SUBJECT LANL - Groundwater - Valle Grande

DISCUSSION

Frasier Goff has studied isotopes in groundwater at Sulfer Springs and Soda Springs and has found that there is a connection btw. the two. His wife Sue Goff works at 667-7200.

LANL has claimed in the past that the Valle Grande was the recharge zone for the groundwater below LANL. However, this isotope study indicates the water is moving to the south toward the Pemez River Valley. The recharge zone for the LANL groundwater may be LANL itself.
