Re: Contract No. 12631-0011 2P

Dear Ms. Valdez:

I am sending you the data package for the soil samples for release # 3202S that were analyzed for Organic parameters.

General Engineering Laboratories appreciates this opportunity to provide you with analytical results, and trusts that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 769-7391.

Yours very truly,

Valerie S. Davis
Project Manager

Summary:

Sample receipt

The samples for Los Alamos National Laboratory SMO release #3202S arrived at General Engineering Laboratories, LLC., (GEL) Charleston, South Carolina on May 5, 2005 for environmental analyses. The sample containers arrived without any visible signs of tampering or breakage. The sample containers were received at 2°C temperature.

The laboratory received the following samples:

Laboratory Identification	Sample Description
135831001	RE03-05-58926
135831002	RE03-05-58927
135831003	RE03-05-59557
135831004	RE03-05-59558
135831005	RE03-05-58928

2

Internal Chain of Custody:

Custody was maintained for the samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Chain of Custody, Cooler Receipt Checklist, Data Qualifier Review Sheet, Volatile Analysis, Semivolatile Analysis, FID Analysis, PCB Analysis, and TPH-GRO Analysis.

I certify that this data report is in compliance with the terms and conditions of the subcontract and task order, both technically and for completeness, for other than the conditions detailed in the attached case narrative.

Valerie S. Davis

DATA REVIEW QUALIFIER FLAG DEFINITION SHEET

General Engineering Laboratories, LLC

DATA QUALIFIERS FOR ORGANIC ANALYSES

Data Qualifiers used on Form 1s or Certificates of Analysis (COA) follow the specifications set forth in the technical specifications of the most current CLP Statement of Work and are defined as follows:

Section	Explanation	Location
A	The TIC is suspected aldol-condensation product.	COA, Form 1, and EDD
B	Analyte was detected in the associated method blank as well as in the sample.	COA, Form 1, and EDD
C	Pesticide analyte has been confirmed by GC/MS.	COA, Form 1, and EDD
D	Analyte(s) quantified in an analysis performed at a secondary dilution factor.	COA, Form 1, and EDD
E	Identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.	COA, Form 1, and EDD
J	This flag indicates an estimated value concerning either, (1) estimating a concentration for tentatively identified compounds (TICs), or (2) analyte detected at a level less than the RDL or PQL and greater than or equal to the MDL.	COA, Form 1, and EDD
N	Presumptive evidence based upon a mass spectral library search to make a tentative identification of the analyte.	COA, Form 1, and EDD
NJ	Analyte has been tentatively identified and the associated numerical value is estimated based upon 1:1 response factor to the nearest eluting internal standard.	COA, Form 1, and EDD
P	- Pesticide/PCB target analyte that is greater than 25% difference for the detected concentrations between the two GC columns. - HPLC target analyte that is greater than 40% difference for the detected concentrations between detectors or columns.	Form 1 and EDD
U	Compound analyzed for but not detected (sample quantitation limit has been adjusted to reflect dilutions and percent moisture).	COA, Form 1, and EDD
X	Other reporting flag as defined in report narrative.	COA, Form 1, and EDD
**	Laboratory Control Sample recovery outside of acceptance limit.	QC Summary Report

All surrogate recoveries and acceptance ranges are reported at the bottom of Form 2 or COA.

GC/MS VOLATILE ANALYSIS

GC/MS Volatile Organics
Los Alamos National Laboratory (LANL)
SDG 3202S

Method/Analysis Information

Procedure:	Volatile Organic Compounds (VOC) by Gas Chromatography/Mass Spectrometer
Analytical Method:	SW846 8260B
Prep Method:	SW846 5035
Analytical Batch Number:	425470
Prep Batch Number:	425465

Sample Analysis

The following client and quality control samples were analyzed to complete this SDG using the methods referenced in the Analysis Information section:

Sample ID	Client ID
135831001	RE03-05-58926
135831002	RE03-05-58927
135831003	RE03-05-59557
135831004	RE03-05-59558
135831005	RE03-05-58928
1200846374	Method Blank (MB)
1200846405	Laboratory Control Sample (LCS)
1200846375	Laboratory Control Sample (LCS)
1200846406	Laboratory Control Sample Duplicate (LCSD)

Preparation/Analytical Method Verification

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV# 9.

Calibration Information
Due to the limited capacity of software all of the current initial calibration files are not displayed here. If necessary, a calibration history will be inserted in the package prior to the appropriate Form 6.

Initial Calibration
All initial calibration requirements have been met for this sample delivery groups (SDG). A second source initial

calibration verification (ICV) was included in the standard section directly behind the initial calibration.

Continuing Calibration Verification Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
The surrogate recoveries in all client samples and quality control samples were within the acceptance limits except for Dibromofluoromethane and Bromofluorobenzene in sample 135831002 (RE03-05-58927). Sample reanalysis confirmed possible matrix interference.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCS duplicate recoveries were within the acceptance limits, except for Acetone and Tetrachloroethylene. The LCS duplicate meets the recovery requirements per the client SOW.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
Spike analyses were not performed in this SDG due to lack of additional sample volumes.

Internal Standard (ISTD) Acceptance
1,4-Dichlorobenzene-d4 internal standard response was below the required acceptance criteria in sample 135831002 (RE03-05-58927). Sample reanalysis confirmed possible matrix interference.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Sample Preservation and Integrity
All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Samples were reanalyzed in this SDG due to internal standard responses and/or surrogate recoveries.

Miscellaneous Information

Electronic Package Comment
The following package was generated using an electronic data processing program referred to as virtual packaging.

In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:
Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation
A nonconformance report (NCR ID 202717) was generated for this SDG.

Manual Integrations
Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment
The tentatively identified compounds may include silanols. These compounds were due to column or septum bleed and were not native to the affected samples.

Additional Comments
The laboratory is in the process of adding an additional surrogate compound. Currently the compound appears as a tentatively identified compound (TIC) in the sample library search at 10 minutes. The laboratory eliminated this peak as a TIC from the Form 1.

System Configuration

The Volatile-GC/MS analysis was performed on a Volatile Organic Analysis by Gas Chromatography/Mass Spectroscopy.

Instrument ID	System Configuration	Column ID	Column Description	P & T Trap
VOA1.I	HP6890/HP5973	RESTEK	RTX-Volatiles, 30m x 0.25 mm, 1.0um	Trap 10

Certification Statement

When the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Pat Steele Date: 06-02-05

Roadmap for LANL 3202S VOA

This roadmap was analyzed by Tammy Woodie on 05-17-2005, 22:56.
This roadmap was reviewed by Kelle Bellamy on 05-18-2005, 10:47.
This roadmap was packaged by LySandra Gathers on 05-23-2005, 15:18.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

COMPANY – WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
17-MAY-05	Federal	Specifications	Process
Instrument Type:	**Test / Method:**	**Matrix Type:**	**Client Code:**
VOA GC/MS	SW846 8260B	Solid	LANL
Batch ID:	**Sample Numbers:**		
425470	See Below		

Potentially affected work order(s)(SDG): 135805(3194S),135831(3202S),136007(3205S),136326(3228S)

Application Issues:

Failed Recovery for LCS/MS/PS

Specification and Requirements Nonconformance Description:	NRG Disposition:
Laboratory Control Sample (LCS) Recovery The laboratory control samples did not recover all spiking analytes within the acceptance limits.	The failures were less than 5% of the requested analyte list. This satisfies the client criteria. Please see the Form III in the deliverable for a complete list of failures and the recovery limits.
Laboratory Control Sample Duplicate (LCSD) Recovery The laboratory control sample duplicates did not recover all spiking analytes within the acceptance limits.	The failures were less than 5% of the requested analyte list. This satisfies the client criteria. Please see the Form III in the deliverable for a complete list of failures and the recovery limits.

GC/MS SEMIVOLATILE ANALYSIS

Semi-Volatile Case Narrative
Los Alamos National Laboratory (LANL)
SDG 3202S

Method/Analysis Information

Procedure:	Semi-volatile Analysis by Gas Chromatograph/Mass Spectrometer
Analytical Method:	SW846 8270C
Prep Method:	SW846 3550B
Analytical Batch Number:	423903
Prep Batch Number:	423902

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8270C:

Sample ID	Client ID
135831001	RE03-05-58926
135831002	RE03-05-58927
135831003	RE03-05-59557
135831004	RE03-05-59558
1200842643	Method Blank (MB)
1200842644	Laboratory Control Sample (LCS)
1200842645	135831001(RE03-05-58926) Matrix Spike (MS)
1200842646	135831001(RE03-05-58926) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, LLC (GEL) as Standard Operating Procedure (SOP) GL-OA-E-009, Rev. 14.

Calibration Information

Due to software limitations, the files displayed at the beginning of the Form 6 are only the last files uploaded for each individual level. A complete listing of all files used in the current ICAL are shown on the Calibration History

that is included with each Level 4 or higher package. The last file by date in each level is the one currently uploaded for that level.
Diphenylamine has now superseded N-Nitroso-diphenylamine as a CCC on Quantitation Reports, Initial Calibration Reports, Calibration Check Standard Reports, etc. Previous versions of EPA Method 8270 (prior to 8270C) listed N-Nitroso-diphenylamine as a CCC. However, as stated in EPA Method 8270C, Revision 3, December, 1996, Section 1.4.5, "N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine." Studies of these two compounds at GEL, both independent of each other and together, show that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine will be reported as Diphenylamine on all reports and forms.

When calibrations are performed for Appendix IX compounds some of the compounds may not be calibrated exactly according to the criteria in Method 8270C. If the %RSD is greater than 15% or the correlation coefficient is less that 0.99 then the analyte is quantitated using the response factor. If the analyte is detected then the sample is re-analyzed for that analyte on an instrument that is compliant with the criteria in the method.

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

CCV Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
The surrogate recoveries met the acceptance limits.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

QC Sample Designation
Sample 135831001 (RE03-05-58926) was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike (MS) Recovery Statement
The MS recovered multiple analytes outside the acceptance limits. The LCS met the acceptance criteria but the MSD recovered multiple analytes outside the acceptance limits. Therefore, the failures were attributed to matrix interference and the results were reported.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recovered multiple analytes outside the acceptance limits. The LCS met the acceptance criteria but the MS recovered multiple analytes outside the acceptance limits. Therefore, the failures were attributed to matrix interference and the results were reported.

MS/MSD Relative Percent Difference (RPD) Statement
The MS/MSD RPD values did not meet the acceptance criteria. The failures were attributed to matrix interference and the results were reported.

Internal Standard (ISTD) Acceptance
The internal standard responses were outside of the acceptance criteria for the following samples: 135831002 (RE03-05-58927) and 135831004 (RE03-05-59558). The samples were re-analyzed and confirmed the failures were the result of matrix interference. Only the original sample analyses were reported. The confirmation analysis raw data results are located in the Miscellaneous Section of the data report.

Technical Information:

Holding Time Specifications
All samples in this SDG met the specified holding time. GEL assigns holding times based on the associated methodology that assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
Samples 1200842645 (RE03-05-58926), 1200842646 (RE03-05-58926), 135831001 (RE03-05-58926), 135831002 (RE03-05-58927), 135831003 (RE03-05-59557) and 135831004 (RE03-05-59558) were diluted because the extracts were very dark and viscous.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG except for confirmations and/or dilutions.

Miscellaneous Information:

Nonconformance (NCR) Documentation
A nonconformance report (NCR) was not generated for this SDG.

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations. Please see the raw data in the Miscellaneous Section.

Additional Comments
Additional comments were not required for this SDG.

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

System Configuration

The laboratory utilizes a HP 6890 Series gas chromatograph and a HP 5973 Mass Selective Detector. The configuration is equipped with the electronic pressure control. All MS interfaces are capillary direct.
Chromatographic Columns

Chromatographic separation of semi-volatile components is accomplished through analysis on one or more of the following columns (all with dimensions of 30 meters x 0.25 millimeters ID and 0.25 micron film except J&W DB-5MS2 which is 25 meters x 0.20 mm ID and 0.33 micron film):

Column ID	Column Description
J&W	DB-5.625(5% Phenyl)-methylpolysiloxane (identified by a DB-5.625 designation on quantitation reports and reconstructed ion chromatograms)
J&W DB-5MS	Similar to the J&W DB-5.625 with low bleed characteristics (identified by a DB-5MS designation)
Alltech	EC-5 (SE-54) 5% Phenyl, 95% Methylpolysiloxane (identified by a HP-5MS designation)
HP	HP-5MS 5% Phenylmethylsiloxane (identified by a HP-5MS designation)
Phenomenex	ZB-5 5% Phenyl Polysiloxane (identified by a ZB-5 designation)
J&W DB-5MS2	Similar to the J&W DB-5.625 with low bleed characteristics (identified by a DB-5MS2 designation)

Instrument Configuration

The samples reported in this SDG were analyzed on one or more of the following instrument systems. Instrument systems are referenced in the raw data and individual form headers by the Instrument ID designations listed below:

The Semi-Volatiles-GC/MS analysis was performed on a HP Mass Spectrometer.

Instrument ID	System Configuration	Column ID	Column Description
MSD8.I	HP6890/HP5973	DB-5MS	25m x 0.2mm, 0.33um (5% Phenylmethylpolysiloxane)

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

Reviewer: David B. Beachey **Date:** 6-3-05

Roadmap for LANL 3202S SVOA

This roadmap was analyzed by Chris Kerr on 05-27-2005, 08:54.
This roadmap was reviewed by Cameron Bearden on 05-27-2005, 14:35.
This roadmap was packaged by Sherri Brown on 06-01-2005, 13:51.

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.

QC Flag Legend

a - Target compound detected but, quantitated amount Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.

GC SEMIVOLATILE DRO ANALYSIS

DRO Case Narrative
Los Alamos National Laboratory (LANL)
SDG 3202S

Method/Analysis Information

Procedure:	**Non-Volatile Total Petroleum Hydrocarbons by Flame Ionization Detector**
Analytical Method:	SW846 8015A/B SVOC
Prep Method:	SW846 3550B
Analytical Batch Number:	423035, 423910
Prep Batch Number:	423034, 423909

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8015A/B SVOC:

Sample ID	Client ID
135831001	RE03-05-58926
135831002	RE03-05-58927
135831003	RE03-05-59557
135831004	RE03-05-59558
1200840424	Method Blank (MB) in batch 423035
1200842656	Method Blank (MB) in batch 423910
1200840425	Laboratory Control Sample (LCS) in batch 423035
1200842657	Laboratory Control Sample (LCS) in batch 423910
1200840426	135831001(RE03-05-58926) Matrix Spike (MS) in batch 423035
1200840427	135831001(RE03-05-58926) Matrix Spike Duplicate (MSD) in batch 423035
1200842660	135831003(RE03-05-59557) Matrix Spike (MS) in batch 423910
1200842661	135831003(RE03-05-59557) Matrix Spike Duplicate (MSD) in batch 423910

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, LLC. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All calibration verification standards (CVS, ICV, or CCV) requirements have not been met for this SDG.

Some target analytes failed with a positive bias in the standards bracketing the samples in this SDG. The positive bias for the analytical data is a result of the instrument response increasing after the initial calibration. All samples were re-analyzed and the standard failed in the same manner, confirming matrix interference.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were not within the acceptance criteria. Samples 1200840426 (RE03-05-58926MS), 1200840427 (RE03-05-58926MSD), 135831001 (RE03-05-58926), 135831002 (RE03-05-58927), 1200842660 (RE03-05-59557MS), 1200842661 (RE03-05-59557MSD), 135831003 (RE03-05-59557) and 135831004 (RE03-05-59558) did not meet surrogate recovery acceptance criteria due to matrix interference associated with high level hits of Diesel Range Organics, and/or the presence of hydrocarbons heavier than diesel. See NCRs #201969 and #202768 located in the Miscellaneous Section.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

QC Sample Designation
Samples 135831001 (RE03-05-58926) and 135831003 (RE03-05-59557) were selected for analysis as the matrix spike and matrix spike duplicate analyses.

Matrix Spike (MS) Recovery Statement
The MS recoveries for this SDG were not within the acceptance limits due matrix interference and dilution. The matrix spike duplicate confirms the failure.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries for this SDG were not within the acceptance limits due matrix interference and dilution. The MS confirms the failure.

MS/MSD Relative Percent Difference (RPD) Statement
The RPD(s) between the MS and MSD met the acceptance limits in batch 423035. The RPD between the MS and MSD in batch 423910 were not within acceptance criteria due to matrix interference and dilution. See NCR #201969 located in the Miscellaneous Section.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
All samples in this SDG were diluted due to the oily matrix of the samples.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Nonconformance (NCR) Documentation
NCRs # 202768 and #201969 have been generated for this SDG.

Manual Integrations
Certain standards and QC samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction.

Additional Comments
The additional comments field is used to address special issues associated with each analysis, clarify method/contractual issues pertaining to the analysis, and to list any report documents generated as a result of sample analysis or review. The following additional comments were required:

Samples 1200840426 (RE03-05-58926MS), 1200840427 (RE03-05-58926MSD), 135831001 (RE03-05-58926), 135831002 (RE03-05-58927), 1200842660 (RE03-05-59557MS), 1200842661 (RE03-05-59557MSD), 135831003 (RE03-05-59557) and 135831004 (RE03-05-59558) contained hydrocarbons heavier than diesel.

Due to software limitation, the Form VIIs will display the results either in the % difference or % drift depending on the type of the calibration curve. If the curve of all analytes is generated using an average response factor (RF), the Form VII will display results using the %difference calculation (RF). If the curve of one or more analytes is generated using a linear curve, the Form VII will display results using the % drift calculation (by concentration) for all analytes.

System Configuration

The GC-FID analysis was performed on a HP Gas Chromatograph.

Instrument ID	System Configuration	Column ID	Column Description
FIDA.I	HP5890 Series II FID	J&W DB-Wax	30m x 0.53mm, 0.5um
FIDA.I	HP5890 Series II FID	ZB-5	30m x 0.25mm, 0.25um (Phenomenex)
FIDA.I	HP5890 Series II FID	J&W BD-624	75m x 0.53mm, 1.4um

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

NCR Report No.: 201969
Revision No.: 1

COMPANY – WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
16-MAY-05	Federal	Specifications	Process
Instrument Type: GC/FID	**Test / Method:** SW846 8015A/B SVOC	**Matrix Type:** Solid	**Client Code:** AMOC, BOSH, EAEN, LANL,
Batch ID: 423910	**Sample Numbers:** See Below		

Potentially affected work order(s)(SDG): 135831(3202S),135841,136036,136119,136181

Application Issues:

Failed Recovery for Surrogate or Tracer

Failed Recovery for LCS/MS/PS

Failed RPD for LCS/LCSD, MS/MSD, or PS/PSD

Failed CCV or CCB

Specification and Requirements Nonconformance Description:	NRG Disposition:
1. Failed Recovery for MS: QC 1200842658MS QC 1200842660MS	1. The spike recoveries for the indicated MS's were not within the acceptance limits. The failures for each were confirmed by their respective matrix spike duplicates, therefore the failures are attributed to matrix interference.
2. Failed RPD for MSD: QC 1200842661MSD	2. The relative percent difference between MS 1200842660 and MSD 1200842661 was not within acceptance limits due to matrix interferences and sample extract dilutions of 1:50.
3. Failed Recovery for Surrogate: QC 1200842658MS QC 1200842659MSD QC 1200842660MS QC 1200842661MSD 135831 003, 004 135841 001, 002, 003, 004, 005, 006 136181 001, 003, 004	3. The indicated samples failed surrogate recoveries due to matrix interferences associated with high level hits for Diesel Range Organics, as well as the presence of hydrocarbons heavier than diesel.
4. Failed CCV: 135831 004	4. All calibration verification standardss (CVS, ICV, or CCV) requirements have not been met for this SDG. Some target analytes failed acceptance criteria with a positive bias in the standards bracketing the samples in this SDG. The positive bias for the analytical data is a result of instrument response increasing after the initial calibration. All samples bracketted by this failing standard were re-analyzed and the standard failed in the same manner, confirming matrix interference.

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
135831001	RE03-05-58926
135831002	RE03-05-58927
135831003	RE03-05-59557
135831004	RE03-05-59558
1200850346	Method Blank (MB)
1200850348	Laboratory Control Sample (LCS)
1200850347	Method Blank (MB)
1200850349	Laboratory Control Sample (LCS)
1200846634	135805001(RE03-05-59531) Matrix Spike (MS)
1200846635	135805001(RE03-05-59531) Matrix Spike Duplicate (MSD)

Gasoline Range Organics will be designated as GRO throughout this case narrative.

Preparation/Analytical Method Verification
Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, LLC. (GEL) as Standard Operating Procedures (SOP).

Calibration Information
Due to the limited capacity of software, all of the current initial calibration files may not be displayed. If necessary, a calibration history report was inserted, prior to the appropriate Form 6, in the Standards section in the data package.

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

CCV Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
Target analytes were detected in the blank below the reporting limit.

Surrogate Recoveries
Sample 135831002 (RE03-05-58927) failed surrogate recoveries. The sample was re-analyzed and confirmed the failures. Please see the Form II in the deliverable for a complete list of failures and the recovery limits. See NCR 203021.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

QC Sample Designation
Client sample 135805001 (RE03-05-59531) was selected for analysis.

Matrix Spike (MS) Recovery Statement
The MS recoveries were not within the acceptance limits. The MSD recovered in a similar manner. Please see the Form III in the deliverable for a complete list of failures and the recovery limits. See NCR 203021.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries were not within the acceptance limits. The MS recovered in a similar manner. Please see the Form III in the deliverable for a complete list of failures and the recovery limits. See NCR 203021.

MS/MSD Relative Percent Difference (RPD) Statement
The RPD(s) between the MS and MSD met the acceptance limits.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Sample 135831002 (RE03-05-58927) was re-analyzed due to surrogate failures.

Miscellaneous Information

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

Nonconformance report (NCR) 203021 was generated for this SDG.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

Additional Comments

Additional comments were not required for this SDG.

System Configuration

The laboratory utilizes the following gas chromatographic configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through the following column:

Column ID	Column Description
J&W2	DB-624(0.53mm x 3.0u x 15m)

Instrument Configuration

Instrument systems are referenced in the raw data and individual form headers by the Instrument ID designation below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOC1	Tracor 540 GC PID/FID	J&W	Tekmar #1

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Erin Lambert Date: 5/31/05

COMPANY – WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
18-MAY-05	Federal	Specifications	Process
Instrument Type:	**Test / Method:**	**Matrix Type:**	**Client Code:**
VOC/FID	SW846 8015A/B VOC	Solid	LANL
Batch ID:	**Sample Numbers:**		
425588	See Below		

Potentially affected work order(s)(SDG): 135805(3194S),135831(3202S)

Application Issues:

Failed Recovery for Surrogate or Tracer

Failed Recovery for LCS/MS/PS

Method Blank contamination

Specification and Requirements Nonconformance Description:	NRG Disposition:
Surrogate Recoveries Sample 1200846634 (RE03-05-59531MS) failed surrogate recoveries.	The sample was re-analyzed and confirmed the failures. The MSD and associated sample recovered this surrogate at the lower end of the acceptance limits. Please see the Form II in the deliverable for a complete list of failures and the recovery limits.
Sample 135831002 (RE03-05-58927) failed surrogate recoveries.	The sample was re-analyzed and confirmed the failures. Please see the Form II in the deliverable for a complete list of failures and the recovery limits. See NCR 203021.
Matrix Spike (MS) Recovery Statement The MS recoveries were not within the acceptance limits.	The MSD recovered in a similar manner. Please see the Form III in the deliverable for a complete list of failures and the recovery limits.
Matrix Spike Duplicate (MSD) Recovery Statement The MSD recoveries were not within the acceptance limits.	The MS recovered in a similar manner. Please see the Form III in the deliverable for a complete list of failures and the recovery limits.

GC SEMIVOLATILE PCB ANALYSIS

PCB Case Narrative
Los Alamos National Laboratory (LANL)
SDG 3202S

Method/Analysis Information

Procedure:	Polychlorinated Biphenyls by ECD
Analytical Method:	SW846 8082
Prep Method:	SW846 3550B
Analytical Batch Number:	423332
Prep Batch Number:	423330

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8082:

Sample ID	Client ID
135831001	RE03-05-58926
135831002	RE03-05-58927
135831003	RE03-05-59557
135831004	RE03-05-59558
1200841140	Method Blank (MB)
1200841141	Laboratory Control Sample (LCS)
1200841151	135831001(RE03-05-58926) Matrix Spike (MS)
1200841152	135831001(RE03-05-58926) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, LLC. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All calibration verification standards (CVS, ICV, or CCV) requirements have not been met for this SDG.

Two of five peaks failed with a negative bias on one analytical column in the Aroclor-1254 standard analyzed on 05/11/05 at 1428; however, the average amount of the five peaks met the acceptance criteria.

One or more of five peaks failed with a negative bias on one analytical column in the Aroclor-1016 and Aroclor-1260 standards analyzed on 05/12/05 at 0017 and at 1902; however, the average amount of the five peaks met the acceptance criteria.

Aroclor-1260 failed acceptance criteria with a negative bias on one analytical column in the standards bracketing the samples in this SDG. The negative bias for the analytical data is a result of instrument response decreasing after the initial calibration. All samples with results greater than the PQL were re-analyzed and the bracketing standard failed in the same manner; therefore, the standard failure is attributed to matrix interference.

Decachlorobiphenyl (DCB) surrogate failed acceptance criteria in the standard bracketing the samples in this SDG. However, this non-compliance has no adverse effects on the data.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
Samples 1200841151 (RE03-05-58926MS), 1200841152 (RE03-05-58926MSD), and 135831001 (RE03-05-58926) failed to meet the surrogate recovery acceptance criteria. Since the MS and MSD were performed on this sample and failed in the same manner, this failure is attributed to sample matrix interference and the data is reported as is. Samples 135831002 (RE03-05-58927), 135831003 (RE03-05-59557) and 135831004 (RE03-05-59558) did not meet the surrogate recovery acceptance criteria due to dilution.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

QC Sample Designation
Sample 135831001 (RE03-05-58926) was selected for the matrix spike and matrix spike duplicate analysis.

Matrix Spike (MS) Recovery Statement
The MS recoveries for this SDG were within the established acceptance limits.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries for this SDG were within the established acceptance limits.

MS/MSD Relative Percent Difference (RPD) Statement
The RPD(s) between the MS and MSD met the acceptance limits.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP. All sample extracts were cleaned using alumina.

Sample Dilutions
Samples 1200841151 (RE03-05-58926MS), 1200841152 (RE03-05-58926MSD), 135831001 (RE03-05-58926), 135831002 (RE03-05-58927), 135831003 (RE03-05-59557) and 135831004 (RE03-05-59558) were diluted at 1:10 due to the oily matrix of the extracts.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation
Nonconformance reports (NCRs) are for documentation of any procedural anomalies that may deviate from referenced SOP or contractual document. A NCR was not required for this SDG.

Manual Integrations
Certain standards and samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this PCB fraction.

Additional Comments
The additional comments field is used to address special issues associated with each analysis, clarify method/contractual issues pertaining to the analysis, and to list any report documents generated as a result of sample analysis or review. The following additional comments were required:

The higher results from either column has been chosen and reported in the data package.

Aroclors quantitated on the raw data report by the Target data system do not necessarily represent a positive aroclor identification. In order for positive identification to be made, the aroclor must match in pattern and retention time; as well as quantitate relatively close between the primary and confirmation columns, as specified in SW846 method 8000. When these conditions are not met, the aroclor is reported as a non-detect on the data report. These situations will be noted on the raw data as DMP, representing does not match pattern, or DNC does not confirm.

Due to software limitation, the Form VIIs will display the results either in the % difference or % drift depending on the type of the calibration curve. If the curve of all analytes is generated using an average response factor (RF), the Form VII will display results using the %difference calculation (RF). If the curve of one or more analytes is generated using a linear curve, the Form VII will display results using the % drift calculation (by concentration) for all analytes.

System Configuration

The Semi-Volatiles-PCB analysis was performed on a HP Gas Chromatograph.

Instrument ID	System Configuration	Column ID	Column Description
ECD8A.I_1	HP6890 Series ECD	Rtx-CLP I	30m x 0.25mm, 0.25um (Rtx-CLPesticide I)
ECD8A.I_2	HP6890 Series ECD	Rtx-CLP II	30m x 0.25mm, 0.20um (Rtx-CLPesticide II)

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: _____ Date: 5/19/15

Roadmap for LANL 3202S PCB

This roadmap was analyzed by Jared Wagner on 05-13-2005, 15:38.
This roadmap was reviewed by Gwen Hallquist on 05-13-2005, 18:37.
This roadmap was packaged by Yvette Lampkin on 05-17-2005, 10:42.

INITIAL CALIBRATION DATA

Start Cal Date : 03-FEB-2005 10:58
End Cal Date : 09-MAY-2005 11:46
Quant Method : ESTD
Origin : Disabled
Target Version : 3.50
Integrator : Falcon
Method file : /chem/ecd8a.i/051205.b/ECD8-B-8082-050905.m
Cal Date : 13-May-2005 12:07 jar00935
Curve Type : Average

Rad Screening Data Release Form

The Following samples were received at the Field Support Facility (FSF) without screening data (list sample number):

36NSE1

These samples will not be shipped until radiological screening data documentation arrives at the FSF. I understand that it is my responsibility to ensure this information arrives at the FSF in a timely manner. If holding times are missed because screening data does not arrive, I will pick up the samples.

The following samples do not require rad screening data for the reasons stated (list sample numbers):

36 NSW1
36 NSW2
36 SFD1
36 SSE1
36 SSW1
36 SSW2
36 SFD2

Notes:

Comments:

1.0) Soil and Sludge analysis are reported on a wet basis or an as received basis unless otherwise indicated.
2.0) The data in this report are within the limits of uncertainty specified in the reference method unless specified.
3.0) Modified analysis procedures are procedures that are modified to meet the certain specifications. An example may be the use of a water method to analyze a solid matrix due to the lack of an officially recognized procedure for the analysis of the solid matrix.
4.0) Derived Air Concentrations and Effluent Release Concentrations are obtained from 10 CFR 20 Appendix B.
5.0) Total activity is actually total gamma activity and is determined utilizing the prominent gamma emitters from the naturally occurring radioactive decay chains and other prominent radioactive nuclides. Total activity may be lower than actual total activity due to the extent of secular equilibrium achieved in the various decay chains at the time of analysis. The total activity is not representative of nuclides that emit soley alpha or beta particles.
6.0) Ra-228 is determinded via secular equilibrium with its daughter, Actinium 228. (Gamma Spectroscopy only).
7.0) U-238 is determined via secular equilibrium with its daughter, Thorium 234. (Gamma Spectroscopy only).
8.0) All Gamma spectroscopy was performed utilizing high purity germanium detectors (HPGE).

CCS AND VALIDATION

Explanation of qualifiers (Q):

U The analyte was analyzed for but not detected above the reported EQL

J The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample
J+ Likely has a high bias
J- Likely has a low bias

UJ The analyte was analyzed for but not detected. The associated value is an estimate

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. Presence or absence cannot be verified. Note: Any results qualified as "R" should be looked at for relevance for data use. Thus, "R" implies "PM" also, and must not be used alone

P Use professional judgement based on data use . It usually has an "M"with it, indicating that a manual check should be made if the data that is qualified with the "P" is important to the data user.

In addition, PM also means that a decision must be made by the project manager/delegee regarding the need for further review of the data. This review should include some consideration of potential impact that could result from using the P qualified data. (For example, in the case of holding time excedance, the project manager/delegee can decide to use the data with no qualification when analyltes of interest are known to not be adversely affected by holding time exceedances. Another example is the case where soil sample duplicate analyses for metals exceed the precision criteria. Since this is likley because of sample non-homogeneity rather than lab error, the manager/delegee must decide how to use the data.)

PM Manual review of raw data is recommended to determine if the defect impacts data use, as in "R" above.

REASON CODES FOR VALIDATION QUALIFIERS

ORGANOCHLORINE PESTICIDES/AROCLORS (P)

3 Surrogate % recovery > upper limit, which indicates a potential high bias in the results and a potential for false positive results.

3a Surrogate % recovery is > 10% but < the lower limit, which indicates a potential low bias in the results.

3b Surrogate % recovery < 10%, which indicates an increased potential low bias in the results..

3c Result is non-detect and the surrogate % recovery > 10 % but < lower limit, which indicates a potential for false negative results.

3d Result is a non-detect and the surrogate recovery < 10%, which indicates a greatly increased potential for false negative results.

4 Sample result > EQL and < 5X the concentration of the related analyte in the blank, which indicates the reported detection is considered to be indistinguishable from blank contamination.

5 Sample result < EQL and < 5X (10X as above) the concentration of the analyte in the blank, which indicates the detected result was indistinguishable from blank contamination and the detected result was changed to non-detected at the EQL.

5a Sample result > EQL and > 5X (10X as above) the concentration of the analyte in the blank, which indicates the reported result is not likely to be related to the contamination in the associated blank.

6 % RSD or % D exceeds the specification - apply to a positive result, which indicates potential quantitation problems in the analyses and the potential for false positive results.

7 % RSD or %D exceeds the specification - apply to a non-detect, which indicates potential quantitation problems in the analyses and the potential false negative results.

8. Analyte concentration exceeds linear range and sample not diluted to within that range. This usually results in a negative bias in the reported concentratiion.

9. Holding time is exceeded. An evaluation of the data of interest with respect to holding time exceedance impact (technically) is recommended. Factors to consider include sample preservation, sample storage practices, use of the data, levels of contamination found in the sample, and the physical, chemical, and biological stability of the target analytes in the sample matrix.

10. Breakdown criteria have been exceeded, indicating poor instrument performance which can result in a low bias in the reported results and potential false negative results for labile compounds and potential false positive results for breakdown procucts.

11. Surrogate retention time has shifted by > 0.05 minutes, possibly affecting analyte identification and causing false positives or negatives.

CCS AND VALIDATION

Explanation of qualifiers (Q):

U The analyte was analyzed for but not detected above the reported EQL

J The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample
J+ Likely has a high bias
J- Likely has a low bias

UJ The analyte was analyzed for but not detected. The associated value is an estimate

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. Presence or absence cannot be verified. Note: Any results qualified as "R" should be looked at for relevance for data use. Thus, "R" implies "PM" also, and must not be used alone

P Use professional judgement based on data use . It usually has an "M"with it, indicating that a manual check should be made if the data that is qualified with the "P" is important to the data user.

In addition, PM also means that a decision must be made by the project manager/delegee regarding the need for further review of the data. This review should include some consideration of potential impact that could result from using the P qualified data. (For example, in the case of holding time excedance, the project manager/delegee can decide to use the data with no qualification when analyltes of interest are known to not be adversely affected by holding time exceedances. Another example is the case where soil sample duplicate analyses for metals exceed the precision criteria. Since this is likley because of sample non-homogeneity rather than lab error, the manager/delegee must decide how to use the data.)

PM Manual review of raw data is recommended to determine if the defect impacts data use, as in "R" above.

REASON CODES FOR VALIDATION QUALIFIERS

VOLATILES (V)

0 The internal standard retention time has shifted by more than ±30 seconds, which could affect compound identification and cause false positives or negatives.

1 The internal standard area count for the quantitating internal standard is outside the - 50, + 100 % window in relation to the previous continuing calibration, which could affect the accuracy of the quantitation of the associated analytes and the correct quantiitatiion of surrogate recoveries.

1a Non-detected results, and the area count for the quantitating internal standard is < 50 % of the area count for the previous continuing calibration, which greatly increases the potential for false negative results.

2 Very low or abrupt drop-off of quantitating internal standard, which indicates an increased potential for false negative results and possibly other problems with sample quantitation.

3 SMC (surrogate) % recovery > upper limit, which indicates a potential high bias in the results and a potential for false positive results.

3a SMC % recovery < lower limit but > 10%, which indicates a potential low bias in the results.

3b SMC recovery < 10%, which indicates an increased potential for a low bias in the results.

3c Indicates that the quantitation limit is approximated for non-detects because of SMC recovery < lower limit but > 10%, which also indicates an increased potential for false negative results.

3d SMC % recovery < 10% and result is a non-detect, which indicates a greatly increased potential for false negative results.

4 Sample result > EQL and < 5X (10X for acetone, methylene chloride, and 2-butanone) the concentration of the related analyte in the blank, which indicates the reported detection is considered to be indistinguishable from blank contamination.

5 Sample result < EQL and < 5X (10X as above) the concentration of the analyte in the blank, which indicates the detected result was indistinguishable from blank contamination and the detected result was changed to non-detected at the EQL.

5a Sample result > EQL and > 5X (10X as above) the concentration of the analyte in the blank, which indicates the reported result is not likely to be related to the contamination in the associated blank.

6 Response factor for the analytes is <0.05, indicating a sensitivity problem that could prohibit detection if present at low concentrations.

7 % RSD or % D exceeds the specification which may affect quantitation, which indicates potential quantitation problems in the analyses.

8 Instrument Performance Check has ion ratios our of specification, which may affect compound identification.

9. Holding time is exceeded. An evaluation of the data of interest with respect to holding time exceedance impact (technically) is recommended. Factors to consider include sample preservation, sample storage practices, use of the data, levels of contamination found in the sample, and the physical, chemical, and biological stability of the target analytes in the sample matrix.

10. The result is higher than the high point of the calibration (or outside the linear range). This usually results in a negative bias in the reported concentratiion.

CCS AND VALIDATION

Explanation of qualifiers (Q):

U The analyte was analyzed for but not detected above the reported EQL

J The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample
J+ Likely has a high bias
J- Likely has a low bias

UJ The analyte was analyzed for but not detected. The associated value is an estimate

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. Presence or absence cannot be verified. Note: Any results qualified as "R" should be looked at for relevance for data use. Thus, "R" implies "PM" also, and must not be used alone

P Use professional judgement based on data use . It usually has an "M"with it, indicating that a manual check should be made if the data that is qualified with the "P" is important to the data user.

In addition, PM also means that a decision must be made by the project manager/delegee regarding the need for further review of the data. This review should include some consideration of potential impact that could result from using the P qualified data. (For example, in the case of holding time excedance, the project manager/delegee can decide to use the data with no qualification when analyltes of interest are known to not be adversely affected by holding time exceedances. Another example is the case where soil sample duplicate analyses for metals exceed the precision criteria. Since this is likley because of sample non-homogeneity rather than lab error, the manager/delegee must decide how to use the data.)

PM Manual review of raw data is recommended to determine if the defect impacts data use, as in "R" above.

REASON CODES FOR VALIDATION QUALIFIERS

ORGANOCHLORINE PESTICIDES/AROCLORS (P)

3 Surrogate % recovery > upper limit, which indicates a potential high bias in the results and a potential for false positive results.

3a Surrogate % recovery is > 10% but < the lower limit, which indicates a potential low bias in the results.

3b Surrogate % recovery < 10%, which indicates an increased potential low bias in the results..

3c Result is non-detect and the surrogate % recovery > 10 % but < lower limit, which indicates a potential for false negative results.

3d Result is a non-detect and the surrogate recovery < 10%, which indicates a greatly increased potential for false negative results.

4 Sample result > EQL and < 5X the concentration of the related analyte in the blank, which indicates the reported detection is considered to be indistinguishable from blank contamination.

5 Sample result < EQL and < 5X (10X as above) the concentration of the analyte in the blank, which indicates the detected result was indistinguishable from blank contamination and the detected result was changed to non-detected at the EQL.

5a Sample result > EQL and > 5X (10X as above) the concentration of the analyte in the blank, which indicates the reported result is not likely to be related to the contamination in the associated blank.

6 % RSD or % D exceeds the specification - apply to a positive result, which indicates potential quantitation problems in the analyses and the potential for false positive results.

7 % RSD or %D exceeds the specification - apply to a non-detect, which indicates potential quantitation problems in the analyses and the potential false negative results.

8. Analyte concentration exceeds linear range and sample not diluted to within that range. This usually results in a negative bias in the reported concentratiion.

9. Holding time is exceeded. An evaluation of the data of interest with respect to holding time exceedance impact (technically) is recommended. Factors to consider include sample preservation, sample storage practices, use of the data, levels of contamination found in the sample, and the physical, chemical, and biological stability of the target analytes in the sample matrix.

10. Breakdown criteria have been exceeded, indicating poor instrument performance which can result in a low bias in the reported results and potential false negative results for labile compounds and potential false positive results for breakdown procucts.

11. Surrogate retention time has shifted by > 0.05 minutes, possibly affecting analyte identification and causing false positives or negatives.

ORGANOCHLORINE PESTICIDES/AROCLORS

Initial calibration: Present? X yes no **Daily calibration verification** Present? X yes no	 NA NA	Obtain from lab. Q=A Obtain from lab. Q=A	
Surrogates: Present? X yes no % recovery Tetrachloro-m-xylene 50-160 Decachlorbiphenyl 50-160	OK	Obtain from lab. Q=A If either surrogate's % recovery is more than upper limit, detected target compounds are are qualified with J+. If either surrogate's % recovery is ≥ 10% but ≤ lower limit, qualify detected compounds with J- and non-detected target analytes as UJ. If either surrogate's % recovery <10%, qualify detected compounds as J- and non-detects as R, PM. Enter % recovery in FIMAD table	 P3 P3a P3c P3b P3d
Retention Time Windows Present? X yes no Surrogates' retention time should not shift by ± 0.05 minutes.	OK	Obtain from lab. Q=A If either of the surrogate's RT shifts >± 0.05 minutes, qualify the results as PM. (An examination of chromatographic peaks will be required to determine if target analytes are present).	

HDR
9/21/99

Method blanks Present? X yes no Separate for each method, matrix, and/or analytical batch Target analytes < EQL	OK	Obtain from lab. Q=A If target compound found in blank but not in sample, no qualifier. Sample result > EQL and < 5 X multiple of blank, elevate EQL to sample result and qualify as U. Sample result < EQL and < 5X multiple of blank, elevate sample results to EQL and qualify as U. Sample result > 5X multiple, OK	 P4 P5
Breakdown criteria Present? yes no ≤ 20% for either 4,4'-DDT or endrin or 30% for combined breakdown.	NA	Obtain from lab. Q=A Q=P	
Holding time Extraction within 14 days of sample collection for soil and 7 days for water Analyses within 40 days of extraction	OK	Compare date of extraction with sampling date on Analytical Request and date of analysis with date of extraction. Q=PM

KEMRON ENVIRONMENTAL SERVICES
REPORT NARRATIVE

Lab ID# 7797L0014-8M

CLIENT: Los Alamos National Laboratory

LANL SDG/RN: 5824R

Sample Management:

Eight soil samples were received at Kemron Environmental Services on 7/21/99. The sample IDs were changed as per the amended chain of custody.

Client ID: RE03-99-2000
RE03-99-2001
RE03-99-2002
RE03-99-2003
RE03-99-2004
RE03-99-2005
RE03-99-2006
RE03-99-2007

Quality Control:

VOLATILE ORGANICS - 8260:

Target analytes and tentatively identified compounds detected int he method blank and samples were "B" qualified. The LCS recovery result for carbon disulfide was below the lower control limit. Multiple MS/MSD and RPD results were outside advisory limits.

GASOLINE RANGE ORGANICS - 8015:

Sample matrix interference on surrogate standards was confirmed by reanalysis.

PCB's - 8082:

Sample fractions 01 and 02 were analyzed at dilutions due to the presence of non-target analytes.

DIESEL RANGE ORGANICS - 8015:

Sample fraction 02 yielded % recoveries for both surrogates that were outside acceptable limits. This sample will be re-extracted and re-analyzed. Several samples in this case yielded % recoveries for octacosane that were outside acceptable limits. This can be attributed to sample matrix effects.

Shipment Conditions:

The samples were received intact. Solid blue ice was present.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and in completeness, except as detailed in this QC Report.

Order #99-07-381
August 4, 1999 14:53

KEMRON ENVIRONMENTAL SERVICES
REPORT NARRATIVE

Lab ID# 7797L0014-8M

CLIENT: Los Alamos National Laboratory

LANL SDG/RN: 5824R

Sample Management:

Eight soil samples were received at Kemron Environmental Services on 7/21/99. The sample IDs were changed as per the amended chain of custody.

Client ID: RE03-99-2000
RE03-99-2001
RE03-99-2002
RE03-99-2003
RE03-99-2004
RE03-99-2005
RE03-99-2006
RE03-99-2007

Quality Control:

VOLATILE ORGANICS - 8260:

Target analytes and tentatively identified compounds detected int he method blank and samples were "B" qualified. The LCS recovery result for carbon disulfide was below the lower control limit. Multiple MS/MSD and RPD results were outside advisory limits.

GASOLINE RANGE ORGANICS - 8015:

Sample matrix interference on surrogate standards was confirmed by reanalysis.

PCB's - 8082:

Sample fractions 01 and 02 were analyzed at dilutions due to the presence of non-target analytes.

DIESEL RANGE ORGANICS - 8015:

Sample fraction 02 yielded % recoveries for both surrogates that were outside acceptable limits. This sample will be re-extracted and re-analyzed. Several samples in this case yielded % recoveries for octacosane that were outside acceptable limits. This can be attributed to sample matrix effects.

Shipment Conditions:

The samples were received intact. Solid blue ice was present.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and in completeness, except as detailed in this QC Report.

KEMRON Environmental Services, Inc.
LIST OF VALID QUALIFIERS (qual)
December 10, 1998

Qualifier	Description
A	See the report narrative
NA	Not applicable
+	Correlation coefficient for the MSA is less than 0.995
<	Less than
>	Greater than
B	Present in the method blank
C	Confirmed by GC/MS
*	Surrogate or spike compound out of range
CG	Confluent growth
D	The analyte was quantified at a secondary dilution factor
DL	Surrogate or spike was diluted out
E	Estimated concentration due to sample matrix interference
F	Present below nominal reporting limit (AFCEE only)
FL	Free liquid
I	Semiquantitative result, out of instrument calibration range
J	Present below nominal reporting limit
L	Sample reporting limits elevated due to matrix interference
M	Duplicate injection precision not met

Qualifier	Description
N	Tentatively Identified Compound (TIC)
ND	Not detected at or above the reporting limit (RL)
NF	Not found
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentration > 25% difference between the two GC columns
QNS	Quantity not sufficient to perform analysis
R	Analyte exceeds regulatory limit
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
TNTC	Too numerous to count
U	Analyzed for but not detected
W	Post-digestion spike for furnace AA out of control limits
Z	Can not be resolved from isomer. See below.

Special Notes for Organic Analytes

1. Acrolein and acrylonitrile by method 624 are semiquantitative screens only.
2. 1,2-Diphenylhydrazine is unstable and is reported as azobenzene.
3. N-nitrosodiphenylamine cannot be separated from diphenylamine.
4. 3-Methyphenol and 4-Methyphenol are unresolvable compounds.
5. m-Xylene and p-Xylene are unresolvable compounds.
6. The reporting limits for Appendix II/IX compounds by method 8270 are based on EPA estimated PQLs referenced in 40 CFR Part 264, Appendix IX. They are not always achievable for every compound and are matrix dependent.

Sample Data

Target Compound List Results - See Section 1.0 (c) (Laboratory Report)

Tentatively Identified Compounds (TICs) - See Section 1.0 (c) (if requested)

- Reconstructed total ion chromatogram (RIC) and quantitation report for each sample
- Raw spectra and background subtracted mass spectra of target compounds identified
- Mass spectra of all reported TICs with three best library matches (if requested)

Rad Screening Data Release Form

The Following samples were received at the Field Support Facility (FSF) without screening data (list sample number):

These samples will not be shipped until radiological screening data documentation arrives at the FSF. I understand that it is my responsibility to ensure this information arrives at the FSF in a timely manner. If holding times are missed because screening data does not arrive, I will pick up the samples.

The following samples do not require rad screening data for the reasons stated (list sample numbers): Former samples collected from same locations previously screened.

Message: Hi Joy

Here are the Diesel results (TPH) For 6108R. As we discussed the samples have only small (less than Reporting Limits) amounts of Diesel, and even less gasoline.

Thanks,
Stan

Total Extractable Hydrocarbons (Diesel) Case Narrative

Los Alamos National Laboratory SMO

6108R

Order Number - 9910021

1. This report consists of 3 soil samples received by Paragon on 10/05/99.

2. The soil samples were extracted by adding a methanol/water solution to the soil followed by hexane. This mixture is shaken and the hexane portion of the two-phase solution is removed for analysis.

3. The extracts were then analyzed using GC with a DB-5.625 capillary column and a flame ionization detector (FID) according to protocols generally based on SW-846 Method 8000 and Method 8015. The procedures are based on this general method because SW-846 does not have a specific method for TEPH or diesel range organics. The only true modification from this method is that TEPH(diesel) is a multicomponent mixture and is quantitated by summing the entire range, rather than individual peaks. All positive results were quantitated using the responses from the initial calibration curve using the external standard technique. Also, a confirmation column is not used, because the analyte is a multicomponent mixture and the specific carbon range of the peaks detected are specified on the individual sample reporting forms.

4. All initial and continuing calibration criteria were within acceptance criteria.

5. The method blank associated with this project was below the reporting limits for diesel range organics.

6. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria.

7. Matrix spikes and matrix spike duplicates were performed on an in house sample not provided by the client. The data have not been provided in this package.

8. All samples were extracted and analyzed within the established holding times.

9. All surrogate recoveries were within acceptance criteria.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics, Inc. certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

RE: Paragon Workorder: 99-10-021
Client Project Name: None Submitted
Client Project Number: 6108R

Dear Ms. Valdez:

Three soil samples were received from LANL on October 5, 1999. The samples were scheduled for Total Extractable Hydrocarbons (Diesel) analysis. The results for this analysis are contained in the enclosed report, pages 1-78.

Please note that an EDD was sent out on October 18, 1999.

Please note that the GRO (gasoline) analysis was canceled, due to instrument failure which caused the samples to go out of hold time, this was discussed and approved by you, per our conversation on October 15, 1999.

Thank you for your confidence in Paragon Analytics, Inc. Should you have any questions, please call.

Sincerely,

Paragon Analytics, Inc.

Los Alamos
Environmental Restoration

CCS AND VALIDATION

Explanation of qualifiers (Q):

U The analyte was analyzed for but not detected above the reported EQL

J The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample
J+ Likely has a high bias
J- Likely has a low bias

UJ The analyte was analyzed for but not detected. The associated value is an estimate

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. Presence or absence cannot be verified. Note: Any results qualified as "R" should be looked at for relevance for data use. Thus, "R" implies "PM" also, and must not be used alone

P Use professional judgement based on data use . It usually has an "M"with it, indicating that a manual check should be made if the data that is qualified with the "P" is important to the data user.

In addition, PM also means that a decision must be made by the project manager/delegee regarding the need for further review of the data. This review should include some consideration of potential impact that could result from using the P qualified data. (For example, in the case of holding time excedance, the project manager/delegee can decide to use the data with no qualification when analyltes of interest are known to not be adversely affected by holding time exceedances. Another example is the case where soil sample duplicate analyses for metals exceed the precision criteria. Since this is likley because of sample non-homogeneity rather than lab error, the manager/delegee must decide how to use the data.)

PM Manual review of raw data is recommended to determine if the defect impacts data use, as in "R" above.

REASON CODES FOR VALIDATION QUALIFIERS

ORGANOCHLORINE PESTICIDES/AROCLORS (P)

3 Surrogate % recovery > upper limit, which indicates a potential high bias in the results and a potential for false positive results.

3a Surrogate % recovery is > 10% but < the lower limit, which indicates a potential low bias in the results.

3b Surrogate % recovery < 10%, which indicates an increased potential low bias in the results..

3c Result is non-detect and the surrogate % recovery > 10 % but < lower limit, which indicates a potential for false negative results.

3d Result is a non-detect and the surrogate recovery < 10%, which indicates a greatly increased potential for false negative results.

4 Sample result > EQL and < 5X the concentration of the related analyte in the blank, which indicates the reported detection is considered to be indistinguishable from blank contamination.

5 Sample result < EQL and < 5X (10X as above) the concentration of the analyte in the blank, which indicates the detected result was indistinguishable from blank contamination and the detected result was changed to non-detected at the EQL.

5a Sample result > EQL and > 5X (10X as above) the concentration of the analyte in the blank, which indicates the reported result is not likely to be related to the contamination in the associated blank.

6 % RSD or % D exceeds the specification - apply to a positive result, which indicates potential quantitation problems in the analyses and the potential for false positive results.

7 % RSD or %D exceeds the specification - apply to a non-detect, which indicates potential quantitation problems in the analyses and the potential false negative results.

8. Analyte concentration exceeds linear range and sample not diluted to within that range. This usually results in a negative bias in the reported concentratiion.

9. Holding time is exceeded. An evaluation of the data of interest with respect to holding time exceedance impact (technically) is recommended. Factors to consider include sample preservation, sample storage practices, use of the data, levels of contamination found in the sample, and the physical, chemical, and biological stability of the target analytes in the sample matrix.

10. Breakdown criteria have been exceeded, indicating poor instrument performance which can result in a low bias in the reported results and potential false negative results for labile compounds and potential false positive results for breakdown procucts.

11. Surrogate retention time has shifted by > 0.05 minutes, possibly affecting analyte identification and causing false positives or negatives.

Dear Ms. Valdez:

Three soil samples were received from LANL on October 5, 1999. The samples were scheduled for Total Extractable Hydrocarbons (Diesel) analysis. The results for this analysis are contained in the enclosed report pages 1-78.

Please note that an EDD was sent out on October 18, 1999.

Please note that the GRO (gasoline) analysis was canceled, due to instrument failure which caused the samples to go out of hold time, this was discussed and approved by you, per our conversation on October 15, 1999.

Thank you for your confidence in Paragon Analytics, Inc. Should you have any questions, please call.

Sincerely,

Paragon Analytics, Inc.

Total Extractable Hydrocarbons (Diesel) Case Narrative

Los Alamos National Laboratory SMO

6108R

Order Number - 9910021

1. This report consists of 3 soil samples received by Paragon on 10/05/99.

2. The soil samples were extracted by adding a methanol/water solution to the soil followed by hexane. This mixture is shaken and the hexane portion of the two-phase solution is removed for analysis.

3. The extracts were then analyzed using GC with a DB-5.625 capillary column and a flame ionization detector (FID) according to protocols generally based on SW-846 Method 8000 and Method 8015. The procedures are based on this general method because SW-846 does not have a specific method for TEPH or diesel range organics. The only true modification from this method is that TEPH(diesel) is a multicomponent mixture and is quantitated by summing the entire range, rather than individual peaks. All positive results were quantitated using the responses from the initial calibration curve using the external standard technique. Also, a confirmation column is not used, because the analyte is a multicomponent mixture and the specific carbon range of the peaks detected are specified on the individual sample reporting forms.

4. All initial and continuing calibration criteria were within acceptance criteria.

5. The method blank associated with this project was below the reporting limits for diesel range organics.

6. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria.

7. Matrix spikes and matrix spike duplicates were performed on an in house sample not provided by the client. The data have not been provided in this package.

8. All samples were extracted and analyzed within the established holding times.

9. All surrogate recoveries were within acceptance criteria.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics, Inc. certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Paragon Analytics, Inc.

Total Extractable Hydrocarbons (Diesel) Case Narrative

Los Alamos National Laboratory SMO

6108R

Order Number - 9910021

1. This report consists of 3 soil samples received by Paragon on 10/05/99.

2. The soil samples were extracted by adding a methanol/water solution to the soil followed by hexane. This mixture is shaken and the hexane portion of the two-phase solution is removed for analysis.

3. The extracts were then analyzed using GC with a DB-5.625 capillary column and a flame ionization detector (FID) according to protocols generally based on SW-846 Method 8000 and Method 8015. The procedures are based on this general method because SW-846 does not have a specific method for TEPH or diesel range organics. The only true modification from this method is that TEPH(diesel) is a multicomponent mixture and is quantitated by summing the entire range, rather than individual peaks. All positive results were quantitated using the responses from the initial calibration curve using the external standard technique. Also, a confirmation column is not used, because the analyte is a multicomponent mixture and the specific carbon range of the peaks detected are specified on the individual sample reporting forms.

4. All initial and continuing calibration criteria were within acceptance criteria.

5. The method blank associated with this project was below the reporting limits for diesel range organics.

6. All laboratory control spike and laboratory control spike duplicate recoveries and RPDs were within the acceptance criteria.

7. Matrix spikes and matrix spike duplicates were performed on an in house sample not provided by the client. The data have not been provided in this package.

8. All samples were extracted and analyzed within the established holding times.

9. All surrogate recoveries were within acceptance criteria.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics, Inc. certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

CCS AND VALIDATION

Explanation of qualifiers (Q):

U The analyte was analyzed for but not detected above the reported EQL

J The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample
J+ Likely has a high bias
J- Likely has a low bias

UJ The analyte was analyzed for but not detected. The associated value is an estimate

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. Presence or absence cannot be verified. Note: Any results qualified as "R" should be looked at for relevance for data use. Thus, "R" implies "PM" also, and must not be used alone

P Use professional judgement based on data use . It usually has an "M"with it, indicating that a manual check should be made if the data that is qualified with the "P" is important to the data user.

In addition, PM also means that a decision must be made by the project manager/delegee regarding the need for further review of the data. This review should include some consideration of potential impact that could result from using the P qualified data. (For example, in the case of holding time excedance, the project manager/delegee can decide to use the data with no qualification when analyltes of interest are known to not be adversely affected by holding time exceedances. Another example is the case where soil sample duplicate analyses for metals exceed the precision criteria. Since this is likley because of sample non-homogeneity rather than lab error, the manager/delegee must decide how to use the data.)

PM Manual review of raw data is recommended to determine if the defect impacts data use, as in "R" above.

REASON CODES FOR VALIDATION QUALIFIERS

INORGANICS (I)

3 Spike recovery > upper limit (125%) and the results > the EDL.

3a Spike recovery < lower limit (75%) and the results are > the EDL.

3d Spike recovery < 30 % and results < EDL.

3e Spike recovery 30-74% and sample results < EDL.

4 Using the worse case blank, the sample results > the EDL but < 5X the concentration of the related analyte in the blank.

6 Recovery of analyte in the LCS > upper limit.

6a Recovery of analyte in the LCS < lower limit.

7 ICS recovery > 120% and results > EDL.

7a ICS recovery 50-79% .

7b ICS recovery < 50% and result < EDL.

8a For ICV and CCV, recovery is lower than specification

8b For ICV and CCV, recovery is higher than specification

8c For ICV and CCV, results are positive, but < MDL and recovery is lower than the specification.

8d For ICV and CCV, recovery is extremely low and detection may be impaired.

8e For ICV and CCV, recovery is abnormally high - apply to results > MDL.

9 Holding time for Hg has been exceeded. Positive results may be biased low and non-detects may potential be false negatives.

INORGANICS

Calibration Present? Ξ yes no **Initial calibration verification** Present? Ξ yes no **Continuing calibration verification** Present? Ξ yes no	OK	Obtain from lab. Q=A Obtain form lab. Q=A	
Blanks (Applies to each) Present? Ξ yes no **Initial & continuing calibration blanks** Analyze at each wavelength Beginning and end of each run ICB and CCB analyzed at a frequency of 10% or 2 hours If blank results > EDL reanalyze previous 10 samples **Preparation blank** One per batch ≤ EDL, or if concentration of analyte < 10X EDL, repeat all samples in batch	U See comment	Obtain from lab. Q=A Use "worse" case blank. Sample results > EDL but < 5 X amount found in the blank should be qualified as U. *The following analytes were detected in the blank: ManSe.* *The following analytes were detected in the ICB /or CCB: Al, Sb, Mg, and V.*	I4

NDR
9/20/99

ICP Interference check sample Present? Ξ yes no Solution contains Ag, Ba, Be, Cd, Co, Cr, Cu, Mn, Ni, Pb, V, & Zn Analyze at beginning of each run Each wavelength used for samples ICS results must be ± 20%of true value	OK	Obtain from lab. Q=A If the ICS recovery is >120% and the results are >EDL, qualify data as J+ If recovery is 50-79%, qualify data as J- If ICS recovery is < 50% and results are < EDL, qualify results as R, PM	 I7 I7a I7b
Spike sample analysis Present? Ξ yes no One per run, per matrix, concentration, SDG % recovery: 75-125% (unless conc. > 4X spike conc.) Analyte %Recovery *Sb* *19.2* Ba 165.7 *Mn* *292.8* Se 34.1	P,UJ	Obtain from lab. Q=A If spike recovery > 125% and results < EDL, OK If spike recovery < 75% and results are >EDL, qualify results as J- if same matrix, P if not. If spike recovery > 125% and results are >EDL, qualify data as J+ if same matrix, P if not. If spike recovery 30-74% and sample results < EDL, qualify as UJ if same matrix, P if not. If spike recovery results < 30% and results < EDL, qualify as R, PM.	 I3a I3 I3e I3d

NDR
9/20/99

Duplicate **Present? Ξ yes no** **One per batch of sample of like matrix for each SDG** **RPD : ≤ 20% (advisory)** **If either the sample or duplicate value is less than 5 X EDL, there is a control limit of ± EDL**	**(P) See comment**	**Obtain from lab. Q=A** **Q=P because of nature of LANL samples.** ***The following analyte exceeded %rpd limit: Al, As, Ba, Be, Cr, Cu, Fe, Pb, Mg, K, Ag, V and Zn.***	
Laboratory Control Sample (LCS) **Aqueous LCS per batch/SDG** **% recovery : 80-120% (except Ag & Sb)** *The LCS was a solid sample. Recoveries met aqueous criteria.*	**OK** See comment	**If criterion not met, qualify each analyte associated with the LCS in the same batch as J-** **for < 80% and J+ for > 120%**	**I6a** **I6**
Holding time **Analyze water samples for Hg within 28 days of sample collection** **Analyze water samples for CN within 14 days of sample collection**	**NA**	**Compare analysis date with date of sample collection on the Analysis Request.** **Q=PM**

KEMRON ENVIRONMENTAL SERVICES
REPORT NARRATIVE

Lab ID# 7797L0014-8M

CLIENT: Los Alamos National Laboratory

LANL SDG/RN: 5825R

Sample Management:

Eight soil samples were received at Kemron Environmental Services on July 21, 1999.

Client ID:

RE03-99-2000
-2001
-2002
-2003
-2004
-2005
-2006
-2007

Quality Control:

METALS - 6010/7000:

A post digestion spike was analyzed with the following recoveries:

Barium	95.3% recovery
Manganese	91.1% recovery

The antimony and selenium were analyzed by the method of standard additions.

Some sample non-homogeneity was indicated by the duplicate analysis.

Case Narrative: (Page 2)

Shipment Conditions:

The samples were received intact. Solid blue ice was present.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and in completeness, except as detailed in this QC Report.

REQUEST NUMBER: 5825R

ANALYSIS TYPE: INORG

Los Alamos
NATIONAL LABORATORY

ATTN: Maren Beery
KEMRON
109 STARLITE PARK
MARIETTA, OH 45750

Please analyze the enclosed samples according to the schedule indicated:

SHIP DATE: 7/19/99
REPORT DUE: 8/21/99
TURN AROUND REQ'D: 30 days

These samples are on:

LANL Request Number: 5825R
Per Agreement Number: 7797L0014-9S
Project Cost Code: CG9K00000000

RAD SCREENING: Not Required

COMMENTS: 03 - 6666 , JL;

LANL ER SMO CONTACT: Joylene Valdez MS H865 5056659968
