Route to:

Date: 8/14/07

File Name (owner): DP Site Aggregate Area TA-21

Time: AM or PM 9:00

Person: Mark Thacker / Kelly VanderPool / Roy Bohn

Firm:

Phone No.: 699-1963

Recorded By: KMR

Subject: Stockpiling of layback + overburden material

Remarks:

① LANL has been containerizing all waste (remediation overburden), but running out of space + bins.
② Asked if overburden only could be stockpiled on the grand rather than in bins. NMED - yes, as long as its on a tarp or plastic of same kind + berms are installed to prevent run-on / run-off
③ The material is still being characterized + the 90-day clock is being used. If analytical results indicate hazardous consituents above Residential SSLs → the material will be disposed of appropriately. This also applies to radionuclides.
④ LDRs - Do not apply to this because the material may be used again, therefore not a waste.

Action Required: A literal interpretation of the regs suggests that it is waste. However, NMED concurs w/ LANL's approach.

Action Taken: Site visit on 8/22/07
