REPORT NARRATIVE

Lab ID# 7797L0014-8M

CLIENT: Los Alamos National Laboratory

LANL SDG/RN: 5825R

Sample Management:

Eight soil samples were received at Kemron Environmental Services on July 21, 1999.

Client ID:

Quality Control:

METALS - 6010/7000:

A post digestion spike was analyzed with the following recoveries:

Barium	95.3% recovery
Manganese	91.1% recovery

The antimony and selenium were analyzed by the method of standard additions.

Some sample non-homogeneity was indicated by the duplicate analysis.

Case Narrative: (Page 2)

Shipment Conditions:

The samples were received intact. Solid blue ice was present.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and in completeness, except as detailed in this QC Report.

LIST OF VALID QUALIFIERS (qual)
December 10, 1998

Qualifier	Description
A	See the report narrative
NA	Not applicable
+	Correlation coefficient for the MSA is less than 0.995
<	Less than
>	Greater than
B	Present in the method blank
C	Confirmed by GC/MS
*	Surrogate or spike compound out of range
CG	Confluent growth
D	The analyte was quantified at a secondary dilution factor
DL	Surrogate or spike was diluted out
E	Estimated concentration due to sample matrix interference
F	Present below nominal reporting limit (AFCEE only)
FL	Free liquid
I	Semiquantitative result, out of instrument calibration range
J	Present below nominal reporting limit
L	Sample reporting limits elevated due to matrix interference
M	Duplicate injection precision not met

Qualifier	Description
N	Tentatively Identified Compound (TIC)
ND	Not detected at or above the reporting limit (RL)
NF	Not found
NFL	No free liquid
NI	Non-ignitable
NR	Analyte is not required to be analyzed
NS	Not spiked
P	Concentration > 25% difference between the two GC columns
QNS	Quantity not sufficient to perform analysis
R	Analyte exceeds regulatory limit
RA	Reanalysis confirms reported results
RE	Reanalysis confirms sample matrix interference
S	Analyzed by method of standard addition
SMI	Sample matrix interference on surrogate
SP	Reported results are for spike compounds only
TNTC	Too numerous to count
U	Analyzed for but not detected
W	Post-digestion spike for furnace AA out of control limits
Z	Can not be resolved from isomer. See below.

Special Notes for Organic Analytes

1. Acrolein and acrylonitrile by method 624 are semiquantitative screens only.
2. 1,2-Diphenylhydrazine is unstable and is reported as azobenzene.
3. N-nitrosodiphenylamine cannot be separated from diphenylamine.
4. 3-Methyphenol and 4-Methyphenol are unresolvable compounds.
5. m-Xylene and p-Xylene are unresolvable compounds.
6. The reporting limits for Appendix II/IX compounds by method 8270 are based on EPA estimated PQLs referenced in 40 CFR Part 264, Appendix IX. They are not always achievable for every compound and are matrix dependent.

CONDITIONS FOR Sb :
Alternative Wavelengths (nm) : 231.2
Spectral Bandwidths (nm) : 0.5
Maximum Ash Temperature : 800xC
Recommended Atomize Temperature : 2000xC
Recommended Chemical Modifiers :
Palladium Chloride (500-2000fg/mL) plus reducing agent such as ascorbic acid, or
Nickel Nitrate (50-1000fg/mL).
Response with Argon : 10fL of 50ng/mL gives about 0.2 Abs.

The modifiers permit the use of a higher ashing temperature and enhance the analyte signal.
Use of a multi-element lamp may require a different slit width, lamp current and wavelength to isolate the analytical line.

CONDITIONS FOR Tl :
Alternative Wavelengths (nm) : 258.0
Spectral Bandwidths (nm) : 1.0
Maximum Ash Temperature : 400xC
Recommended Atomize Temperature : 2200xC
Recommended Chemical Modifiers :
1% sulphuric acid solution, or
Palladium CHloride solution (500-2000fg/mL) plus reducing agent such as ascorbic acid.
Response with Argon : 10fL of 75ng/mL gives about 0.2 Abs.

The 1% sulphuric acid overcomes severe interferences from hydrochloric acid, perchloric acid and sodium chloride. The palladium permits higher ashing temperatures.
Use of a multi-element lamp may require a different slit width, lamp current and wavelength to isolate the analytical line.

CONDITIONS FOR Tl :
Alternative Wavelengths (nm) : 258.0
Spectral Bandwidths (nm) : 1.0
Maximum Ash Temperature : 400xC
Recommended Atomize Temperature : 2200xC
Recommended Chemical Modifiers :
1% sulphuric acid solution, or
Palladium CHloride solution (500-2000fg/mL) plus reducing agent such as ascorbic acid.
Response with Argon : 10fL of 75ng/mL gives about 0.2 Abs.

The 1% sulphuric acid overcomes severe interferences from hydrochloric acid, perchloric acid and sodium chloride. The palladium permits higher ashing temperatures.
Use of a multi-element lamp may require a different slit width, lamp current and wavelength to isolate the analytical line.

RADIOLOGICAL SCREENING DATA RELEASE FORM

The following samples (list samples by number) were received at the Field Support Facility (FSF) without radiological screening data. These samples will not be shipped until radiological screening documentation arrives at the FSF. I understand that it is my responsibility to ensure that this information arrives at the FSF in a timely manner. **If holding times are missed because screening data do not arrive, I will pick up the samples when called to do so.**

Dear Ms. Valdez:

Enclosed please find the data report for 12 soil samples received 25 July 2001. These were analyzed for PCBs and TPH DRO on a 30 day turnaround. The EDD will follow shortly. – enclosed JL

Please do not hesitate to contact me at (610) 280-3029 with any question you may have regarding either the hard copy or electronic report.

Very truly yours,

Organochlorine Pesticide and Polychlorinated Biphenyl Data Validation Checklist

Part Ia. Instrument Calibrations

Criteria	Criterion true? (y, n, or n/a)	Action if "criterion true?" = no	Actual time lapse
Was the initial calibration completed?	1a. yes	1b. Return the data record package to the SMO.	1c. n/a
Was the continuing calibration check performed at the beginning of each 24-hr analysis period following the analysis of the instrument performance check and before the analysis of blanks and samples? **Attention:** A continuing calibration check is not required if all samples are analyzed within 24 hrs of initial calibration—record "n/a" in blocks 2a and 2c.	2a. yes	2b. Assign the qualifier and reason code "**A, P16**" to all results. In block 2c, record the actual time lapse.	2c. na

Part Ib. Instrument Calibrations (continued)

Criteria	Criterion true? (y, n, or n/a)	Action if "criterion true?" = no	List noncompliant analyte(s) and affected samples.
Is there a standard analysis for each multicomponent analyte detected within 72 hours of the sample analysis where the multicomponent analyte was detected?	3a. na	3b. Assign the qualifier and reason code "**J, P7a**" to the detected results.	3c. na

Part Ic. Analyte Breakdown Criteria

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = yes Identify noncompliant LCS analytes *and* assign qualifier & reason code...	List noncompliant analyte(s) and affected samples.	Percent breakdown
Are any required analyte percent breakdowns *not* reported?	1a. no	1b. **"A, P10b"** for any missing documentation. In block 1c, record • noncompliant analytes and • all affected samples.	1c. na	1d. n/a
Is 4,4'-DDT breakdown > 20% **AND** was 4,4'-DDT detected in the samples?	2a. no	2b. **"J-, P10"** to 4,4'-DDT results. In block 2c, record affected samples. In block 2d, record the percent breakdown of affected 4,4'-DDT. Assign qualifier & reason code **"J+, P10a"** to detected DDD and DDE results.	2c. na	2d. na
Is 4,4'-DDT breakdown > 20% **AND** **was 4,4'-DDT *not detected* in the samples** **AND** Was either DDD and/or DDE *detected* in the samples?	3a. no	3b. **"RPM, P10"** to 4,4'-DDT results. In block 3c, record affected samples. In block 3d, record the percent breakdown of affected 4,4'-DDT. Assign qualifier & reason code **"J+, P10a"** to detected DDD and DDE results.	3c. na	3d. na

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = yes Identify noncompliant LCS analytes *and* assign qualifier & reason code...	List noncompliant analyte(s) and affected samples.	Percent breakdown
Is Endrin breakdown > 20% **AND** was Endrin detected in the samples?	4a. no	4b. **"J-, P10"** to Endrin results. In block 4c, record affected samples. In block 4d, record the percent breakdown of affected Endrin. Assign qualifier & reason code **"J+, P10a"** to detected Endrin ketone and Endrin aldehyde results.	4c. na	4d. na
Is Endrin breakdown > 20% **AND** are 4,4'-DDT or Endrin *not detected* in the samples **AND** were either Endrin ketone and/or Endrin aldehyde *detected* in the samples?	5a. no	5b. **"RPM, P10"** to Endrin results. In block 5c, record affected samples. In block 5d, record the combined percent breakdown of affected 4,4'-DDT. Assign qualifier & reason code **"J+, P10a"** to detected Endrin ketone and Endrin aldehyde results.	5c. na	5d. na
Is the combined breakdown > 30% **AND** were either 4,4'-DDT or Endrin detected in the samples?	6a. no	6b. **"J-, P10"** to 4,4'-DDT and/or Endrin results. In block 6c, record affected samples. In block 6d, record the combined percent breakdown. Assign qualifier & reason code **"J+, P10a"** to detected DDD and DDE and/or Endrin ketone and Endrin aldehyde results.	6c. na	6d. na

Part IIa. Method and Instrument Blanks Validation Criteria

Criteria	Criterion true? (yes/no)	Action if "criterion true?" = no Assign qualifier & reason code...	List all affected sample matrices and/or analytical batches.
Was a method blank analyzed for each sample matrix and batch?	1a. yes	1b. "**A, P4a**" to any samples with results > EQL that have any missing documentation. In block 1c, record all sample matrices and/or analytical batches that *did not* include a method blank.	1c. na
Was an instrument blank analyzed every 12 hours?	2a. yes	2b. "**A, P4a**" to any samples with results > EQL that have any missing documentation. In block 2c, record all sample matrices and/or analytical batches that *were not* covered by an instrument blank.	2c. na

Part IIb. Method and Instrument Blanks Validation Criteria (continued)

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = yes Assign qualifier & reason code...	List detected blank analyte(s) and affected samples.	Analyte concentration (mg/kg)
Is the sample result > the EQL but < 5 times the blank concentration?	3a. no	3b. "**U, P4**" to sample results > the EQL. In block 3c, record blank (method or instrument), samples, and analyte(s) in question. In block 3d, record the analyte concentration(s).	3c. na	3d. na

Part III. Laboratory Control Sample Criteria

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = yes Assign qualifier & reason code...	List noncompliant analyte(s) and affected samples.	Percent recovery
Is any required analyte percent recovery *not* reported?	1a. no	1b. "**A, P12**" for any missing documentation. In block 1c, record • noncompliant analytes and • all affected samples.	1c. na	1d. n/a
Is any required analyte recovery < 10%?	2a. no	2b. "**RPM, P12a**" to all analyte results. In block 2c, record • noncompliant analytes and • all affected samples. In block 2d, record the percent recoveries of all affected analytes.	2c. na	2d. na
Is any required analyte recovery < 80% but > 10%?	3a. no	3b. "**J-, P12b**" to *detected* sample analytes and "**UJ-, P12c**" to all *nondetected* sample analytes. In block 3c, record • noncompliant analytes and • all affected samples. In block 3d, record the percent recoveries of all affected analytes.	3c. na	3d. na
Is any required analyte recovery > 120%?	4a. no	4b. "**J+, P12d**" to detected sample analytes. In block 4c, record • noncompliant analytes and • all affected samples. In block 4d, record the percent recoveries of all affected analytes.	4c. na	4d. na

Client: LANL REQ.#9407R
LVL#: 0107L389
Subcontract #: 7791L0014-AA

W.O.#: 02744-064-001-9999-00
Date Received: 07-25-2001

PCB

The set of samples consisted of six (6) soil samples collected on 07-23-2001.

The samples and their associated QC samples were extracted on 07-26-2001 and analyzed according to Lionville Laboratory OPs based on SW846, 3rd Edition procedures on 08-03,04-2001. The extraction procedure was based on method 3540 and the extracts were analyzed based on method 8082 for Aroclors only.

The following is a summary of the QC results accompanying the sample results and a description of any problems encountered during their analyses:

1. The cooler temperature has been recorded on the chain-of-custody.
2. All required holding times for extraction and analysis have been met.
3. The samples and their associated QC samples received a sulfuric acid cleanup.
4. The method blank was below the reporting limits for all target compounds.
5. All surrogate recoveries were within acceptance criteria.
6. The blank spike recovery was within acceptance criteria.
7. The matrix spike recoveries were within acceptance criteria.
8. All initial calibrations associated with this data set were within acceptance criteria.
9. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
10. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

DIESEL RANGE ORGANICS

The set of samples consisted of six (6) soil samples collected on 07-23-01.

The samples and their associated QC samples were prepared on 07-26-01 and analyzed according to Lionville Laboratory OPs based on EPA Method 8015B for Diesel and Oil Range Petroleum Hydrocarbons on 08-07,13,16.24-01.

1. The cooler temperature has been recorded on the chain-of-custody.

2. All required holding times for extraction and analysis have been met.

3. All obtainable surrogate recoveries were within acceptance criteria.

4. The blank spike recovery was within acceptance criteria.

5. All matrix spike recoveries were within acceptance criteria.

6. All initial calibrations associated with this data set were within acceptance criteria.

7. Several samples required instrument dilutions due to the high concentrations of target analytes and non-target analytes. Reporting limits have been adjusted to reflect the necessary dilutions.

8. All diesel continuing calibration standards analyzed prior to the sample extracts were within acceptance criteria.

9. I certify that this package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

DIESEL RANGE ORGANICS

The set of samples consisted of six (6) soil samples collected on 07-23-01.

The samples and their associated QC samples were prepared on 07-26-01 and analyzed according to Lionville Laboratory OPs based on EPA Method 8015B for Diesel and Oil Range Petroleum Hydrocarbons on 08-07,13,16.24-01.

1. The cooler temperature has been recorded on the chain-of-custody.

2. All required holding times for extraction and analysis have been met.

3. All obtainable surrogate recoveries were within acceptance criteria.

4. The blank spike recovery was within acceptance criteria.

5. All matrix spike recoveries were within acceptance criteria.

6. All initial calibrations associated with this data set were within acceptance criteria.

7. Several samples required instrument dilutions due to the high concentrations of target analytes and non-target analytes. Reporting limits have been adjusted to reflect the necessary dilutions.

8. All diesel continuing calibration standards analyzed prior to the sample extracts were within acceptance criteria.

9. I certify that this package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

DIESEL RANGE ORGANICS

The set of samples consisted of six (6) soil samples collected on 07-23-01.

The samples and their associated QC samples were prepared on 07-26-01 and analyzed according to Lionville Laboratory OPs based on EPA Method 8015B for Diesel and Oil Range Petroleum Hydrocarbons on 08-07,13,16.24-01.

1. The cooler temperature has been recorded on the chain-of-custody.
2. All required holding times for extraction and analysis have been met.
3. All obtainable surrogate recoveries were within acceptance criteria.
4. The blank spike recovery was within acceptance criteria.
5. All matrix spike recoveries were within acceptance criteria.
6. All initial calibrations associated with this data set were within acceptance criteria.
7. Several samples required instrument dilutions due to the high concentrations of target analytes and non-target analytes. Reporting limits have been adjusted to reflect the necessary dilutions.
8. All diesel continuing calibration standards analyzed prior to the sample extracts were within acceptance criteria.
9. I certify that this package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

GLOSSARY OF DIESEL RANGE ORGANICS DATA

DATA QUALIFIERS

U = Indicates that the compound was analyzed for but not detected. The minimum detection limit for the sample (not the method detection limit) is reported with the U (e.g. 10U).

J = Indicates an estimated value. This flag is used in cases where a target analyte is detected at a level less than the lower quantification level. If the limit of quantification is 10ug/L and a concentration of 3 ug/L is calculated, it is reported as 3J.

B = This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination.

E = Indicates a compound was detected beyond the calibration range and was subsequently analyzed at a dilution.

I = Interference.

ABBREVIATIONS

BS = Indicates blank spike reagent grade water spiked with the matrix spiking solution. Spike recoveries are reported.

BSD = Indicates a blank spike duplicate.

MS = Indicates a matrix spike.

MSD = Indicates a matrix spike duplicate.

NA = Not Applicable.

NS = Not spiked.

DF = Dilution factor.

NR = Not required.

SP = Indicates a spiked compound.

Multilevel Calibration Method Report

Calibration curve statistics are presented on the Multilevel Calibration Method reports. This report includes the type of calibration preformed, the file reference (i.e. 06209811.06) of the calibration standards used, the slope and intercept of the curve for each analyte, and the curve fit statistics. The column labeled as "CORR COEFF" presents the coefficient of determination (r^2) for each analyte. Our laboratory acceptance criteria are based on the correlation coefficient ® being at least 0.996. Therefore, the minimum acceptance value for "CORR COEFF" (r^2) on the Multilevel Calibration Method report is 0.992.

Client: LANL REQ.#9407R
LVL#: 0107L389
Subcontract #: 7791L0014-AA

W.O.#: 02744-064-001-9999-00
Date Received: 07-25-2001

PCB

The set of samples consisted of six (6) soil samples collected on 07-23-2001.

The samples and their associated QC samples were extracted on 07-26-2001 and analyzed according to Lionville Laboratory OPs based on SW846, 3rd Edition procedures on 08-03,04-2001. The extraction procedure was based on method 3540 and the extracts were analyzed based on method 8082 for Aroclors only.

The following is a summary of the QC results accompanying the sample results and a description of any problems encountered during their analyses:

1. The cooler temperature has been recorded on the chain-of-custody.
2. All required holding times for extraction and analysis have been met.
3. The samples and their associated QC samples received a sulfuric acid cleanup.
4. The method blank was below the reporting limits for all target compounds.
5. All surrogate recoveries were within acceptance criteria.
6. The blank spike recovery was within acceptance criteria.
7. The matrix spike recoveries were within acceptance criteria.
8. All initial calibrations associated with this data set were within acceptance criteria.
9. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
10. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

GLOSSARY OF PESTICIDE/PCB DATA

DATA QUALIFIERS

U = Indicates that the compound was analyzed for but not detected. The minimum detection limit for the sample (not the method detection limit) is reported with the U (e.g., 10U).

J = Indicates an estimated value. This flag is used in cases where a target analyte is detected at a level less than the lower quantification level. If the limit of quantification is 10 ug/L and a concentration of 3 ug/L is calculated, it is reported as 3J.

B = This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination.

E = Indicates that the compound was detected beyond the calibration range and was subsequently analyzed at a dilution.

I = Interference.

ABBREVIATIONS

BS = Indicates blank spike in which reagent grade water is spiked with the CLP matrix spiking solutions and carried through all the steps in the method. Spike recoveries are reported.

BSD = Indicates blank spike duplicate.

MS = Indicates matrix spike.

MSD = Indicates matrix spike duplicate.

DL = Indicates that recoveries were not obtained because the extract had to be diluted for analysis.

NA = Not Applicable.

DF = Dilution Factor.

NR = Not Required.

SP = Indicates Spiked Compound.

GLOSSARY OF PESTICIDE/PCB DATA

P = This flag is used for an PESTICIDE/PCB target analyte when there is greater than 25% difference for detected concentrations between the two GC columns (see Form X). The lower of the two values is reported on Form I and flagged with a "P".

D = This flag identifies all compounds identified in an analysis at a secondary dilution factor.

C = This flag applies to a compound that has been confirmed by GC/MS.

Calibration Standard Data

Addendum

Multilevel Calibration Method Report

Calibration curve statistics are presented on the Multilevel Calibration Method reports. This report includes the type of calibration preformed, the file reference (i.e. 06209811.06) of the calibration standards used, the slope and intercept of the curve for each analyte, and the curve fit statistics. The column labeled as "CORR COEFF" presents the coefficient of determination (r^2) for each analyte. Our laboratory acceptance criteria are based on the correlation coefficient ® being at least 0.996. Therefore, the minimum acceptance value for "CORR COEFF" (r^2) on the Multilevel Calibration Method report is 0.992.

RADIOLOGICAL SCREENING DATA RELEASE FORM

The following samples (list samples by number) were received at the Field Support Facility (FSF) without radiological screening data. These samples will not be shipped until radiological screening documentation arrives at the FSF. I understand that it is my responsibility to ensure that this information arrives at the FSF in a timely manner. **If holding times are missed because screening data do not arrive, I will pick up the samples when called to do so.**

Dear Ms. Valdez:

Enclosed please find the EDD for 6 soil samples received 25 July 2001. These were analyzed for metals on a 30 day turnaround. The EDD will follow shortly.

Please feel free to contact me at (610) 280-3029 with any question you may have regarding either the hard copy or electronic report.

Very truly yours,

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed upon date of resolution and contract laboratory point of contact):

ICP analyses:

1) The method blank had contamination below the reporting limit for Ba, Ca, Mn, and Na. The 5x rule was applied to the sample results for these analytes.

2) The matrix spike had recovery for Sb that was outside of the method limits.

3) The duplicate sample had poor reproducibility with RPDs above the method limit for Tl.

Hg: all QC were acceptable.

Inorganic Data Validation Checklist

Part I. Detection Status Verification

Criterion	Criterion true? (yes or no)	Action if "criterion true?" = yes Assign qualifier & reason code...
Are analytical-laboratory B-flagged results present?	1a. No - but there are analytes that should be B-flagged.	1b. **"J, I1"** to all affected analytes on the Form I.

Part II. Initial and Continuing Calibrations Verification

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = no Assign qualifier & reason code...	List affected analyte(s) and affected samples.
Is the initial calibration verification (ICV) present?	1a. Yes	1b. **"A, I15A"** for any missing documentation. In block 1c, record all sample matrices and/or analytical batches that did not include an ICV.	1c. n/a
Is the continuing calibration verification (CCV) present?	2a. Yes	2b. **"A, I15b"** for any missing documentation. In block 2c, record all sample matrices and/or analytical batches that did not include a CCV.	2c. n/a

Inorganic Data Validation Checklist

Part IIIa. Preparation Blank Validation Criteria

Criterion	Criterion true? (yes or no)	Action if "criterion true?" = no Assign qualifier & reason code...	List affected matricies or batches.
Was a preparation blank analyzed for each sample matrix and batch?	1a. Yes	1b. **"A, I4b"** for any missing documentation. In block 1c, record all sample matrices and/or analytical batches that did not include a preparation blank.	1c. n/a

Part IIIb. Preparation Blank Validation Criteria (continued)

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = yes Assign qualifier & reason code...	List detected blank analyte(s) and affected samples.	Analyte concentration (mg/kg)
Is a target analyte detected in the preparation blank **AND** is the same target analyte detected in the sample result < five times the amount detected in the preparation blank **AND** is the target analyte detected in the sample < the EDL?	2a. No	2b. **"U, I5"** to affected sample analyte(s).	2c. n/a	2d. n/a

Inorganic Data Validation Checklist

Part IIIb. Preparation Blank Validation Criteria (continued)

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = yes Assign qualifier & reason code...	List detected blank analyte(s) and affected samples.	Analyte concentration (mg/kg)
Is a target analyte detected in the preparation blank **AND** is the same target analyte detected in the sample result < five times the amount detected in the preparation blank **AND** is the target analyte detected in the sample ≥ the EDL?	3a. No	3b. **"U, I4a"** to affected sample analyte(s).	3c. n/a	3d. n/a

Part IVa. ICPES Interference Check Sample (ICS) Validation Criteria

Criteria	Criterion true? (yes/no)	Action if "criterion true?" = no Assign qualifier & reason code...	List all noncompliant ICS analytes.
Was an ICS analyzed for each sample matrix and/or analytical batch? ICS samples must contain the following analytes: Ag, Ba, Be, Cd. Co, Cr, Cu, Mn, Ni, Pb, V, and Zn. **Note:** Pb is required only if Pb was analyzed by ICPES.	1a. Yes	1b. **"A, I7d"** for any missing documentation. In block 1c, record • any ICPES ICS analytes not reported and • all affected samples.	1c. n/a

Part Va. Matrix-Spike Validation Criteria

Criterion	Criterion true? (yes/no)	Action if "criterion true?" = no Identify noncompliant matrix-spike percent recovery values *and* assign qualifier & reason code...	List ER Project RN & sample ID for matrix-spike sample
Is a matrix-spike sample present?	1a. Yes	1b. **"PM, I14b"** if the matrix-spike sample that was analyzed was on a sample not associated with this request number. In block 1c record • the request number and sample ID of spiked sample. **OR** **"A, I14a"** if the matrix-spike sample was missing because insufficient sample volume was received by the analytical laboratory for the duplicate analysis.	1c. n/a

Inorganic Data Validation Checklist

Part Vb. Matrix-Spike Validation Criteria (continued)

Criteria	Criterion true? (yes/no)	Action if "criterion true?" = yes Assign qualifier & reason code...	List all affected matrix-spike analytes and samples.	Percent recovery
Is the matrix spike percent recovery value > 150%?	2a. No	2b. "**J+, I3h**" to all *detected* sample analytes and "**UJ, I3g**" to all *nondetected* sample analytes.	2c. n/a	2d. n/a
Is the matrix spike percent recovery value 125%–150%?	3a. No	3b. "**J+, I3**" to all *detected* sample analytes and no qualifier for any *nondetected* sample analytes.	3c. n/a	3d. n/a
Is the matrix spike percent recovery value between 30% and 75%, inclusive?	4a. Yes	4b. "**J-, I3a**" to all *detected* sample analytes and "**UJ, I3e**" to all *nondetected* sample analytes.	4c. Sb	4d. Sb: 55.5%
Is the matrix spike percent recovery value < 30%?	5a. No	5b. "**J, I3f**" to all *detected* sample analytes and "**RPM, I3d**" to all *nondetected* sample analytes.	5c. n/a	5d. n/a

Dear Ms. Valdez:

Enclosed please find the EDD for 6 soil samples received 25 July 2001. These were analyzed for metals on a 30 day turnaround. The EDD will follow shortly.

Please do not hesitate to contact me at (610) 280-3029 with any question you may have regarding either the hard copy or electronic report.

Very truly yours,

Lionville Laboratory Incorporated

A. Preliminary Examination Phase

Date Cooler Opened 7-25-01 Sample Receipt Custodian Signature: [signature]

1. Did the cooler come with a shipping slip? (airbill, etc.) YES NO
If YES, enter carrier name & airbill # here: 4847 3249 9976
2. Were custody seals present on the outside of cooler? YES NO
3. Were custody seals unbroken & intact at the date & time of arrival? YES NO
4. Were samples screened for radioactivity? YES NO
5. Were custody papers sealed in a plastic bag and taped to the inside of the cooler lid? YES NO
6. Were COC papers filled out properly? (ink, signed, etc.) YES NO
7. Did the lab sample custodian sign the COC in the appropriate place? YES NO
8. Was the project identifiable from custody papers? If YES, enter at the top of this form. YES NO
9. If required, was enough ice used? YES NO
Type of ice: blue Cooler Temperature: 6.6°C

SW846 METALS

1. This narrative covers the analyses of 6 soil samples.

2. The samples were prepared and analyzed in accordance with SW-846 protocol and reported with a CLP deliverable.

3. ICVs, CCVs, and LCSs stock standards were purchased from Inorganic Ventures Laboratory and High Purity.

4. All analyses were performed within the required holding times.

5. The cooler temperature has been recorded on the Chain of Custody.

6. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within control limits.

7. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within method criteria.

8. All preparation/method blanks were below reporting limits. Refer to form 3.

9. All ICP Interference Check Standards were within control limits. Refer to form 4.

10. All laboratory control samples (LCS) were within the 80-120% control limits. Refer to form 7.

11. All serial dilution percent differences were within SW-846 control limits. Refer to form 9.

12. The matrix spike (MS) recoveries for 3 analytes were outside the 75-125% control limits. Refer to form 5A.

13. For analytes where the MS is out of control, a post-digestion MS (PDS) is performed. A PDS was prepared at meaningful concentration levels. Refer to form 5B.

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 220 pages.

208 Welsh Pool Road • Exton, PA 19341-1313 • (610) 280-3000 • Fax (610) 280-3041

14. The duplicate analyses for 2 analytes were outside the 20% Relative Percent Difference (RPD) control limits. Refer to form 6.

15. All sample IDs were changed to accommodate the EPA naming convention which allows a maximum of 6 characters on all CLP Forms. Refer to the comments section of form 1 for the original ID.

16. Recoveries on the Laboratory Summary Report and CLP forms will vary depending on the number of significant figures used in the recovery calculation.

17. I certify that this package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

SW846 METALS

1. This narrative covers the analyses of 6 soil samples.

2. The samples were prepared and analyzed in accordance with SW-846 protocol and reported with a CLP deliverable.

3. ICVs, CCVs, and LCSs stock standards were purchased from Inorganic Ventures Laboratory and High Purity.

4. All analyses were performed within the required holding times.

5. The cooler temperature has been recorded on the Chain of Custody.

6. All Initial and Continuing Calibration Verifications (ICV/CCVs) were within control limits.

7. All Initial and Continuing Calibration Blanks (ICB/CCBs) were within method criteria.

8. All preparation/method blanks were below reporting limits. Refer to form 3.

9. All ICP Interference Check Standards were within control limits. Refer to form 4.

10. All laboratory control samples (LCS) were within the 80-120% control limits. Refer to form 7.

11. All serial dilution percent differences were within SW-846 control limits. Refer to form 9.

12. The matrix spike (MS) recoveries for 3 analytes were outside the 75-125% control limits. Refer to form 5A.

13. For analytes where the MS is out of control, a post-digestion MS (PDS) is performed. A PDS was prepared at meaningful concentration levels. Refer to form 5B.

The results presented in this report relate only to the analytical testing and conditions of the samples at receipt and during storage. All pages of this report are integral parts of the analytical data. Therefore, this report should only be reproduced in its entirety of 220 pages.

208 Welsh Pool Road • Exton, PA 19341-1313 • (610) 280-3000 • Fax (610) 280-3041

14. The duplicate analyses for 2 analytes were outside the 20% Relative Percent Difference (RPD) control limits. Refer to form 6.

15. All sample IDs were changed to accommodate the EPA naming convention which allows a maximum of 6 characters on all CLP Forms. Refer to the comments section of form 1 for the original ID.

16. Recoveries on the Laboratory Summary Report and CLP forms will vary depending on the number of significant figures used in the recovery calculation.

17. I certify that this package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

METHOD REFERENCES AND DATA QUALIFIERS

DATA QUALIFIERS

U = Indicates that the parameter was not detected at or above the reported limit. The associated numerical value is the sample detection limit.

B = Indicates that the parameter was between the Instrument Detection Limit (IDL) and the Contract Required Detection Limit (CRDL)

Q QUALIFIERS

E = The reported value is estimated because of the presence of interference.

M = Duplicate injection precision not met.

N = Spiked sample recovery not within control limits.

S = The reported value was determined by the Method of Standard Additions (MSA).

W = Post Digestion spike for Furnace AA analysis is out of control limits (85 -115 %), while sample absorbance is less than 50% of spike absorbance.

* = Duplicate analysis not within control limits.

+ = Correlation coefficient for the MSA is less than 0.995.

ABBREVIATIONS

PB = Method or Preparation Blank.
S = Matrix Spike.
T = Matrix Spike Duplicate.
R or D = Sample Replicate

ANALYTICAL METAL METHODS

1. Not included in the method element list.
2. Modified Hg: Hg1 and Hg2 require less total volume of digestate due to the autosampler analysis. Sample volumes and reagents for mercury determinations in water and soil have been proportionately scaled down to adapt to this semi-automated technique. The sample volume used for water analysis is 33 mL. For soils, 0.1 grams of sample is taken to a final volume of 50 mL (including all reagents).

Sample volumes and reagents for mercury determinations in water and soil have been proportionately scaled down to adapt to this semi-automated technique. The sample volume used for water analysis is 33 mL. For soils, three 0.1 gram of sample is taken to a final volume of 50 mL (including all reagents).

Data Report for LVL Batch 0107L423
LANL Request No. 9432R

Dear Ms. Valdez:

Enclosed please find the EDD for 19 soil samples received 27 July 2001. These were analyzed for PCBs, VOAs and TPH DRO on a 30 day turnaround. The EDD is enclosed.

Please do not hesitate to contact me at (610) 280-3029 with any question you may have regarding either the hard copy or electronic report.

Very truly yours,

Lionville Laboratory Incorporated

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed upon date of resolution and contract laboratory point of contact): DRO: samples were analytes at DF=50 and surrogates were diluted out. Sample extracts were heavy with black material. All other QC were within limits.

Volatiles: Methylene chloride and acetone were detected in the blank; qualified U,V4. Methylene chloride, acetone, and 2,2-dichloropropane were not within %RSD; qualified UJ,V7a. All other QC were within limits.

PCBs: For samples -0002, -0003, -0005 contained DF=10,5,5; surrogates were diluted out. For sample -0006, surrogate tcmx was above the UAL; qualified J+,P3 if detected. For sample -0009, surrogate dcb was below the LAL; qualified UJ,P3c. All other QC were within limits.

Part Ia. Instrument Calibrations

Criteria	Criterion true? (y, n, or n/a)	Action if "criterion true?" = no	Actual time lapse
Was the initial calibration completed?	1a. yes	1b. Return the data record package to the SMO.	1c. n/a
Was the continuing calibration check performed at the beginning of each 24-hr analysis period following the analysis of the instrument performance check and before the analysis of blanks and samples? **Attention:** A continuing calibration check is not required if all samples are analyzed within 24 hrs of initial calibration—record "n/a" in blocks 2a and 2c.	2a. yes	2b. Assign the qualifier and reason code **"A, P16"** to all results. In block 2c, record the actual time lapse.	2c. na

Part Ib. Instrument Calibrations (continued)

Criteria	Criterion true? (y, n, or n/a)	Action if "criterion true?" = no	List noncompliant analyte(s) and affected samples.
Is there a standard analysis for each multicomponent analyte detected within 72 hours of the sample analysis where the multicomponent analyte was detected?	3a. na	3b. Assign the qualifier and reason code **"J, P7a"** to the detected results.	3c. na

Multilevel Calibration Method Report

Calibration curve statistics are presented on the Multilevel Calibration Method reports. This report includes the type of calibration preformed, the file reference (i.e. 06209811.06) of the calibration standards used, the slope and intercept of the curve for each analyte, and the curve fit statistics. The column labeled as "CORR COEFF" presents the coefficient of determination (r^2) for each analyte. Our laboratory acceptance criteria are based on the correlation coefficient ® being at least 0.996. Therefore, the minimum acceptance value for "CORR COEFF" (r^2) on the Multilevel Calibration Method report is 0.992.

The set of samples consisted of ten (10) soil samples collected on 07-24-01.

The samples and their associated QC samples were extracted on 08-02-01 and analyzed according to Lionville Laboratory OPs based on SW846, 3rd Edition procedures on 08-20,22,23-01. The extraction procedure was based on method 3540 and the extracts were analyzed based on method 8082 for Aroclors only.

The following is a summary of the QC results accompanying the sample results and a description of any problems encountered during their analyses:

1. The cooler temperature has been recorded on the chain-of-custody.
2. All required holding times for extraction and analysis have been met.
3. The samples and their associated QC samples received a sulfuric acid and sulfur cleanup.
4. The method blank was below the reporting limits for all target compounds.
5. Two (2) of twenty-two (22) obtainable surrogate recoveries were outside acceptance criteria; however, the surrogate recovery criteria were met (i.e., no more than one per sample).
6. The blank spike recovery was within acceptance criteria.
7. The matrix spike recoveries were within acceptance criteria.
8. Samples RC03-01-0002 03, RC03-01-0003 03 and RC03-01-0005 03 required 5 to 10-fold dilution due to high concentration of target analytes. Reporting limits have been adjusted to reflect the necessary dilutions.
9. All initial calibrations associated with this data set were within acceptance criteria.
10. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
11. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

Dear Ms. Valdez:

Enclosed please find the EDD for 19 soil samples received 27 July 2001. These were analyzed for PCBs, VOAs and TPH DRO on a 30 day turnaround. The EDD is enclosed.

Please do not hesitate to contact me at (610) 280-3029 with any question you may have regarding either the hard copy or electronic report.

Very truly yours,

Lionville Laboratory Incorporated

COOLER RECEIPT FORM

LVLI COC Batch #: 01076423 Date Cooler Received: 7-27-01

Client/Project: LANL

A. Preliminary Examination Phase

Date Cooler Opened 7-27-01 Sample Receipt Custodian Signature: Carlos Hernandez

1. Did the cooler come with a shipping slip? (airbill, etc.) YES NO
If YES, enter carrier name & airbill # here: FedEx 4847 3250 0171
2. Were custody seals present on the outside of cooler? YES NO
3. Were custody seals unbroken & intact at the date & time of arrival? YES NO
4. Were samples screened for radioactivity? YES NO
5. Were custody papers sealed in a plastic bag and taped to the inside of the cooler lid? YES NO
6. Were COC papers filled out properly? (ink, signed, etc.) YES NO
7. Did the lab sample custodian sign the COC in the appropriate place? YES NO
8. Was the project identifiable from custody papers? If YES, enter at the top of this form. YES NO
9. If required, was enough ice used? YES NO
Type of ice: blue Cooler Temperature: 5°

B. Log-In Phase:

Date Samples Logged In: 7-27-01 By: (Signature): [signature]

10. Packing Description:
11. Were all bottles sealed in plastic bags? YES NO
12. Did all bottles arrive unbroken & were labels in good condition? YES NO
13. Were all bottle labels complete? (ID, date/time, preservative, etc.) YES NO
14. Did all bottle labels agree with COC? YES NO
15. Were correct containers used for the tests indicated? YES NO
16. Did the labels indicate the correct preservatives were added to samples? YES *NO*
17. Was the pH checked and any out of expected range documented? YES *NO*
18. Was a sufficient amount of sample sent for tests indicated? YES NO
19. Were bubbles present in volatile samples? If YES, list sample ID: YES NO

20. If discrepancies were noted, was the PM called? YES NO
21. PM notified: Date:

DIESEL RANGE ORGANICS

The set of samples consisted of four (4) soil samples collected on 07-24-2001.

The samples and their associated QC samples were prepared on 07-31-2001 and analyzed according to Lionville Laboratory OPs based on EPA Method 8015B for Diesel and Oil Range Petroleum Hydrocarbons on 08-08-2001.

1. The cooler temperature has been recorded on the chain-of-custody.

2. All required holding times for extraction and analysis have been met.

3. All obtainable surrogate recoveries were within acceptance criteria.

4. The blank spike recovery was within acceptance criteria.

5. All samples required a 50-fold instrument dilution due to the high concentrations of non-target analytes with in the sample matrix. Reporting limits have been adjusted to reflect the necessary dilutions. A copy of the Sample Discrepancy Report (SDR) has been enclosed.

6. All initial calibrations associated with this data set were within acceptance criteria.

7. All diesel continuing calibration standards analyzed prior to the sample extracts were within acceptance criteria.

8. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

Volatile Organic Data Validation Checklist

Part I. Instrument Performance Checks and Calibrations

Criteria	Criterion true? (y, n, or n/a)	Action if "criterion true?" = no Assign qualifier ...	Actual time lapse
Was the instrument performance check completed on the same date as, or within 12 hours of, the corresponding sample analyses?	1a. yes	1b. **"A, SV16"** for all samples without acceptable calibration. In block 1c, record the actual time lapse.	1c. na
Was the initial calibration completed within 12 hours of completing the instrument performance check?	2a. YES	2b. **"A, SV16"** for all samples without acceptable calibration. In block 2c, record the actual time lapse.	2c. na
Was the continuing calibration check performed at the beginning of each 12-hour analysis period following the analysis of the instrument performance check and before the analysis of blanks and samples? **Attention:** A continuing calibration check is not required if all samples are analyzed within 12 hours of initial calibration—record "n/a" in blocks 3a and 3c.	3a. yes	3b. **"A, SV16"** for all samples without acceptable calibration. In block 3c, record the actual time lapse.	3c. na

Volatile Organic Data Validation Checklist

Part IIa. Method Blanks Validation Criteria

Criterion	Criterion true? (yes or no)	Action if "criterion true?" = no Assign qualifier ...	List affected matrices or batches.
Was a method blank analyzed for each sample matrix and/or 12-hour batch beginning with the BFB injection?	1a. YES	1b. **"A, V5a"** for any missing documentation. In block 1c, record all sample matrices and/or analytical batches that did not include a method blank.	1c. na

Part IIb. Method Blanks Validation Criteria (continued)

Criteria	Criterion true? (yes or no)	Action if "criterion true?" = yes Assign qualifier & reason code...	List detected blank analyte(s) and affected samples.	Analyte concentration (mg/kg)
Is a target analyte detected in both the method blank and sample **AND** is the sample result ≤ 5 times the method-blank concentration*?	2a. yes	2b. **"U, V4"** to the sample analyte(s) in question (in blocks 2c and 2d).	2c. see sheets	2d. na

* Replace "5 times" with "10 times" for laboratory contaminants acetone, 2-butanone, or methylene chloride.

Volatile Organic Data Validation Checklist

Part V. Holding Time Validation Criteria

Criteria	Criterion true? (yes/no)	Action if "criterion true?" = no Assign qualifier & reason code...	List samples for which holding times were exceeded.	List the number of days by which holding times were exceeded.
Was each sample analyzed within its required holding time?	1a. yes	1b. **"PM, V9"** to all analytes in affected samples.	1c. na	1d. na

Volatile Organic Data Validation Checklist

Part VI. Tentatively Identified Compounds (TICs) Validation Criteria

Criteria	Criterion true? (yes/no)	Action if "criterion true?" = no Assign qualifier & reason code...	Samples that are missing TICs forms	Samples that contain TICs
Were TICs requested (i.e., an "**N**" is *not* appended to the analysis order code on the chain of custody form) **AND** TICs were *not* reported in at least one sample?	1a. yes	1b. "**A, V11**" to samples that are missing documentation. In block 1d, record the sample numbers of each sample for which TICs have been reported.	1c. na	1d. na

GC/MS VOLATILE

Five (5) soil samples were collected on 07-24-2001.

The samples and their associated QC samples were analyzed according to criteria set forth in Lionville Laboratory OPs based on SW 846 Method 8260A for client specified Volatile target compounds on 08-02-2001.

The following is a summary of the QC results accompanying these sample results and a description of any problems encountered during their analyses:

1. The cooler temperature upon receipt has been recorded on the chain-of-custody.

2. The required holding time for analysis was met.

3. A non-target compound was detected in sample RC03-01-0009 06.

4. All surrogate recoveries were within EPA QC limits.

5. Matrix spike analyses are associated with LVL # 0107L410.

6. The method blank contained the common laboratory contaminants Methylene Chloride and Acetone at levels less than 2x the CRQL.

7. Internal standard area and retention time criteria were met.

8. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

9. Manual integrations are performed according to OP L-QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

Dear Ms. Valdez:

Enclosed please find the EDD for 19 soil samples received 27 July 2001. These were analyzed for PCBs, VOAs and TPH DRO on a 30 day turnaround. The EDD is enclosed.

Please do not hesitate to contact me at (610) 280-3029 with any question you may have regarding either the hard copy or electronic report.

Very truly yours,

DIESEL RANGE ORGANICS

The set of samples consisted of four (4) soil samples collected on 07-24-2001.

The samples and their associated QC samples were prepared on 07-31-2001 and analyzed according to Lionville Laboratory OPs based on EPA Method 8015B for Diesel and Oil Range Petroleum Hydrocarbons on 08-08-2001.

1. The cooler temperature has been recorded on the chain-of-custody.

2. All required holding times for extraction and analysis have been met.

3. All obtainable surrogate recoveries were within acceptance criteria.

4. The blank spike recovery was within acceptance criteria.

5. All samples required a 50-fold instrument dilution due to the high concentrations of non-target analytes with in the sample matrix. Reporting limits have been adjusted to reflect the necessary dilutions. A copy of the Sample Discrepancy Report (SDR) has been enclosed.

6. All initial calibrations associated with this data set were within acceptance criteria.

7. All diesel continuing calibration standards analyzed prior to the sample extracts were within acceptance criteria.

8. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

Lionville Laboratory Sample Discrepancy Report (SDR)

SDR #: 016C344

Initiator: John Lach. Batch: 0108L423 Parameter: ODRO
Date: 8/24/01 Samples: All Matrix: Soil
Client: LANL Method: SW846/MCAWW/CLP/ Prep Batch: 01LE0914

1. Reason for SDR

a. COC Discrepancy __ Tech Profile Error __ Client Request __ Sampler Error on C-O-C __ Transcription Error __ Wrong Test Code __ Other _____

b. General Discrepancy

__ Missing Sample/Extract* __ Container Broken __ Wrong Sample Pulled __ Label ID's Illegible
__ Hold Time Exceeded __ Insufficient Sample* __ Preservation Wrong __ Received Past Hold
__ Improper Bottle Type __ Not Amenable to Analysis

Note*: Verified by [Log-In] or [Prep Group] (circle)...signature/date: _____

c. Problem (Include all relevant specific results; attach data if necessary)

Sample extracts are heavy, tarry black material. Sample extracts are not amenable to analysis at low dilutions

2. Known or Probable Causes(s) matrix.

3. Discussion and Proposed Action

__ Re-log
__ Entire Batch
__ Following Samples: _____
__ Re-leach
__ Re-extract
__ Re-digest
__ Revise EDD
__ Change Test Code to _____
__ Place On/Take Off Hold (circle)

Other Description:

run at 50x dilution, adjust reporting limits

4. Project Manager Instructions...signature/date: JL 8/24/01

__ Concur with Proposed Action
__ Disagree with Proposed Action; See Instruction
✓ Include in Case Narrative
__ Client Contacted:

GLOSSARY OF DIESEL RANGE ORGANICS DATA

DATA QUALIFIERS

U	=	Indicates that the compound was analyzed for but not detected. The minimum detection limit for the sample (not the method detection limit) is reported with the U (e.g. 10U).
J	=	Indicates an estimated value. This flag is used in cases where a target analyte is detected at a level less than the lower quantification level. If the limit of quantification is 10ug/L and a concentration of 3 ug/L is calculated, it is reported as 3J.
B	=	This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination.
E	=	Indicates a compound was detected beyond the calibration range and was subsequently analyzed at a dilution.
I	=	Interference.

ABBREVIATIONS

BS	=	Indicates blank spike reagent grade water spiked with the matrix spiking solution. Spike recoveries are reported.
BSD	=	Indicates a blank spike duplicate.
MS	=	Indicates a matrix spike.
MSD	=	Indicates a matrix spike duplicate.
NA	=	Not Applicable.
NS	=	Not spiked.
DF	=	Dilution factor.
NR	=	Not required.
SP	=	Indicates a spiked compound.

Multilevel Calibration Method Report

Calibration curve statistics are presented on the Multilevel Calibration Method reports. This report includes the type of calibration preformed, the file reference (i.e. 06209811.06) of the calibration standards used, the slope and intercept of the curve for each analyte, and the curve fit statistics. The column labeled as "CORR COEFF" presents the coefficient of determination (r^2) for each analyte. Our laboratory acceptance criteria are based on the correlation coefficient ® being at least 0.996. Therefore, the minimum acceptance value for "CORR COEFF" (r^2) on the Multilevel Calibration Method report is 0.992.

GC/MS VOLATILE

Five (5) soil samples were collected on 07-24-2001.

The samples and their associated QC samples were analyzed according to criteria set forth in Lionville Laboratory OPs based on SW 846 Method 8260A for client specified Volatile target compounds on 08-02-2001.

The following is a summary of the QC results accompanying these sample results and a description of any problems encountered during their analyses:

1. The cooler temperature upon receipt has been recorded on the chain-of-custody.

2. The required holding time for analysis was met.

3. A non-target compound was detected in sample RC03-01-0009 06.

4. All surrogate recoveries were within EPA QC limits.

5. Matrix spike analyses are associated with LVL # 0107L410.

6. The method blank contained the common laboratory contaminants Methylene Chloride and Acetone at levels less than 2x the CRQL.

7. Internal standard area and retention time criteria were met.

8. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

9. Manual integrations are performed according to OP L-QA-125 to produce quality data with the utmost integrity. All manual integrations are required to be technically valid and properly documented. Appropriate technical flags are defined in the Glossary ("Technical Flags For Manual Integration").

GLOSSARY OF VOA DATA

ABBREVIATIONS

BS	=	Indicates blank spike in which reagent grade water is spiked with the CLP matrix spike solutions and carried through all the steps in the method. Spike recoveries are reported.
BSD	=	Indicates blank spike duplicate.
MS	=	Indicates matrix spike.
MSD	=	Indicates matrix spike duplicate.
DL	=	Suffix added to sample number to indicate that results are from a diluted analysis.
NA	=	Not Applicable.
DF	=	Dilution Factor.
NR	=	Not Required.
SP, Z	=	Indicates Spiked Compound.

GLOSSARY OF VOA DATA

DATA QUALIFIERS

U = Compound was analyzed for but not detected. The associated numerical value is the estimated sample quantitation limit which is included and corrected for dilution and percent moisture.

J = Indicates an estimated value. This flag is used under the following circumstances: 1) when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed; or 2) when the mass spectral data indicate the presence of a compound that meets the identification criteria but the result is less than the specified detection limit but greater than zero. For example, if the limit of detection is 10 ug/L and a concentration of 3 ug/L is calculated, it is reported as 3J.

B = This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination. This flag is also used for a TIC as well as for a positively identified TCL compound.

E = Indicates that the compound was detected beyond the calibration range and was subsequently analyzed at a dilution.

D = Identifies all compounds identified in an analysis at a secondary dilution factor.

I = Interference.

NQ = Result qualitatively confirmed but not able to quantify.

N = Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the N code is not used.

X = This flag is used for a TIC compound which is quantified relative to a response factor generated from a daily calibration standard (rather than quantified relative to the closest internal standard).

Y = Additional qualifiers used as required are explained in the case narrative.

TECHNICAL FLAGS FOR MANUAL INTEGRATION

Manual quan modifications or integrations are performed routinely to improve the data quality for a variety of technical reasons. Documentation of these modifications should be clear and concise. The following "flags" are used to indicate the technical reasons for quan modifications:

MP - Missed Peak: manually added peak not found by automatic quan program.

PA - Peak Assignment: quan report was changed to reflect correct peak assignment.

RI - Routine Integration: routine integrations are performed for some analytes that are consistently integrated improperly by the automatic integration programs. Examples are the dichlorobenzene isomers on the VOA packed column and benzo(b)fluoranthene/benzo(k)fluoranthene which are poorly resolved on the BNA column.

SP - Split Peak: the automatic integration improperly split the peak; a manual integration was performed to get the correct area.

CB - Coelution/Background: peak was manually integrated to eliminate contribution from coeluting compounds, background signal, or other interference.

PI - Proper Integration: a peak with poor or inconsistent integration (e.g., excessive tail) was properly integrated manually.

Analytical Report

Client: LANL REQ.#9432R
LVL#: 0107L423
Subcontract #: 7791L0014-8S

W.O.#: 02744-064-001-9999-00
Date Received: 07-27-01

PCB

The set of samples consisted of ten (10) soil samples collected on 07-24-01.

The samples and their associated QC samples were extracted on 08-02-01 and analyzed according to Lionville Laboratory OPs based on SW846, 3rd Edition procedures on 08-20,22,23-01. The extraction procedure was based on method 3540 and the extracts were analyzed based on method 8082 for Aroclors only.

The following is a summary of the QC results accompanying the sample results and a description of any problems encountered during their analyses:

1. The cooler temperature has been recorded on the chain-of-custody.
2. All required holding times for extraction and analysis have been met.
3. The samples and their associated QC samples received a sulfuric acid and sulfur cleanup.
4. The method blank was below the reporting limits for all target compounds.
5. Two (2) of twenty-two (22) obtainable surrogate recoveries were outside acceptance criteria; however, the surrogate recovery criteria were met (i.e., no more than one per sample).
6. The blank spike recovery was within acceptance criteria.
7. The matrix spike recoveries were within acceptance criteria.
8. Samples RC03-01-0002 03, RC03-01-0003 03 and RC03-01-0005 03 required 5 to 10-fold dilution due to high concentration of target analytes. Reporting limits have been adjusted to reflect the necessary dilutions.
9. All initial calibrations associated with this data set were within acceptance criteria.
10. All continuing calibration standards analyzed prior to sample extracts were within acceptance criteria.
11. I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, except as detailed in this QC Report.

GLOSSARY OF PESTICIDE/PCB DATA

DATA QUALIFIERS

U = Indicates that the compound was analyzed for but not detected. The minimum detection limit for the sample (not the method detection limit) is reported with the U (e.g., 10U).

J = Indicates an estimated value. This flag is used in cases where a target analyte is detected at a level less than the lower quantification level. If the limit of quantification is 10 ug/L and a concentration of 3 ug/L is calculated, it is reported as 3J.

B = This flag is used when the analyte is found in the associated blank as well as in the sample. It indicates possible/probable blank contamination.

E = Indicates that the compound was detected beyond the calibration range and was subsequently analyzed at a dilution.

I = Interference.

ABBREVIATIONS

BS = Indicates blank spike in which reagent grade water is spiked with the CLP matrix spiking solutions and carried through all the steps in the method. Spike recoveries are reported.

BSD = Indicates blank spike duplicate.

MS = Indicates matrix spike.

MSD = Indicates matrix spike duplicate.

DL = Indicates that recoveries were not obtained because the extract had to be diluted for analysis.

NA = Not Applicable.

DF = Dilution Factor.

NR = Not Required.

SP = Indicates Spiked Compound.

GLOSSARY OF PESTICIDE/PCB DATA

P	=	This flag is used for an PESTICIDE/PCB target analyte when there is greater than 25% difference for detected concentrations between the two GC columns (see Form X). The lower of the two values is reported on Form I and flagged with a "P".
D	=	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
C	=	This flag applies to a compound that has been confirmed by GC/MS.

Multilevel Calibration Method Report

Calibration curve statistics are presented on the Multilevel Calibration Method reports. This report includes the type of calibration preformed, the file reference (i.e. 06209811.06) of the calibration standards used, the slope and intercept of the curve for each analyte, and the curve fit statistics. The column labeled as "CORR COEFF" presents the coefficient of determination (r^2) for each analyte. Our laboratory acceptance criteria are based on the correlation coefficient ® being at least 0.996. Therefore, the minimum acceptance value for "CORR COEFF" (r^2) on the Multilevel Calibration Method report is 0.992.
