This place has terrible echoes! Bad meeting hall!

Hello, Sorry i can't stay. Am concerned about the standards that limit the effectiveness of environmental adequacy built into these plans. Favor more filters and continuous monitoring - want the air to be cleaner & cleaner - Seems that an Environmental Impact Study should be held & published. Please send me one.

Is there any way that background and present air quality studies could get some results before plans procede? Without these stats you won't know the total exposure with incinerated fumes included. All toxins need monitoring. I would like more info on those subjects.

Thanks
