Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. In the FTB, samples RE03-09-14294, associated with samples -14277 and -14278, acetone was detected. The associated sample results were NDs and, thus, were not qualified.
2. In the ICV and/or CCV associated with sample -14294, the %Ds were >20% for dichlorodifluoromethane, trichlorofluoromethane, acetone, 2-butanone, tetrachloroethylene, carbon tetrachloride, 4-methyl-2-pentanone and 2-hexanone. In the ICV associated with all the other samples, the %Ds were >20% for acetone and chloroethane. In the CCV associated with samples -14274, -14277, -14282, -14269, -14273, -14271, -14278, -14285, -14286 and -14283, the %Ds were >20% for chloroethane, acetone, 2-butanone, carbon tetrachloride, 2-hexanone and 1,1,2,2-tetrachloroethane. In the CCV associated with all the other samples, the %Ds were >20% for chloromethane; chloroethane; acetone; 2-butanone; 2,2-dichloropropane; carbon tetrachloride; 4-methyl-2-pentanone; 2-hexanone and 1,1,2,2-tetrachloroethane. The acetone results for samples -14227, -14267, -14269 and -14294 were detects and, thus, were qualified J,V7c. All the other associated sample results were NDs and, thus, were qualified UJ,V7c.
3. In the LCSs associated with all the samples <u>except</u> -14294, the %Rs were > the laboratory's UAL for 1,1,1,2-tetrachloroethane. All the associated sample results were NDs and, thus, were not qualified.
4. It should be noted that in both MS/MSDs, multiple %RS and RPDs were outside the laboratory acceptance limits. It should also be noted that the MS/MSD analyses associated with sample -14294 were performed on a LANL sample from a different RN. Also, the raw data for the parent sample was not provided in the data package. However, MS/MSD analyses are not required for these analyses and, thus, no sample data were qualified.

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. The ICV %Ds were >20% for hexachlorocyclopentadiene; 4-bromophenylphenylether and indeno(1,2,3-cd)pyrene. In the CCV associated with samples RE03-09-14274, -14277, -14281, -14282 and -14284, the %D were >20% for bis(2-chloroisopropyl)ether, naphthalene, hexachlorocyclopentadiene, m-nitroaniline, p-nitroaniline, pyrene and bis(2-ethylhexyl)phthalate. In the CCV associated with samples -14269, -14273, -14278, -14283, -14285 and -14286, the %D were >20% for pyridine; benzoic acid; hexachlorocyclopentadiene; m-nitroaniline; 2-methyl-4,6-dinitrophenol; p-nitroaniline; bis(2-ethylhexyl)phthalate; indeno(1,2,3-cd)pyrene; dibenzo(a,h)anthracene and benzo(g,h,i)perylene. In the CCV associated with all the other samples, the %Ds were >20% for pyridine, bis(2-chloroisopropyl)ether, hexachlorocyclopentadiene and p-nitroaniline. The associated sample results that were detects were qualified J,SV7c and those that were NDs were qualified UJ,SV7c.
2. The p-terphenyl-d14 surrogate %R was > the laboratory's UAL for sample -14265. The associated sample was diluted before being analyzed and, thus, no sample data were qualified. The 2,4,6-tribromophenol and p-terphenyl-d14 surrogate %Rs were > the laboratory's UALs for sample -14285. Since there was only one surrogate outlier for each fraction, no sample data were qualified.
3. It should be noted that a few MS/MSD %Rs and RPDs were not within the laboratory's QC limits. However, MS/MSD analyses are not required for this analysis and, thus, no sample data were qualified.

1201999398	242654001(RE03-09-14224) Post Spike Duplicate (PSD)

NOTE: For volatile organic analyses the matrix spike designations may be indicated as "PS" or "PSD". The "PS" designation (post spike) indicates that the matrix was fortified prior to analysis but after applying any prep factors, such as a dilution. The laboratory considers the MS/MSD and PS/PSD designations interchangeable.
The samples in this SDG were analyzed on a "dry weight" basis.

Preparation/Analytical Method Verification

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV# 13.

Raw data reports are processed and reviewed by the analyst using the Chemstation software package. False positives have been removed from the quantitation reports per standard operating procedures (SOP) section 19.1.2. False positive analytes are designated on the quantitation report with a 'd' qualifier.

Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the software will update the 'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.

The surrogate compounds were calibrated using a minimum five-point calibration curve. The surrogates were added by the auto sampler at a concentration of 50 ug/L. GEL Laboratories LLC will not have surrogate recoveries reported for Dibromofluoromethane. This is due to increased regulations for this analyte and an industry shortage.

A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package.

Initial Calibration
All initial calibration requirements have been met for this sample delivery groups (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

Continuing Calibration Verification Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MBs analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
Surrogate recoveries in all client and quality control samples were within the acceptance limits.

Laboratory Control Sample (LCS) Recovery
The LCS recoveries were not all within the acceptance limits. The unacceptable recoveries were less than 5% of the requested analyte list. This satisfies the client criteria. The results are reported. See NCR 773639.

QC Sample Designation
Sample 242654001 (RE03-09-14224) was designated for spike analysis in this SDG.

Matrix Spike (PS) Recovery Statement
The spike recoveries were not all within the acceptance limits. The spike duplicate recovered in a similar manner. The results are reported. See NCR 773639.

Matrix Spike Duplicate (PSD) Recovery Statement
The spike duplicate recoveries were not all within the acceptance limits. The spike recovered in a similar manner. The results are reported. See NCR 773639.

Relative Percent Difference (RPD) Statement
The RPD values were not all within the acceptance limits between the spike and spike duplicate. The results are reported. See NCR 773639.

Internal Standard (ISTD) Acceptance
The internal standard responses in all client and quality control samples met the required acceptance criteria.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Sample Preservation and Integrity
All samples met the sample preservation and integrity requirements.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-analyses were not required for samples in this SDG.

Miscellaneous Information

Electronic Packaging Comment
This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted: Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation
NCR # 773639 was generated for this SDG.

Manual Integrations
Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment
Tentatively identified compounds (TIC) were required for this sample delivery group/work order. Please note that non-requested target analytes that are reported on the quantitation reports will not be present on the Form I. These detected analytes are included in the calibrated method and as a result cannot be reported on the TIC quantitation report.

Additional Comments
Additional comments were not required for this SDG.

Residual Chlorine
Residual Chlorine was not detected in any of the samples in this SDG.

System Configuration
The Volatile-GC/MS analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description	P & T Trap
VOAA.I	Agilent 7890/5975C GC/MS system	HP7890A/HP5975C	DB-624	J&W, 60m x 0.25mm x 1.4um	Trap 10

Certification Statement
Where the analytical method has been performed under NELAP certification, the analysis has met all the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Failed Recovery for LCS/LCSD

Failed Recovery for MSD/PSD

Specification and Requirements Nonconformance Description:	NRG Disposition:
1. The MS and MSD did not pass all spike recoveries. The RPD criteria were not all met.	1. It is believed matrix interference has been demonstrated. The results are reported.
2. The LCS (1201999399 and 1202000172)recovered above the acceptance limits for 1,1,1,2-Tetrachloroethane.	2. The unacceptable recoveries are less than 5% of the requested analyte list. This satisfies the client criteria. The results are reported.

GC/MS Volatile Analysis

GC/MS Volatile Organics
Los Alamos National Laboratory (LANL)
SDG 10-852-1

Method/Analysis Information

Procedure:	Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer
Analytical Method:	SW846 8260B
Prep Method:	SW846 5030
Analytical Batch Number:	934305
Prep Batch Number:	934300

Sample Analysis

The following client and quality control samples were analyzed to complete this SDG using the methods referenced in the Analysis Information section:

Sample ID	Client ID
242659001	RE03-09-14294
1201998949	Method Blank (MB)
1201998952	Laboratory Control Sample (LCS)
1201998953	Laboratory Control Sample (LCS)
1201998950	242668001(RE03-10-2741) Post Spike (PS)
1201998951	242668001(RE03-10-2741) Post Spike Duplicate (PSD)

NOTE: For volatile organic analyses the matrix spike designations may be indicated as "PS" or "PSD". The "PS" designation (post spike) indicates that the matrix was fortified prior to analysis but after applying any prep factors, such as a dilution. The laboratory considers the MS/MSD and PS/PSD designations interchangeable.
The samples in this SDG were analyzed on an "as received" basis.

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV# 13.

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 19.1.2.

Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the Target processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the Target software will update the 'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.

The surrogate compounds were calibrated using a minimum five-point calibration curve. The surrogates were added by the auto sampler at a concentration of 50 ug/L. GEL Laboratories LLC will not have surrogate recoveries reported for Dibromofluoromethane. This is due to increased regulations for this analyte and an industry shortage.

Due to software limitations, the Calibration Summary Form 6 may not indicate all the calibration files comprising the initial calibration. A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package.

The linear equation used in Target and indicated on the initial calibration summary form is not a conventional linear equation (slope intercept formula) and does not match the equation found in SW-846 method 8000B. The x and y axes are inversed in Target, so that the instrument response is treated as the independent variable (x) and the concentration ratio is treated as the dependent variable (y). The equation used in Target to calculate sample results is adjusted to account for the linear equation inversion and reciprocal slope. The adjusted calculation has been independently verified to produce valid results.

Initial Calibration
All initial calibration requirements have been met for this sample delivery groups (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

Continuing Calibration Verification Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
Surrogate recoveries in all client and quality control samples were within the acceptance limits.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

QC Sample Designation
Sample 242668001 (RE03-10-2741) was designated for spike analysis.

Matrix Spike (PS) Recovery Statement
The spike recoveries were not all within the acceptance limits. The spike duplicate recovered in a similar manner. The results are reported. See NCR 773328.

Matrix Spike Duplicate (PSD) Recovery Statement

Internal Standard (ISTD) Acceptance
The internal standard responses in all client and quality control samples met the required acceptance criteria.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Sample Preservation and Integrity
All samples met the sample preservation and integrity requirements.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-analyses were not required for samples in this SDG.

Miscellaneous Information

Electronic Package Comment
This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation
NCR # 773328 was generated for this SDG.

Manual Integrations
Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment
Tentatively identified compounds (TIC) were required for this SDG.

Additional Comments
The samples in this SDG were not in the analyst's custody in LIMS. However, the analyst did maintain custody of the samples during analysis. See NCR 773328.

Residual Chlorine
Residual Chlorine was not detected in any of the samples in this SDG.

System Configuration
The Volatile-GC/MS analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description	P & T Trap
VOA7.I	Gas Chromatograph/Mass Spectrometer	HP6890N/HP5973N	DB-624	J&W, 60m x 0.25mm x 1.4um	Trap 10

Certification Statement
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Preparation/Analytical Method Verification

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories

LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-009 REV# 22.

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 18.2.

Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the Target processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the Target software will update the 'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.

Due to software limitations, the Calibration Summary Form 6 may not indicate all the calibration files comprising the initial calibration. A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package. Please note that the second level of the initial calibration (5 mg/L) is only used for n-Nitrosodipropylamine. The various calibration mixes may not be calibrated using all of the calibration levels. In addition, not all of the mixes are calibrated using the same levels.

Diphenylamine has now superseded N-Nitroso-diphenylamine as a CCC on Quantitation Reports, Initial Calibration Reports, Calibration Check Standard Reports, etc. Previous versions of EPA Method 8270 (prior to 8270C) listed N-Nitroso-diphenylamine as a CCC. However, as stated in EPA Method 8270C, Revision 3, December, 1996, Section 1.4.5, "N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine." Studies of these two compounds at GEL, both independent of each other and together, show that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine will be reported as Diphenylamine on all reports and forms.

The linear equation used in Target and indicated on the initial calibration summary form is not a conventional linear equation (slope intercept formula) and does not match the equation found in SW-846 method 8000B. The x and y axes are inversed in Target, so that the instrument response is treated as the independent variable (x) and the concentration ratio is treated as the dependent variable (y). The equation used in Target to calculate sample results is adjusted to account for the linear equation inversion and reciprocal slope. The adjusted calculation has been independently verified to produce valid results.

Initial Calibration

All initial calibration requirements have been met for this sample delivery group (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

CCV Requirements

All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement

The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries

Sample 242654008 recovered p-Terphenyl-d14 at 131%. The limits are 40%-124%. Sample 242654008 was analyzed at a dilution due to the sample extract being very dark and viscous. As a result, p-Terphenyl-d14 was diluted out of the acceptance limits and the data results have been reported.

Sample 242654018 recovered 2,4,6-Tribromophenol at 108% (limits are 37%-106%) and p-Terphenyl-d14 at 131% (limits are 40%-124%).Since sample 242654018 was biased high for 2,4,6-Tribromophenol and p-Terphenyl-d14 and there were no target analytes detected in the sample, the data results have been reported.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

QC Sample Designation
Sample 242654001 (RE03-09-14224) was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike (MS) Recovery Statement
One MS(1201993836) spike recovery were not within the acceptance limits. Please see the QC Summary for specific value. The MSD(1201993837) displayed a similar recovery. Therefore, the failure was attributed to matrix interference and the data were reported.

Matrix Spike Duplicate (MSD) Recovery Statement
Two MSD(1201993837) spike recoveries were not within the acceptance limits. Please see the QC Summary for specific values. The MS(1201993836) displayed similar recoveries. Therefore, the failures were attributed to matrix interference and the data were reported.

MS/MSD Relative Percent Difference (RPD) Statement
The MS(1201993836)/MSD(1201993837) RPD value for 3,3'Dicholorobenzidine was 35%. The limit is 30%. The RPD failure was attributed to matrix interference and the data results have been reported.

Internal Standard (ISTD) Acceptance
The internal standard responses were outside of the acceptance criteria for the following samples: 242654007 (RE03-09-14267), 242654008 (RE03-09-14265) and 242654016 (RE03-09-14271). The samples were re-analyzed and the failures were confirmed. The first analysis data were reported. The re-analysis raw data have been placed in the Miscellaneous Section.

The internal standard responses were outside of the acceptance criteria for the following sample: 242654018 (RE03-09-14285). The sample was re-analyzed and the failures were confirmed. The second analysis data were reported because the first analysis fell outside the tune window.

The internal standard responses were outside of the acceptance criteria for the following samples: 242654009 (RE03-09-14281), 242654010 (RE03-09-14284), 242654011 (RE03-09-14274), 242654012 (RE03-09-14277), 242654013 (RE03-09-14282), 242654014 (RE03-09-14269), 242654015 (RE03-09-14273), 242654017 (RE03-09-14278), 242654019 (RE03-09-14286) and 242654020 (RE03-09-14283). The samples were re-analyzed and the failures did not confirm. The re-analysis data have been reported.

Technical Information

Holding Time Specifications
All samples in this SDG met the specified holding time. GEL assigns holding times based on the associated methodology that assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
Sample 242654008 (RE03-09-14265) was diluted because the extract was very dark and viscous.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG except for confirmations and/or dilutions.

Miscellaneous Information

Nonconformance (NCR) Documentation
The following NCR was generated for this SDG: 770889. It is located in the Miscellaneous Section of the data report.

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations. Please see the raw data in the Miscellaneous Section.

Additional Comments
Additional comments were not required for this SDG.

Electronic Package Comment
The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

System Configuration
The samples reported in this SDG were analyzed on one or more of the following instrument systems. Instrument systems are referenced in the raw data and individual form headers by the Instrument ID designations listed below:

Instrument ID	Instrument	System Configuration	Column ID	Column Description
MSD3.I	HP Mass Spectrometer	HP7890A/HP5975C	DB-5MS	25m x 0.2mm, 0.33um (5% Phenylmethylpolysiloxane)

Certification Statement
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.
