES)...NO...NA If not, PM notified? YES...NO...(NA)
21. Were there Non-Conformance issues at login? YES..(NO)...NCR#_____

I certify that I entered this project into LIMS and answered questions 17-21 (initial/date) JTG 12/30/14

I certify that I attached a label with the unique LIMS number to each container (initial/date) JTG 12/30/14

I certify that I notified the laboratory of any short holding time or RUSH parameters (initial/date) JTG 12/30/14

Client:	Accutest Laboratories	Project:	Nitrocellulose
Calibration:	5009003	Instrument:	WC-Lachat
Matrix:	Solid	Calibration Dates:	1/8/15 13:22 1/8/15 13:32

Compound	Mean RF	RF RSD	Mean RT	RT RSD	Linear r	Quad COD	LIMIT	Q
Nitrate/Nitrite as N	3.261833E-03	40.92995			0.9995953		0.99	

5

Per current DoD QSM requirements, effective 03/17/2014, Empirical has updated the linear calibration coefficient requirements to reflect a limit of 0.990 for "r2" rather than the previously reported limit of 0.995 for "r". The change in assessment criteria is consistent with regulatory requirements.

Nitrocellulose Analysis

1412221-03 = (0.5792 x 0.2690) - 0.003013

= 0.1527918 mg/L x 1000 = 152.79 ug/L

x 0.025 = 3.819795 / 0.126

= 30.315833 / 10.26g = 2.955 Nitrocellulose ug/g

Sample Summary

FPM Remediations

Job No: FA20881

HM-AZ PBR Holloman AFB; Alamogordo, NM
Project No: 1029-13-01-H-X0853

Sample Number	Collected Date	Time	By	Received	Matrix Code	Type	Client Sample ID
FA20881-1	12/17/14	13:40	MS	12/18/14	SO	Soil	XU854ISK06A
FA20881-2	12/17/14	13:40	MS	12/18/14	SO	Soil	XU854ISK06C
FA20881-3	12/17/14	14:30	MS	12/18/14	SO	Soil	XU854ISK06Z1

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20881

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 9:06:14 PM

3 Sample(s) were collected on 12/17/2014 and were received at Accutest SE on 12/18/2014 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of FA20881. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits in MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54435

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MS, FA20881-1MSD, FA20937-1DUP were used as the QC samples indicated.
FA20881-3: All hits confirmed by reanalysis on a dissimilar column.

FA20881-3: Confirmation run.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25263

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MSD, FA20881-1MS were used as the QC samples for Nitrogen, Nitrate.

Matrix Spike Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity. % RPD was within control limits in MS/MSD.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Sample Summary

FPM Remediations

Job No: FA20937

HM-AZ PBR Holloman AFB; Alamogordo, NM
Project No: 1029-13-01-H-X0853

Sample Number	Collected Date	Time	By	Received	Matrix Code	Type	Client Sample ID
FA20937-1	12/18/14	09:00	MS	12/19/14	SO	Soil	XU854ISK06Z2
FA20937-2	12/18/14	10:07	MS	12/19/14	SO	Soil	XU854ISK06Z3
FA20937-3	12/18/14	11:06	MS	12/19/14	SO	Soil	XU854ISM06A

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: FPM Remediations **Job No:** FA20937

Site: HM-AZ PBR Holloman AFB; Alamogordo, NM **Report Date:** 1/6/2015 9:05:14 PM

3 Sample(s) were collected on 12/18/2014 and were received at Accutest SE on 12/19/2014 properly preserved, at 3 Deg. C and intact. These Samples received an Accutest job number of FA20937. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Extractables by GCMS By Method SW846 6850

Matrix: SO **Batch ID:** OP54473

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20794-1MSD, FA20794-1MS were used as the QC samples indicated.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Perchlorate are outside control limits. Outside control limits due to high level in sample relative to spike amount. % RPD was within control limits for MS/MSD.

Extractables by GC By Method SW846 8330B

Matrix: SO **Batch ID:** OP54435

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MS, FA20881-1MSD, FA20937-1DUP were used as the QC samples indicated.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: SO **Batch ID:** GP25263

All samples were prepped within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA20881-1MSD, FA20881-1MS were used as the QC samples for Nitrogen, Nitrate.

Matrix Spike Recovery(s) for Nitrogen, Nitrate are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity. % RPD was within control limits for MS/MSD.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

MRS Background Information

Munitions Response Site Name: Able 51 Area

Component: Air Force

Installation/Property Name: HOLLOMAN AIR FORCE BASE

Location (City, County, State): Alamogordo, Otero County, NM

Site Name/Project name (Project No.): Able 51 Area

Date Information Entered\Updated: 4/10/2015 2:49:34 PM

Point of Contact Name: DeAnna Rothhaupt **Point of Contact Phone:** (575) 571-3931

Project Phase (check only one):

☐ PA	☐ SI	☑ RI	☐ FS	☐ RD
☐ RA	☐ RIP	☐ RC		

Media Evaluated (check all that apply):

☐ Groundwater	☐ Sediment (human receptor)
☑ Surface soil	☐ Surface Water (ecological receptor)
☐ Sediment (ecological receptor)	☐ Surface Water (human receptor)

MRS Summary:

MRS Description: Describe the munitions-related activities that occurred at the installation, the dates of operation, and the UXO, DMM, or MC known or suspected to be present. When possible, identify munitions, CWM, and MC by type:

The Able 51 Area (XU854) site is a 47.70-acre MRS that encompasses the 47.70-acre Able 51 Area MRA, MRA 854. The Able 51 Area MRA was designated the XU854 MRS at the conclusion of the CSE Phase II. The site is located south of the HSTT and southwest of the Jeep Target Area. The site lies just west of the Holloman AFB main installation boundary fence; however, the site is located on Holloman AFB property which is administered by the White Sands Missile Range.

Able 51 Area was used as a launch facility in the late 1950s and early 1960s for testing of Mace and Matador missiles. Also referred to as the Zero Length (ZEL) site or BQM-34A Drone Launch site, this area was also used for research on mobile launch capability of both manned and unmanned aircraft, using rocket boosters, without the need for prepared airfields. The Able 51 Area contains buildings 1440 and 1442 which are considered individually eligible for inclusion in the National Register of Historic Places (NRHP). Building 1440, completed in 1962 as a missile launch facility, was an observation blockhouse for Mace and Matador missiles and drone launches. Building 1442 was constructed in 1959 as a missile launch facility.

Small arms debris associated with recent training activities consisting of .22-caliber, 5.56mm, 7.62mm, .38-caliber, .45-caliber, and .50-caliber was encountered during the CSE Phase II and RI investigations. MD associated with 40mm flares, M74 airburst simulator, slap flares, and smoke grenades was observed on the surface during the CSE Phase II. MD associated with 40mm flares, M74 airburst simulator, slap flares, and smoke grenades was observed on the surface during the CSE Phase II. A negligible amount of MD (surface and subsurface) was discovered during the RI including 40mm cartridge, M18 smoke grenade (expended), 40mm casing, 40mm, flare pieces, and a grenade spoon.. The CSE Phase II and RI did not discover any evidence of formal small arms training (e.g., targets, berms, and firing positions). No MEC was encountered during the CSE Phase II or RI.

Description of Pathways for Human and Ecological Receptors:

MEC: Natural physical processes and human activities (intrusive and non-intrusive) for surface and subsurface MEC. Pathways for surface and subsurface MEC are incomplete for all receptors.

MC: No MEC presenting a potential source for MC was observed at the Able 51 Area during the CSE Phase II and RI, thus no MC soil sampling occurred during the CSE Phase II or RI. Incremental soil (IS) sampling to detect propellant constituents associated with historical rocket/missile testing was conducted during the RI. Propellant constituents Nitrocellulose, Nitroglycerine, Perchlorate, and Nitrate detected in the IS soil samples were at concentrations well below SSLs. No contamination due to munitions constituents or propellants is suspected. All pathways are incomplete for both human and ecological receptors.

Installation: HOLLOMAN AIR FORCE BASE

MAJCOM: ACC **MRAID:** 854 **MRS:** XU854

FFID: NM657212442200

Description of Receptors (Human and Ecological):

Human receptors include Base personnel and residents, authorized contractors, visitors, recreational users, and trespassers.
Ecological receptors (biota) include all current and future terrestrial invertebrates, plants, and terrestrial birds, mammals, and reptiles, which may be exposed to the soil at the MRS.

Table 1

EHE Module: Munitions Type Data Element Worksheet

Classification	Description	Score
Sensitive	- All UXO that are considered likely to function upon any interaction with exposed persons [e.g., submunitions, 40mm high explosive (HE) grenades, white phosphorus (WP) munitions, high-explosive antitank (HEAT) munitions, and practice munitions with sensitive fuzes, but excluding all other practice munitions]. - All hand grenades containing energetic filler. - Bulk primary explosives, or mixtures of these with environmental media, such that the mixture poses an explosive hazard.	30

High explosive (used or damaged)	- All UXO containing a high-explosive filler (e.g., RDX, Composition B), that are not considered "sensitive."
	- All DMM containing a high-explosive filler that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		25

Pyrotechnic (used or damaged)	- All UXO containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades).
	- All DMM containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades) that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		20

High explosive (unused)	- All DMM containing a high explosive filler that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		15

Propellant	- All UXO containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor).
	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor) that are:
	  - Damaged by burning or detonation
	  - Deteriorated to the point of instability.
		15

Bulk secondary high explosives, pyrotechnics, or propellant	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor), that are deteriorated. - Bulk secondary high explosives, pyrotechnic compositions, or propellant (not contained in a munition), or mixtures of these with environmental media such that the mixture poses an explosive hazard.	10

Pyrotechnic (not used or damaged)	- All DMM containing a pyrotechnic fillers (i.e., red phosphorous), other than white phosphorous filler, that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		10

Practice	- All UXO that are practice munitions that are not associated with a sensitive fuze.
	- All DMM that are practice munitions that are not associated with a sensitive fuze and that have not:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		5

Riot control	- All UXO or DMM containing a riot control agent filler (e.g., tear gas).	3
Small arms	- All used munitions or DMM that are categorized as small arms ammunition [Physical evidence or historical evidence that no other types of munitions (e.g., grenades, subcaliber training rockets) were used or are present on the MRS is required for selection of this category.].	2
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
MUNITIONS TYPE	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 30).**	0

Site-specific data used in selection MUNITIONS TYPE classification:

Small arms debris associated with recent training activities consisting of .22-caliber, 5.56mm, 7.62mm, .38-caliber, .45-caliber, and .50-caliber was encountered during the CSE Phase II and RI investigations. MD associated with 40mm flares, M74 airburst simulator, slap flares, and smoke grenades was observed on the surface during the CSE Phase II. A negligible amount of MD (surface and subsurface) was discovered during the RI including 40mm cartridge, M18 smoke grenade (expended), 40mm casing, 40mm, flare pieces, and a grenade spoon. The CSE Phase II and RI did not discover any evidence of formal small arms training (e.g., targets, berms, and firing positions). No MEC was encountered during the CSE Phase II or RI.

Table 2

EHE Module: Source of Hazard Data Element Worksheet

Classification	Description	Score
Former Range	- The MRS is a former military range where munitions (including practice munitions with sensitive fuzes) have been used. Such areas include: impact or target areas, associated buffer and safety zones, firing points, and live-fire maneuver areas.	10
Former Munitions treatment (i.e., OB/OD unit)	- The MRS is a location where UXO or DMM (e.g., munitions, bulk explosives, bulk pyrotechnic, or bulk propellants) were burned or detonated for the purpose of treatment prior to disposal.	8
Former practice munitions range	- The MRS is a former military range on which only practice munitions without sensitive fuzes were used.	6
Former maneuver area	- The MRS is a former maneuver area where no munitions other than flares, simulators, smokes, and blanks were used. There must be evidence that no other munitions were used at the location to place an MRS into this category.	5
Former burial pit or other disposal area	- The MRS is a location where DMM were buried or disposed of (e.g., disposed of into a water body) without prior thermal treatment.	5
Former industrial operating facilities	- The MRS is a location that is a former munitions maintenance, manufacturing, or demilitarization facility.	4
Former firing points	- The MRS is a firing point, where the firing point is delineated as an MRS separate from the rest of a former military range.	4
Former missile or air defense artillery emplacements	- The MRS is a former missile defense or air defense artillery (ADA) emplacement not associated with a military range.	2
Former storage or transfer points	- The MRS is a location where munitions were stored or handled for transfer between different modes of transportation (e.g., rail to truck, truck to weapon system).	2
Former small arms range	- The MRS is a former military range where only small arms ammunition was used [There must be evidence that no other types of munitions (e.g., grenades) were used or are present to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that no UXO or DMM are present, or there is historical evidence indicating that no UXO or DMM are present.	0
Source of Hazard	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	5

Site-specific data characteristics used to select the SOURCE OF HAZARD classification:

Small arms debris associated with recent training activities consisting of .22-caliber, 5.56mm, 7.62mm, .38-caliber, .45-caliber, and .50-caliber was encountered during the CSE Phase II and RI investigations. MD associated with 40mm flares, M74 airburst simulator, slap flares, and smoke grenades was observed on the surface during the CSE Phase II. A negligible amount of MD (surface and subsurface) was discovered during the RI including 40mm cartridge, M18 smoke grenade (expended), 40mm casing, 40mm, flare pieces, and a grenade spoon. The CSE Phase II and RI did not discover any evidence of formal small arms training (e.g., targets, berms, and firing positions). No MEC was encountered during the CSE Phase II or RI.

Table 3

EHE Module: Information on the Location of Munitions Data Element Worksheet

Classification	Description	Score
Confirmed surface	- Physical evidence indicates that there are UXO or DMM on the surface of the MRS - Historical evidence (e.g., a confirmed incident report or accident report) indicates there are UXO or DMM on the surface of the MRS.	25
Confirmed subsurface, active	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS, and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM.	20
Confirmed subsurface, stable	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed.	15
Suspected (physical evidence)	- There is physical evidence (e.g., munitions debris, such fragments, penetrators, projectiles, shell casings, links, fins), other than the documented presence of UXO or DMM, indicating that UXO or DMM may be present at the MRS.	10
Suspected (historical evidence)	- There is historical evidence indicating that UXO or DMM may be present at the MRS.	5
Subsurface, physical constraint	- There is physical or historical evidence indicating that UXO or DMM may be present in the subsurface, but there is a physical constraint (e.g., pavement, water depth over 120 feet) preventing direct access to the UXO or DMM.	2
Small arms range (regardless of location	- The presence of small arms ammunition is confirmed or suspected, regardless of other factors such as geological stability [There must be evidence that no other types of munitions (e.g., grenades) were used or are present at the MRS to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
Location of Munitions	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 25).**	0

Site-specific data characteristics used to select the LOCATION OF MUNITIONS classification:

Small arms debris associated with recent training activities consisting of .22-caliber, 5.56mm, 7.62mm, .38-caliber, .45-caliber, and .50-caliber was encountered during the CSE Phase II and RI investigations. MD associated with 40mm flares, M74 airburst simulator, slap flares, and smoke grenades was observed on the surface during the CSE Phase II. A negligible amount of MD (surface and subsurface) was discovered during the RI including 40mm cartridge, M18 smoke grenade (expended), 40mm casing, 40mm, flare pieces, and a grenade spoon. The CSE Phase II and RI did not discover any evidence of formal small arms training (e.g., targets, berms, and firing positions). No MEC was encountered during the CSE Phase II or RI.

EHE Module: Ease of Access Data Element Worksheet

Classification	Description	Score
No barrier	- There is no barrier preventing access to any part of the MRS (i.e., all parts of the MRS are accessible).	10
Barrier to MRS access is incomplete	- There is a barrier preventing access to parts of the MRS, but not the entire MRS.	8
Barrier to MRS access is complete but not monitored	- There is a barrier preventing access to all parts of the MRS, but there is no surveillance (e.g., by a guard) to ensure that the barrier is effectively preventing access to all parts of the MRS.	5
Barrier to MRS access is complete and monitored	- There is a barrier preventing access to all parts of the MRS, and there is active, continual surveillance (e.g., by a guard, video monitoring) to ensure that the barrier is effectively preventing access to all parts of the MRS.	0
Ease of Access	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	8

Site-specific characteristics used to select the EASE OF ACCESS classification:

Access to Holloman AFB requires admittance through the security gate and there is a fence around the installation. The Able 51 Area (XU854) MRSis located just west of the Holloman AFB main installation boundary fence, on the land that belongs to the White Sands Missile Range. The XU854 MRS is accessed through a locked gate located at the end of the main access road, but the fence is not complete and may be circumvented using established dirt roads.

2010 census data indicates that Otero county has a population of 63,797 (U.S. Census Bureau [USCB], 2015). In 2013 Otero County had an estimated population of 54,616. Based on the 2013 population estimate, Otero County has a population density of 9.9 people per square mile.

Buildings 1440 and 1442 are within the MRS. Since missile testing ended at the Able 51 Area in the early 1970s, building 1440 has been either used for storage or has been vacant. Building 1442 is currently vacant. There are 81 buildings within a two-mile radius of the MRS, consisting of operational mission support facilities and flight line support buildings.

Cultural resource sites present within the MRS include two Cold War era missile development facilities (buildings 1440 and 1442). Both buildings are considered individually eligible for inclusion in the NRHP.

No ecological resources are present at the MRS.

HHE Module: Groundwater Data Element Worksheet

Contaminant	Maximum Concentration (ug/L)	Comparison Value (ug/L)	Ratios
CHF Scale	**CHF Value**	**Contamination Hazard Factor (CHF)**	**No Data**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CHF Value		**CHF VALUE**	**NA**

Migratory Pathway Factor		
Evident	Analytical data or observable evidence indicates that contamination in the groundwater is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in groundwater has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the groundwater to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	NA
Receptor Factor		
Identified	There is a threatened water supply well downgradient of the source and the groundwater is a current source of drinking water or source of water for other beneficial uses such as irrigation/agriculture (equivalent to Class I or IIA aquifer).	H
Potential	There is no threatened water supply well downgradient of the source and the groundwater is currently or potentially usable for drinking water, irrigation, or agriculture (equivalent to Class I, IIA, or IIB aquifer).	M
Limited	There is no potentially threatened water supply well downgradient of the source and the groundwater is not considered a potential source of drinking water and is of limited beneficial use (equivalent to Class IIIA or IIIB aquifer, or where perched aquifer exists only).	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	NA

Alternative Module Ratings	Prioritization No Longer Required
	No Known or Suspected Hazard

Rationale for Selection of MPF:

Rationale for Selection of RF:

Sample comments:

No MEC presenting a potential source for MC was observed at the Able 51 Area during the CSE Phase II and RI, thus no MC soil sampling occurred during the CSE Phase II or RI. IS sampling to detect propellant constituents associated with historical rocket/missile testing was conducted during the RI. Propellant constituents Nitrocellulose, Nitroglycerine, Perchlorate, and Nitrate detected in the IS soil samples were at concentrations well below SSLs. No soil contamination due to munitions constituents or propellants is suspected. Contamination of groundwater is not suspected.

Table 25

HHE Module: Sediment - Ecological Endpoint Data Element Worksheet

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratios
CHF Scale	**CHF Value**	**Contamination Hazard Factor (CHF)**	**No Data**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CHF Value		**CHF VALUE**	**NA**

Migratory Pathway Factor		
Evident	Analytical data or observable evidence indicates that contamination in the sediment is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in sediment has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the sediment to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	NA

Receptor Factor		
Identified	Identified receptors to have access to sediment to which contamination has moved or can move.	H
Potential	potential for receptors to have access to sediment to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to sediment to which contamination has moved or can move.	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	NA

Alternative Module Ratings	Prioritization No Longer Required
	No Known or Suspected Hazard

Table 26

HHE Module: Soil - Data Element Worksheet

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratios
Perchlorate	0.352	55	0.0
Nitrate	35.6	130000	0.0
Nitroglycerin	0.78	1000	0.0
CHF Scale	**CHF Value**	**Contamination Hazard Factor (CHF)**	**0.0**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CHF Value		**CHF VALUE**	**L**

Migratory Pathway Factor		
Evident	Analytical data or observable evidence indicates that contamination in the soil is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in soil has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the soil to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	L

Receptor Factor		
Identified	Identified receptors to have access to soil to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to soil to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to soil to which contamination has moved or can move.	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	L

Alternative Module Ratings	
	Prioritization No Longer Required
	No Known or Suspected Hazard

Rationale for Selection of MPF:

Very low levels of contamination and results indicatesa low potential for contaminant migration from the source via the soil to a potential point of exposure.

Rationale for Selection of RF:

Very low levels of contamination and little potential for receptors to have access to soil with contamination.

Sample comments:

No MEC presenting a potential source for MC was observed at the Able 51 Area during the CSE Phase II and RI, thus no MC soil sampling occurred during the CSE Phase II or RI. Incremental soil (IS) sampling to detect propellant constituents associated with historical rocket/missile testing was conducted during the RI. Nitrocellulose, Nitroglycerine, Perchlorate, and Nitrate detected in the IS samples were at concentrations well below SSLs. No soil contamination due to munitions constituents or propellants is suspected.

MRS Background Information

Munitions Response Site Name: Poorman Range

Component: Air Force

Installation/Property Name: HOLLOMAN AIR FORCE BASE

Location (City, County, State): Alamogordo, Otero County, NM

Site Name/Project name (Project No.): Poorman Range

Date Information Entered\Updated: 4/10/2015 4:24:58 PM

Point of Contact Name: DeAnna Rothhaupt **Point of Contact Phone:** (575) 571-3931

Project Phase (check only one):

☐ PA	☐ SI	☑ RI	☐ FS	☐ RD
☐ RA	☐ RIP	☐ RC		

Media Evaluated (check all that apply):

☐ Groundwater	☐ Sediment (human receptor)
☑ Surface soil	☐ Surface Water (ecological receptor)
☐ Sediment (ecological receptor)	☐ Surface Water (human receptor)

MRS Summary:

MRS Description: Describe the munitions-related activities that occurred at the installation, the dates of operation, and the UXO, DMM, or MC known or suspected to be present. When possible, identify munitions, CWM, and MC by type:

The Poorman Range (SR864) site is a 22.80-acre MRS that encompasses the 5.40-acre Poorman Range MRA, MRA 864. The MRA acreage increased from 5.40-acres to 22.80-acres based on the presence of MEC, MD, and small arms debris (SD) east and west of the original MRA boundary and the entire MRA was designated as the SR864 MRS at the conclusion of the CSE Phase II. The site is located east of the Jeep Target Area active range, just southwest of the Jeep Target Area Skeet Range (TS862). The MRA is visible on aerial photography from as early as 1945. The Laboratory of Anthropology Site Record describes it as a feature located southeast of the Jeep Target Area consisting of 25 gun placement stations. Each firing station is composed of a constellation of seven concrete pads, including one gun mount pad. The area was used for training using .50 caliber guns and ammunition.
Evidence of historical small arms range use was observed during the CSE phase II and RI. The concrete firing pads are still intact and wooden tow target cart debris was present. .50 caliber casings and links were observed near the firing pads.
Evidence of training maneuver activity, likely from recent Prime BEEF training at the Jeep Target Area range, was observed during the CSE Phase II and RI. Small arms debris including .30, and .45 caliber, and 5.56mm and 7.62mm blanks were encountered during the CSE phase II and/or RI.
MD observed during the CSE Phase II included M18 smoke grenade, M116A1 hand grenade simulator, and M115A2 ground burst simulator pieces.
MD encountered during the RI included M18 smoke grenade pieces, a grenade spoon, and a trip flare bracket.
MEC items encountered during the CSE Phase II visual survey included two intact M18 smoke grenades, two intact M116A1 hand grenade simulators, and one intact M115A2 ground burst simulator which were turned over to Base EOD. MEC encountered during the 100% coverage RI surface clearance included one M18 smoke grenade. One DMM item, an M18 smoke grenade with safety pin intact was also discovered during the RI. No subsurface MEC/DMM was encountered during the 100% coverage RI subsurface investigation.

Description of Pathways for Human and Ecological Receptors:

MEC: Natural physical processes and human activities (intrusive and non-intrusive) for surface and subsurface MEC. Pathways for surface and subsurface MEC are incomplete for all receptors.
MC: Lead and PAH's were detected in soil during the CSE Phase II. Lead was slightly above approved Holloman AFB soil background and the Eco SSl for the most sensitive ecological receptor category but well below HH SSLs. PAH detections were below HH and Eco SSls. During the RI soil samples were collected at MEC/DMM find locations and at the Safe Disposal Area (SDA) location. The RI samples were non-detect for explosives and all detected metals were below background concentrations. Based on CSE Phase II and RI results all pathways are considered incomplete for both human and ecological receptors.

Installation: HOLLOMAN AIR FORCE BASE

MAJCOM: ACC **MRAID:** 864 **MRS:** SR864

FFID: NM657212442200

Description of Receptors (Human and Ecological):

Human receptors include Base personnel and residents, authorized contractors, visitors, recreational users, and trespassers.
Ecological receptors (biota) include all current and future terrestrial invertebrates, plants, and terrestrial birds, mammals, and reptiles, which may be exposed to the soil at the MRS.

Table 1

EHE Module: Munitions Type Data Element Worksheet

Classification	Description	Score
Sensitive	- All UXO that are considered likely to function upon any interaction with exposed persons [e.g., submunitions, 40mm high explosive (HE) grenades, white phosphorus (WP) munitions, high-explosive antitank (HEAT) munitions, and practice munitions with sensitive fuzes, but excluding all other practice munitions]. - All hand grenades containing energetic filler. - Bulk primary explosives, or mixtures of these with environmental media, such that the mixture poses an explosive hazard.	30

High explosive (used or damaged)	- All UXO containing a high-explosive filler (e.g., RDX, Composition B), that are not considered "sensitive."
	- All DMM containing a high-explosive filler that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		25

Pyrotechnic (used or damaged)	- All UXO containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades).
	- All DMM containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades) that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		20

High explosive (unused)	- All DMM containing a high explosive filler that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		15

Propellant	- All UXO containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor).
	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor) that are:
	  - Damaged by burning or detonation
	  - Deteriorated to the point of instability.
		15

Bulk secondary high explosives, pyrotechnics, or propellant	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor), that are deteriorated. - Bulk secondary high explosives, pyrotechnic compositions, or propellant (not contained in a munition), or mixtures of these with environmental media such that the mixture poses an explosive hazard.	10

Pyrotechnic (not used or damaged)	- All DMM containing a pyrotechnic fillers (i.e., red phosphorous), other than white phosphorous filler, that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		10

Practice	- All UXO that are practice munitions that are not associated with a sensitive fuze.
	- All DMM that are practice munitions that are not associated with a sensitive fuze and that have not:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		5

Riot control	- All UXO or DMM containing a riot control agent filler (e.g., tear gas).	3
Small arms	- All used munitions or DMM that are categorized as small arms ammunition [Physical evidence or historical evidence that no other types of munitions (e.g., grenades, subcaliber training rockets) were used or are present on the MRS is required for selection of this category.].	2
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
MUNITIONS TYPE	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 30).**	0

Site-specific data used in selection MUNITIONS TYPE classification:

100% coverage surface and subsurface removal was performed during the RI. One MEC item, an M18 smoke grenade with fuze impinged, and one DMM item an M18 smoke grenade with safety pin intact was removed from the surface during the RI. MD, associated with recent training activities, were removed including M18 smoke grenade pieces, a grenade spoon, and a trip flare bracket. Small arms debris associated with historic and recent training was removed including .30, and .45 caliber, and 5.56mm and 7.62mm blanks and wooden tow target cart debris.

Table 2

EHE Module: Source of Hazard Data Element Worksheet

Classification	Description	Score
Former Range	- The MRS is a former military range where munitions (including practice munitions with sensitive fuzes) have been used. Such areas include: impact or target areas, associated buffer and safety zones, firing points, and live-fire maneuver areas.	10
Former Munitions treatment (i.e., OB/OD unit)	- The MRS is a location where UXO or DMM (e.g., munitions, bulk explosives, bulk pyrotechnic, or bulk propellants) were burned or detonated for the purpose of treatment prior to disposal.	8
Former practice munitions range	- The MRS is a former military range on which only practice munitions without sensitive fuzes were used.	6
Former maneuver area	- The MRS is a former maneuver area where no munitions other than flares, simulators, smokes, and blanks were used. There must be evidence that no other munitions were used at the location to place an MRS into this category.	5
Former burial pit or other disposal area	- The MRS is a location where DMM were buried or disposed of (e.g., disposed of into a water body) without prior thermal treatment.	5
Former industrial operating facilities	- The MRS is a location that is a former munitions maintenance, manufacturing, or demilitarization facility.	4
Former firing points	- The MRS is a firing point, where the firing point is delineated as an MRS separate from the rest of a former military range.	4
Former missile or air defense artillery emplacements	- The MRS is a former missile defense or air defense artillery (ADA) emplacement not associated with a military range.	2
Former storage or transfer points	- The MRS is a location where munitions were stored or handled for transfer between different modes of transportation (e.g., rail to truck, truck to weapon system).	2
Former small arms range	- The MRS is a former military range where only small arms ammunition was used [There must be evidence that no other types of munitions (e.g., grenades) were used or are present to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that no UXO or DMM are present, or there is historical evidence indicating that no UXO or DMM are present.	0
Source of Hazard	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	0

Site-specific data characteristics used to select the SOURCE OF HAZARD classification:

1100% coverage surface and subsurface removal was performed during the RI. One MEC item, an M18 smoke grenade with fuze impinged, and one DMM item an M18 smoke grenade with safety pin intact was removed from the surface during the RI. MD, associated with recent training activities, were removed including M18 smoke grenade pieces, a grenade spoon, and a trip flare bracket. Small arms debris associated with historic and recent training was removed including .30, and .45 caliber, and 5.56mm and 7.62mm blanks and wooden tow target cart debris.

Table 3

EHE Module: Information on the Location of Munitions Data Element Worksheet

Classification	Description	Score
Confirmed surface	- Physical evidence indicates that there are UXO or DMM on the surface of the MRS - Historical evidence (e.g., a confirmed incident report or accident report) indicates there are UXO or DMM on the surface of the MRS.	25
Confirmed subsurface, active	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS, and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM.	20
Confirmed subsurface, stable	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed.	15
Suspected (physical evidence)	- There is physical evidence (e.g., munitions debris, such fragments, penetrators, projectiles, shell casings, links, fins), other than the documented presence of UXO or DMM, indicating that UXO or DMM may be present at the MRS.	10
Suspected (historical evidence)	- There is historical evidence indicating that UXO or DMM may be present at the MRS.	5
Subsurface, physical constraint	- There is physical or historical evidence indicating that UXO or DMM may be present in the subsurface, but there is a physical constraint (e.g., pavement, water depth over 120 feet) preventing direct access to the UXO or DMM.	2
Small arms range (regardless of location	- The presence of small arms ammunition is confirmed or suspected, regardless of other factors such as geological stability [There must be evidence that no other types of munitions (e.g., grenades) were used or are present at the MRS to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
Location of Munitions	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 25).**	0

Site-specific data characteristics used to select the LOCATION OF MUNITIONS classification:

100% coverage surface and subsurface removal was performed during the RI. One MEC item, an M18 smoke grenade with fuze impinged, and one DMM item an M18 smoke grenade with safety pin intact was removed from the surface during the RI. MD, associated with recent training activities, were removed including M18 smoke grenade pieces, a grenade spoon, and a trip flare bracket. Table 4

EHE Module: Ease of Access Data Element Worksheet

Classification	Description	Score
No barrier	- There is no barrier preventing access to any part of the MRS (i.e., all parts of the MRS are accessible).	10
Barrier to MRS access is incomplete	- There is a barrier preventing access to parts of the MRS, but not the entire MRS.	8
Barrier to MRS access is complete but not monitored	- There is a barrier preventing access to all parts of the MRS, but there is no surveillance (e.g., by a guard) to ensure that the barrier is effectively preventing access to all parts of the MRS.	5
Barrier to MRS access is complete and monitored	- There is a barrier preventing access to all parts of the MRS, and there is active, continual surveillance (e.g., by a guard, video monitoring) to ensure that the barrier is effectively preventing access to all parts of the MRS.	0
Ease of Access	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	8

Site-specific characteristics used to select the EASE OF ACCESS classification:

The Poorman Range MRS (SR864) is located on Holloman AFB, which is an active military installation. Access to Holloman AFB requires admittance through the security gate and there is a fence around the installation. The Poorman Range is accessed through a locked gate, but the fence is not complete and may be circumvented using established dirt roads.
2010 census data indicates that Otero county has a population of 63,797 (U.S. Census Bureau [USCB], 2015). In 2013 Otero County had an estimated population of 54,616. Based on the 2013 population estimate, Otero County has a population density of 9.9 people per square mile.
There are 101 buildings within a two-mile radius of the MRS, consisting of operational mission support facilities.
No cultural or ecological resources are present at the MRS.

Population Near Hazard	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 5).**	5

Site-specific data characteristics used to select the POPULATION NEAR HAZARD classification:

The Poorman Range MRS (SR864) is located on Holloman AFB, which is an active military installation. Access to Holloman AFB requires admittance through the security gate and there is a fence around the installation. The Poorman Range is accessed through a locked gate, but the fence is not complete and may be circumvented using established dirt roads.
2010 census data indicates that Otero county has a population of 63,797 (U.S. Census Bureau [USCB], 2015). In 2013 Otero County had an estimated population of 54,616. Based on the 2013 population estimate, Otero County has a population density of 9.9 people per square mile.
There are 101 buildings within a two-mile radius of the MRS, consisting of operational mission support facilities.
No cultural or ecological resources are present at the MRS.

EHE Module: Types of Activities/Structures Data Element Worksheet

Classification	Description	Score
Residential. educational, or subsitence	- Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with any of the following purposes: residential, educational, child care, critical assets (e.g., hospitals, fire and rescue, police stations, dams), hotels, commercial, shopping centers, playgrounds, community gathering areas, religious sites, or sites used for subsistence hunting, fishing, and gathering.	5
Parks and recreational areas	- Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with parks, nature preserves, or other recreational uses.	4
Agricultural, forestry	- Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with agriculture or forestry.	3
Industrial or warehousing	- Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with industrial activities or warehousing.	2
No known or recurring activities	- There are no known or recurring activities occurring up to two miles from the MRS's boundary or within the MRS's boundary.	1
Types of Activites/Structures	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 5).**	2

Site-specific data characteristics used to select the LOCATION OF MUNITIONS classification:

The Poorman Range MRS (SR864) is located on Holloman AFB, which is an active military installation. Access to Holloman AFB requires admittance through the security gate and there is a fence around the installation. The Poorman Range is accessed through a locked gate, but the fence is not complete and may be circumvented using established dirt roads.
2010 census data indicates that Otero county has a population of 63,797 (U.S. Census Bureau [USCB], 2015). In 2013 Otero County had an estimated population of 54,616. Based on the 2013 population estimate, Otero County has a population density of 9.9 people per square mile.
There are 101 buildings within a two-mile radius of the MRS, consisting of operational mission support facilities.
No cultural or ecological resources are present at the MRS.

HHE Module: Groundwater Data Element Worksheet

Contaminant	Maximum Concentration (ug/L)	Comparison Value (ug/L)	Ratios
CHF Scale	**CHF Value**	**Contamination Hazard Factor (CHF)**	**No Data**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CHF Value		**CHF VALUE**	**NA**

Migratory Pathway Factor		
Evident	Analytical data or observable evidence indicates that contamination in the groundwater is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in groundwater has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the groundwater to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	NA
Receptor Factor		
Identified	There is a threatened water supply well downgradient of the source and the groundwater is a current source of drinking water or source of water for other beneficial uses such as irrigation/agriculture (equivalent to Class I or IIA aquifer).	H
Potential	There is no threatened water supply well downgradient of the source and the groundwater is currently or potentially usable for drinking water, irrigation, or agriculture (equivalent to Class I, IIA, or IIB aquifer).	M
Limited	There is no potentially threatened water supply well downgradient of the source and the groundwater is not considered a potential source of drinking water and is of limited beneficial use (equivalent to Class IIIA or IIIB aquifer, or where perched aquifer exists only).	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	NA

Alternative Module Ratings	Prioritization No Longer Required
	No Known or Suspected Hazard

Rationale for Selection of MPF:

Rationale for Selection of RF:

Sample comments:

Lead and PAH's were detected in soil during the CSE Phase II. Lead was slightly above approved Holloman AFB soil background and the Eco SSI for the most sensitive ecological receptor category but well below HH SSLs. PAH detections were below HH and Eco SSIs. CSE Phase II HH and Eco risk assessments determined that the detected lead and PAH concentrations do not pose potential risk for human or ecological receptors. During the RI soil samples were collected at MEC/DMM find locations and at the Safe Disposal Area (SDA) location. The RI samples were non-detect for explosives and detected metals were below background concentrations. Contamination of groundwater is not suspected.

Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	L

Alternative Module Ratings	
	Prioritization No Longer Required
	No Known or Suspected Hazard

Rationale for Selection of MPF:

Very low levels of contamination and results indicatesa low potential for contaminant migration from the source via the soil to a potential point of

exposure.

Rationale for Selection of RF:

Very low levels of contamination and little potential for receptors to have access to soil with contamination.

Sample comments:

Lead and PAH's were detected in soil during the CSE Phase II. Lead was slightly above approved Holloman AFB soil background and the Eco SSl for the most sensitive ecological receptor category but well below HH SSLs. PAH detections were below HH and Eco SSls. CSE Phase II HH and Eco risk assessments determined that the detected lead and PAH concentrations do not pose potential risk for human or ecological receptors. During the RI soil samples were collected at MEC/DMM find locations and at the Safe Disposal Area (SDA) location. The RI samples were non-detect for explosives and detected metals were below background concentrations. CSE Phase II HH and Eco risk assessments determined that the detected lead and PAH concentrations do not pose potential risk for human or ecological receptors. The maximum lead and PAH results from the CSE Phase II and copper results from the RI are reported.

MRS Summary:

MRS Description: Describe the munitions-related activities that occurred at the installation, the dates of operation, and the UXO, DMM, or MC known or suspected to be present. When possible, identify munitions, CWM, and MC by type:

The Ballistics Rain Field (ML865) site is an 18.30-acre MRS that encompasses the 5.2-acre Ballistics Rain Field MRA, MRA 865. The MRA acreage increased from 5.2-acres to 18.30 acres based on the presence of munitions related items surrounding the MRA and the entire MRA was designated as the ML865 MRS at the conclusion of the CSE Phase II. The MRA was used to create artificial rain for the purpose of testing the effects on artillery. The period of operation for MRA 865 is unknown; however; aerial photography from 1972 shows the earth and timber target butt at the western end of a road perpendicular to the HSTT. Debris from 20, 37, 75, 105, and 155mm projectiles were observed during the CSE Phase II. Some projectiles were intact; these were collected by Holloman AFB EOD and confirmed to contain inert filler. In addition to the projectiles, expended 5-inch rocket motors and missile debris were observed during the CSE Phase II. MD discovered during the 100% coverage RI surface clearance and limited intrusive investigation of exploratory test pits included 40, 75, and 105mm projectiles. Intact projectiles were confirmed to contain inert filler. In addition expended 5-inch rocket motor pieces were also discovered on the surface during the RI. No MEC has been found at the MRS during the CSE Phase II or RI; however significant DGM anomalies indicate the potential for subsurface MEC.

Description of Pathways for Human and Ecological Receptors:

MEC: Natural physical processes and human activities (intrusive and non-intrusive) for surface and subsurface MEC. Pathways for surface MEC are incomplete for all receptors and pathways for subsurface MEC are potentially complete for Base personnel and residents and contractors and incomplete for visitors/recreational users and trespassers and biota.
MC: CSE Phase II surface soil samples were non-detect for explosives. RDX was detected in one RI soil sample below the HH and Eco SSL. Metals were below approved Holloman AFB soil background concentrations with the exception of copper which exceeded the background and Eco SSL but was well below human health screening level in three RI soil samples. Surface soil pathways are incomplete for all receptors. Subsurface soil pathways are potentially complete for all receptors. Food chain pathways are potentially complete for biota and incomplete for all other receptors.

Description of Receptors (Human and Ecological):

Human receptors include Base personnel and residents, authorized contractors, visitors, recreational users, and trespassers.
Ecological receptors (biota)include all current and future terrestrial invertebrates, plants, and terrestrial birds, mammals, and reptiles, which may be exposed to the soil at the MRS.

Table 1

EHE Module: Munitions Type Data Element Worksheet

Classification	Description	Score
Sensitive	- All UXO that are considered likely to function upon any interaction with exposed persons [e.g., submunitions, 40mm high explosive (HE) grenades, white phosphorus (WP) munitions, high-explosive antitank (HEAT) munitions, and practice munitions with sensitive fuzes, but excluding all other practice munitions]. - All hand grenades containing energetic filler. - Bulk primary explosives, or mixtures of these with environmental media, such that the mixture poses an explosive hazard.	30

High explosive (used or damaged)	- All UXO containing a high-explosive filler (e.g., RDX, Composition B), that are not considered "sensitive."
	- All DMM containing a high-explosive filler that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		25

Pyrotechnic (used or damaged)	- All UXO containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades).
	- All DMM containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades) that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		20

High explosive (unused)	- All DMM containing a high explosive filler that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		15

Propellant	- All UXO containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor).
	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor) that are:
	  - Damaged by burning or detonation
	  - Deteriorated to the point of instability.
		15

Bulk secondary high explosives, pyrotechnics, or propellant	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor), that are deteriorated. - Bulk secondary high explosives, pyrotechnic compositions, or propellant (not contained in a munition), or mixtures of these with environmental media such that the mixture poses an explosive hazard.	10

Pyrotechnic (not used or damaged)	- All DMM containing a pyrotechnic fillers (i.e., red phosphorous), other than white phosphorous filler, that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		10

Practice	- All UXO that are practice munitions that are not associated with a sensitive fuze.
	- All DMM that are practice munitions that are not associated with a sensitive fuze and that have not:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		5

Riot control	- All UXO or DMM containing a riot control agent filler (e.g., tear gas).	3
Small arms	- All used munitions or DMM that are categorized as small arms ammunition [Physical evidence or historical evidence that no other types of munitions (e.g., grenades, subcaliber training rockets) were used or are present on the MRS is required for selection of this category.].	2
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
MUNITIONS TYPE	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 30).**	25

Site-specific data used in selection MUNITIONS TYPE classification:

Debris from 20, 37, 75, 105, and 155mm projectiles were observed during the CSE Phase II. Some projectiles were intact; these were collected by Holloman AFB EOD and confirmed to contain inert filler. In addition to the projectiles, expended 5-inch rocket motors and missile debris were observed during the CSE Phase II. MD discovered during the 100% coverage surface clearance and limited intrusive investigation of exploratory test pits included 40, 75, and 105mm projectiles. Intact projectiles were confirmed to contain inert filler. In addition expended 5-inch rocket motor pieces and 40 mm projectile pieces were also discovered on the surface during the RI. No MEC has been found at the MRS during the CSE Phase II or RI.

Table 2

EHE Module: Source of Hazard Data Element Worksheet

Classification	Description	Score
Former Range	- The MRS is a former military range where munitions (including practice munitions with sensitive fuzes) have been used. Such areas include: impact or target areas, associated buffer and safety zones, firing points, and live-fire maneuver areas.	10
Former Munitions treatment (i.e., OB/OD unit)	- The MRS is a location where UXO or DMM (e.g., munitions, bulk explosives, bulk pyrotechnic, or bulk propellants) were burned or detonated for the purpose of treatment prior to disposal.	8
Former practice munitions range	- The MRS is a former military range on which only practice munitions without sensitive fuzes were used.	6
Former maneuver area	- The MRS is a former maneuver area where no munitions other than flares, simulators, smokes, and blanks were used. There must be evidence that no other munitions were used at the location to place an MRS into this category.	5
Former burial pit or other disposal area	- The MRS is a location where DMM were buried or disposed of (e.g., disposed of into a water body) without prior thermal treatment.	5
Former industrial operating facilities	- The MRS is a location that is a former munitions maintenance, manufacturing, or demilitarization facility.	4
Former firing points	- The MRS is a firing point, where the firing point is delineated as an MRS separate from the rest of a former military range.	4
Former missile or air defense artillery emplacements	- The MRS is a former missile defense or air defense artillery (ADA) emplacement not associated with a military range.	2
Former storage or transfer points	- The MRS is a location where munitions were stored or handled for transfer between different modes of transportation (e.g., rail to truck, truck to weapon system).	2
Former small arms range	- The MRS is a former military range where only small arms ammunition was used [There must be evidence that no other types of munitions (e.g., grenades) were used or are present to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that no UXO or DMM are present, or there is historical evidence indicating that no UXO or DMM are present.	0
Source of Hazard	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	10

Site-specific data characteristics used to select the SOURCE OF HAZARD classification:

Debris from 20, 37, 75, 105, and 155mm projectiles were observed during the CSE Phase II. Some projectiles were intact; these were collected by Holloman AFB EOD and confirmed to contain inert filler. In addition to the projectiles, expended 5-inch rocket motors and missile debris were observed during the CSE Phase II. MD discovered during the 100% coverage surface clearance and limited intrusive investigation of exploratory test pits included 40, 75, and 105mm projectiles. Intact projectiles were confirmed to contain inert filler. In addition expended 5-inch rocket motor pieces were also discovered on the surface during the RI. No MEC has been found at the MRS during the CSE Phase II or RI; however significant DGM anomalies indicate the potential for subsurface MEC.

Table 3

EHE Module: Information on the Location of Munitions Data Element Worksheet

Classification	Description	Score
Confirmed surface	- Physical evidence indicates that there are UXO or DMM on the surface of the MRS - Historical evidence (e.g., a confirmed incident report or accident report) indicates there are UXO or DMM on the surface of the MRS.	25
Confirmed subsurface, active	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS, and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM.	20
Confirmed subsurface, stable	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed.	15
Suspected (physical evidence)	- There is physical evidence (e.g., munitions debris, such fragments, penetrators, projectiles, shell casings, links, fins), other than the documented presence of UXO or DMM, indicating that UXO or DMM may be present at the MRS.	10
Suspected (historical evidence)	- There is historical evidence indicating that UXO or DMM may be present at the MRS.	5
Subsurface, physical constraint	- There is physical or historical evidence indicating that UXO or DMM may be present in the subsurface, but there is a physical constraint (e.g., pavement, water depth over 120 feet) preventing direct access to the UXO or DMM.	2
Small arms range (regardless of location	- The presence of small arms ammunition is confirmed or suspected, regardless of other factors such as geological stability [There must be evidence that no other types of munitions (e.g., grenades) were used or are present at the MRS to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
Location of Munitions	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 25).**	10

Site-specific data characteristics used to select the LOCATION OF MUNITIONS classification:

Debris from 20, 37, 75, 105, and 155mm projectiles were observed during the CSE Phase II. Some projectiles were intact; these were collected by Holloman AFB EOD and confirmed to contain inert filler. In addition to the projectiles, expended 5-inch rocket motors and missile debris were observed during the CSE Phase II. Table 4

EHE Module: Ease of Access Data Element Worksheet

Classification	Description	Score
No barrier	- There is no barrier preventing access to any part of the MRS (i.e., all parts of the MRS are accessible).	10
Barrier to MRS access is incomplete	- There is a barrier preventing access to parts of the MRS, but not the entire MRS.	8
Barrier to MRS access is complete but not monitored	- There is a barrier preventing access to all parts of the MRS, but there is no surveillance (e.g., by a guard) to ensure that the barrier is effectively preventing access to all parts of the MRS.	5
Barrier to MRS access is complete and monitored	- There is a barrier preventing access to all parts of the MRS, and there is active, continual surveillance (e.g., by a guard, video monitoring) to ensure that the barrier is effectively preventing access to all parts of the MRS.	0
Ease of Access	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	8

Site-specific characteristics used to select the EASE OF ACCESS classification:

The Ballistics Rain Field MRS (ML865) is located on Holloman AFB, which is an active military installation. Access to Holloman AFB requires admittance through the security gate and there is a fence around the installation. MRS specific barriers include a locked gate and barbwire fence around the site but this fence is incomplete.
2010 census data indicates that Otero county has a population of 63,797 (U.S. Census Bureau [USCB], 2015). In 2013 Otero County had an estimated population of 54,616. Based on the 2013 population estimate, Otero County has a population density of 9.9 people per square mile.
There are 12 structures in a two mile radius of the MRS, consisting of operational mission support facilities.
No cultural or ecological resources are present at the MRS.

Table 21

HHE Module: Groundwater Data Element Worksheet

Contaminant	Maximum Concentration (ug/L)	Comparison Value (ug/L)	Ratios
CHF Scale	**CHF Value**	**Contamination Hazard Factor (CHF)**	**No Data**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CHF Value		**CHF VALUE**	**NA**

Migratory Pathway Factor		
Evident	Analytical data or observable evidence indicates that contamination in the groundwater is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in groundwater has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the groundwater to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	NA
Receptor Factor		
Identified	There is a threatened water supply well downgradient of the source and the groundwater is a current source of drinking water or source of water for other beneficial uses such as irrigation/agriculture (equivalent to Class I or IIA aquifer).	H
Potential	There is no threatened water supply well downgradient of the source and the groundwater is currently or potentially usable for drinking water, irrigation, or agriculture (equivalent to Class I, IIA, or IIB aquifer).	M
Limited	There is no potentially threatened water supply well downgradient of the source and the groundwater is not considered a potential source of drinking water and is of limited beneficial use (equivalent to Class IIIA or IIIB aquifer, or where perched aquifer exists only).	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	NA

Alternative Module Ratings	Prioritization No Longer Required
	No Known or Suspected Hazard

Rationale for Selection of MPF:

Rationale for Selection of RF:

Sample comments:

CSE Phase II surface soil samples were non-detect for explosives. RDX was detected in one RI soil sample below the HH and Eco SSL. Metals were below approved Holloman AFB soil background concentrations with the exception of copper which exceeded the background and Eco SSL but was well below human health screening level in three RI soil samples. Contamination of groundwater is not suspected, thus no groundwater samples were collected during the CSE phase II or RI.

Migratory Pathway Factor		
Evident	Analytical data or observable evidence indicates that contamination in the sediment is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in sediment has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the sediment to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	NA
Receptor Factor		
Identified	Identified receptors to have access to sediment to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to sediment to which contamination has moved or can move	M
Limited	Little or no potential for receptors to have access to sediment to which contamination has moved or can move	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	NA

Alternative Module Ratings	Prioritization No Longer Required
	No Known or Suspected Hazard

Migratory Pathway Factor

Evident	Analytical data or observable evidence indicates that contamination in the soil is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in soil has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the soil to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	L

Receptor Factor

Identified	Identified receptors to have access to soil to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to soil to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to soil to which contamination has moved or can move.	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	L

Alternative Module Ratings	
	Prioritization No Longer Required
	No Known or Suspected Hazard

Rationale for Selection of MPF:

Very low levels of contamination and results indicatesa low potential for contaminant migration from the source via the soil to a potential point of exposure.

Rationale for Selection of RF:

Very low levels of contamination and little potential for receptors to have access to soil with contamination.

Sample comments:

During the CSE Phase II, four surface soil samples were collected in the vicinity of damaged suspected MEC items and analyzed for explosives. All sample results were non-detect.
During the RI, eleven surface soil samples were collected in areas with a high concentration of MD and one sample was collected at the Safe Disposal Area (SDA) detonation location and analyzed for metals and explosives. All samples were non-detect for explosives except for the RI soil sample at the SDA location where RDX was detected below the HH and Eco SSL. Metals were detected below approved Holloman AFB soil background concentrations with the exception of copper in three samples which exceeded background and the Eco SSL but were well below the HH SSL.

☐ Surface soil	☐ Surface Water (ecological receptor)
☐ Sediment (ecological receptor)	☐ Surface Water (human receptor)

MRS Summary:

MRS Description: Describe the munitions-related activities that occurred at the installation, the dates of operation, and the UXO, DMM, or MC known or suspected to be present. When possible, identify munitions, CWM, and MC by type:

The Debris Field (RR869a) site is a 3.50-acre MRS that represents a portion of the 3.60-acre Debris Field MRA, MRA 869. The Debris Field MRA was delineated into two MRSs at the conclusion of the CSE Phase II: (1) the Debris Field (RR869a) MRS, 3.50 acres in size and (2) the Debris Field (RR869) MRS, 0.10 acres in size, which overlaps with a portion IRP site OT-04 which is ineligible under the MMRP. The history of munitions use at the MRA is unknown, debris consistent with a possible missile/drone crash and possible fragments of 5-inch rocket motors were observed during the CSE Phase I. The site is located on the south of Ritas Draw and north of Munitions Storage Buildings 1197 and 1198.
MD observed during the CSE Phase II visual survey included 2.75 inch rocket and rocket launcher debris, possible 5-inch rocket debris, one expended hand grenade fuze, and squib blasting wires, one of which was complete and treated as MEC by Base EOD. Also observed was one .50 caliber (steel body) projectile, along with sparse clay target debris.
MD recovered during the 100% coverage RI surface clearance were M18, smoke grenade (expended fuze components) and MK10, 5 inch rocket motor (venturi). No MEC/DMM was recovered during the RI surface clearance. No subsurface MEC or MD was recovered during the limited RI intrusive investigation conducted along the OT-04 site fence line bordering the MRS.

Description of Pathways for Human and Ecological Receptors:

MEC: Natural physical processes and human activities (intrusive and non-intrusive) for surface and subsurface MEC. Pathways for surface MEC are incomplete for all receptors. Pathways for subsurface MEC are potentially complete for Base personnel and authorized contractors.
MC: Subsurface soil pathways are potentially complete for all receptors. All other pathways are incomplete for all receptors.

Description of Receptors (Human and Ecological):

Human receptors include Base personnel and residents, authorized contractors, visitors, recreational users, and trespassers.
Ecological receptors (biota) include all current and future terrestrial invertebrates, plants, and terrestrial birds, mammals, and reptiles, which may be exposed to the soil at the MRS.

Table 1

EHE Module: Munitions Type Data Element Worksheet

Classification	Description	Score
Sensitive	- All UXO that are considered likely to function upon any interaction with exposed persons [e.g., submunitions, 40mm high explosive (HE) grenades, white phosphorus (WP) munitions, high-explosive antitank (HEAT) munitions, and practice munitions with sensitive fuzes, but excluding all other practice munitions]. - All hand grenades containing energetic filler. - Bulk primary explosives, or mixtures of these with environmental media, such that the mixture poses an explosive hazard.	30

High explosive (used or damaged)	- All UXO containing a high-explosive filler (e.g., RDX, Composition B), that are not considered "sensitive."
	- All DMM containing a high-explosive filler that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		25

Pyrotechnic (used or damaged)	- All UXO containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades).
	- All DMM containing pyrotechnic fillers other than white phosphorous (e.g., flares, signals, simulators, smoke grenades) that have:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		20

High explosive (unused)	- All DMM containing a high explosive filler that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		15

Propellant	- All UXO containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor).
	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor) that are:
	  - Damaged by burning or detonation
	  - Deteriorated to the point of instability.
		15

Bulk secondary high explosives, pyrotechnics, or propellant	- All DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor), that are deteriorated. - Bulk secondary high explosives, pyrotechnic compositions, or propellant (not contained in a munition), or mixtures of these with environmental media such that the mixture poses an explosive hazard.	10

Pyrotechnic (not used or damaged)	- All DMM containing a pyrotechnic fillers (i.e., red phosphorous), other than white phosphorous filler, that:
	  - Have not been damaged by burning or detonation
	  - Are not deteriorated to the point of instability.
		10

Practice	- All UXO that are practice munitions that are not associated with a sensitive fuze.
	- All DMM that are practice munitions that are not associated with a sensitive fuze and that have not:
	  - Been damaged by burning or detonation
	  - Deteriorated to the point of instability.
		5

Riot control	- All UXO or DMM containing a riot control agent filler (e.g., tear gas).	3
Small arms	- All used munitions or DMM that are categorized as small arms ammunition [Physical evidence or historical evidence that no other types of munitions (e.g., grenades, subcaliber training rockets) were used or are present on the MRS is required for selection of this category.].	2
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
MUNITIONS TYPE	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 30).**	20

Site-specific data used in selection MUNITIONS TYPE classification:

MD recovered during the 100% coverage RI surface clearance were M18, smoke grenade (expended fuze components) and MK10, 5 inch rocket motor (venturi). No MEC/DMM was recovered during the RI surface clearance. No subsurface MEC or MD was recovered during the limited RI intrusive investigation conducted along the OT-04 site fence line bordering the MRS. No hazard remains on the surface however, the potential for encountering rocket debris in the subsurface remains.

Table 2

EHE Module: Source of Hazard Data Element Worksheet

Classification	Description	Score
Former Range	- The MRS is a former military range where munitions (including practice munitions with sensitive fuzes) have been used. Such areas include: impact or target areas, associated buffer and safety zones, firing points, and live-fire maneuver areas.	10
Former Munitions treatment (i.e., OB/OD unit)	- The MRS is a location where UXO or DMM (e.g., munitions, bulk explosives, bulk pyrotechnic, or bulk propellants) were burned or detonated for the purpose of treatment prior to disposal.	8
Former practice munitions range	- The MRS is a former military range on which only practice munitions without sensitive fuzes were used.	6
Former maneuver area	- The MRS is a former maneuver area where no munitions other than flares, simulators, smokes, and blanks were used. There must be evidence that no other munitions were used at the location to place an MRS into this category.	5
Former burial pit or other disposal area	- The MRS is a location where DMM were buried or disposed of (e.g., disposed of into a water body) without prior thermal treatment.	5
Former industrial operating facilities	- The MRS is a location that is a former munitions maintenance, manufacturing, or demilitarization facility.	4
Former firing points	- The MRS is a firing point, where the firing point is delineated as an MRS separate from the rest of a former military range.	4
Former missile or air defense artillery emplacements	- The MRS is a former missile defense or air defense artillery (ADA) emplacement not associated with a military range.	2
Former storage or transfer points	- The MRS is a location where munitions were stored or handled for transfer between different modes of transportation (e.g., rail to truck, truck to weapon system).	2
Former small arms range	- The MRS is a former military range where only small arms ammunition was used [There must be evidence that no other types of munitions (e.g., grenades) were used or are present to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that no UXO or DMM are present, or there is historical evidence indicating that no UXO or DMM are present.	0
Source of Hazard	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	5

Site-specific data characteristics used to select the SOURCE OF HAZARD classification:

MD recovered during the 100% coverage RI surface clearance were M18, smoke grenade (expended fuze components) and MK10, 5 inch rocket motor (venturi). No MEC/DMM was recovered during the RI surface clearance. No subsurface MEC or MD was recovered during the limited RI intrusive investigation conducted along the OT-04 site fence line bordering the MRS. No hazard remains on the surface however, the potential for encountering rocket debris in the subsurface remains.

Table 3

EHE Module: Information on the Location of Munitions Data Element Worksheet

Classification	Description	Score
Confirmed surface	- Physical evidence indicates that there are UXO or DMM on the surface of the MRS - Historical evidence (e.g., a confirmed incident report or accident report) indicates there are UXO or DMM on the surface of the MRS.	25
Confirmed subsurface, active	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS, and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost, heat heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM.	20
Confirmed subsurface, stable	- Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed. - Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed.	15
Suspected (physical evidence)	- There is physical evidence (e.g., munitions debris, such fragments, penetrators, projectiles, shell casings, links, fins), other than the documented presence of UXO or DMM, indicating that UXO or DMM may be present at the MRS.	10
Suspected (historical evidence)	- There is historical evidence indicating that UXO or DMM may be present at the MRS.	5
Subsurface, physical constraint	- There is physical or historical evidence indicating that UXO or DMM may be present in the subsurface, but there is a physical constraint (e.g., pavement, water depth over 120 feet) preventing direct access to the UXO or DMM.	2
Small arms range (regardless of location	- The presence of small arms ammunition is confirmed or suspected, regardless of other factors such as geological stability [There must be evidence that no other types of munitions (e.g., grenades) were used or are present at the MRS to place an MRS into this category.].	1
Evidence of no munitions	- Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
Location of Munitions	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 25).**	10

Site-specific data characteristics used to select the LOCATION OF MUNITIONS classification:

MD recovered during the 100% coverage RI surface clearance were M18, smoke grenade (expended fuze components) and MK10, 5 inch rocket motor (venturi). No MEC/DMM was recovered during the RI surface clearance. No subsurface MEC or MD was recovered during the limited RI intrusive investigation conducted along the OT-04 site fence line bordering the MRS. No hazard remains on the surface however, the potential for encountering rocket debris in the subsurface remains.

EHE Module: Ease of Access Data Element Worksheet

Classification	Description	Score
No barrier	- There is no barrier preventing access to any part of the MRS (i.e., all parts of the MRS are accessible).	10
Barrier to MRS access is incomplete	- There is a barrier preventing access to parts of the MRS, but not the entire MRS.	8
Barrier to MRS access is complete but not monitored	- There is a barrier preventing access to all parts of the MRS, but there is no surveillance (e.g., by a guard) to ensure that the barrier is effectively preventing access to all parts of the MRS.	5
Barrier to MRS access is complete and monitored	- There is a barrier preventing access to all parts of the MRS, and there is active, continual surveillance (e.g., by a guard, video monitoring) to ensure that the barrier is effectively preventing access to all parts of the MRS.	0
Ease of Access	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 10).**	8

Site-specific characteristics used to select the EASE OF ACCESS classification:

The Debris Field MRS (RR869a) is located on Holloman AFB, which is an active military installation. Access to Holloman AFB requires admittance through the security gate and there is a fence around the installation. A fence with a locked gate encompassing the area that includes the Debris Field is not complete and may be circumvented using established dirt roads.
2010 census data indicates that Otero county has a population of 63,797 (U.S. Census Bureau [USCB], 2015). In 2013 Otero County had an estimated population of 54,616. Based on the 2013 population estimate, Otero County has a population density of 9.9 people per square mile.
There are 100 buildings within a two-mile radius of the MRS, consisting of operational mission support facilities and recreational areas.
No cultural or ecological resources are present at the MRS.

Classification	Description	Score
26 or more inhabited structures	- There are 26 or more inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	5
16 to 25 inhabited structures	- There are 16 to 25 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	4
11 to 15 inhabited structures	- There are 11 to 15 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	3
6 to 10 inhabited structures	- There are 6 to 10 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	2
1 to 5 inhabited structures	- There are 1 to 5 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	1
0 inhabited structures	- There are no inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	0
Population Near Hazard	**DIRECTIONS: Record the single highest score from above in the box to the right (maximum score = 5).**	5

Site-specific data characteristics used to select the POPULATION NEAR HAZARD classification:

The Debris Field MRS (RR869a) is located on Holloman AFB, which is an active military installation. Access to Holloman AFB requires admittance through the security gate and there is a fence around the installation. A fence with a locked gate encompassing the area that includes the Debris Field is not complete and may be circumvented using established dirt roads.
2010 census data indicates that Otero county has a population of 63,797 (U.S. Census Bureau [USCB], 2015). In 2013 Otero County had an estimated population of 54,616. Based on the 2013 population estimate, Otero County has a population density of 9.9 people per square mile.
There are 100 buildings within a two-mile radius of the MRS, consisting of operational mission support facilities and recreational areas.
No cultural or ecological resources are present at the MRS.

Table 21

HHE Module: Groundwater Data Element Worksheet

Contaminant	Maximum Concentration (ug/L)	Comparison Value (ug/L)	Ratios
CHF Scale	**CHF Value**	**Contamination Hazard Factor (CHF)**	**No Data**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CHF Value		**CHF VALUE**	**NA**

Migratory Pathway Factor		
Evident	Analytical data or observable evidence indicates that contamination in the groundwater is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in groundwater has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the groundwater to a potential point of exposure (possibly due to geological structures or physical controls).	L
Migratory Pathway Factor	The single highest value from above in the box to the right (maximum value = H).	NA
Receptor Factor		
Identified	There is a threatened water supply well downgradient of the source and the groundwater is a current source of drinking water or source of water for other beneficial uses such as irrigation/agriculture (equivalent to Class I or IIA aquifer).	H
Potential	There is no threatened water supply well downgradient of the source and the groundwater is currently or potentially usable for drinking water, irrigation, or agriculture (equivalent to Class I, IIA, or IIB aquifer).	M
Limited	There is no potentially threatened water supply well downgradient of the source and the groundwater is not considered a potential source of drinking water and is of limited beneficial use (equivalent to Class IIIA or IIIB aquifer, or where perched aquifer exists only).	L
Receptor Factor	The single highest value from above in the box to the right (maximum value = H).	NA

Alternative Module Ratings	Prioritization No Longer Required
	No Known or Suspected Hazard

Rationale for Selection of MPF:

Rationale for Selection of RF:

Sample comments:

Groundwater sampling was conducted downgradient of the Debris Field (RR869a) as part of the investigation of the adjacent IRP site OT-04 (Debris Field [RR869]). Groundwater sampling was not conducted as part of the CSE Phase II or RI.
