File Name (owner): NOD Response to MDA V		Time: AM or PM
Person: Becky Coel-Roback; Firm: LANL	Phone No.: 665-5011	Recorded By: KMC

Subject: NOD Response (LANL) to MDA V NOD from NMED

Remarks:

NMED had questions regarding comment 4 and 5 of LANL NOD response:

1) If depth of beds is 11.5', will 12' of excavation be enough?
   - drilling logs only show one place (bed 3, location 21-2521) where bed materials appear at 11.5'
   - Not a final remedy
   - Risk guidance (EPA) requires only 12', however they will characterize deeper than that
   - They will determine nature and extent, and if NMED determines they haven't, they will go back

2) Need clarification regarding excavation of block of glass in bed 1:
   - 20 x 30 x 10 block of glass
   - it is located 10'-20' bgs.
   - They suggest that they will excavate down to 12' bgs and strip/jack hammer off top 2' of glass block.
   - Becky says it will get rid of transition material btw glass and soil.

Action Required:

Action Taken: - They have data (in TM report) which shows that there is no change in contaminant levels underneath + around the block.
