COMPANY - WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
24-JUN-05	Federal	Specifications	Process
Instrument Type:	**Test / Method:**	**Matrix Type:**	**Client Code:**
LACHAT Flow Injection Analyzer	EPA 351.2	Liquid	ESHL
Batch ID:	**Sample Numbers:**		
436361	See Below		

Potentially affected work order(s)(SDG): 138850,138851,138903,138990,139056

Application Issues:

Failed Recovery for MS/PS

Specification and Requirements Nonconformance Description:	NRG Disposition:
1. Failed Recovery for LCS/MS/PS: QC 1200872972MS,1200872975MS, 1200872976MS	1. Sample spike recoveries failed due to matrix interference for 1200872972MS,1200872975MS. The samples and their duplicates showed double peaks, a sign of matrix interference. The blank and the LCS passed showing that the prep method works for the 1200872976MS, which failed high. The spike that failed high was repoured and reanalyzed along with the sample and sample duplicate to verify failing MS.

RADIOLOGICAL ANALYSIS

Radiochemistry Case Narrative
Los Alamos National Laboratory (ESHL)
Work Order 138851

Method/Analysis Information

Product:	**Alphaspec Am241 Liquid**
Analytical Method:	DOE EML HASL-300, Am-05-RC Modified
Analytical Batch Number:	435429

Sample ID	Client ID
138851001	GF05050GMC601
138851002	GF05050GMC690
138851003	GU05050GMC601
138851004	GU05050GMC690
1200870937	Method Blank (MB)
1200870938	138373002(GU05060P12301) Sample Duplicate (DUP)
1200870939	Laboratory Control Sample (LCS)

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-RAD-A-011 REV# 14.

Calibration Information:

Calibration Information
All initial and continuing calibration requirements have been met.
Calibrations are performed monthly using mixed alpha standards comprised of the following: Gd-148, Np-237, and Cm-244.

Standards Information
Standard solution(s) for these analyses are NIST traceable and used before the expiration date(s).

Sample Geometry
All counting sources were prepared in the same geometry as the calibration standards.

Quality Control (QC) Information:

Blank Information
The blank volume is representative of the sample volume in this batch.

Designated QC
The following sample was used for QC: 138373002 (GU05060P12301).
The QC sample is from ESHL work order 138373.

QC Information
All of the QC samples met the required acceptance limits.

Technical Information:

Holding Time
All sample procedures for this sample set were performed within the required holding time.

Preparation Information

All preparation criteria have been met for these analyses.

Sample Re-prep/Re-analysis
None of the samples in this sample set required reprep or reanalysis.

Miscellaneous Information:

NCR Documentation
Nonconformance reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. An NCR was not generated for this SDG.

Manual Integration
No manual integrations were performed on data in this batch.

Additional Comments
A spreadsheet for MDA calculations using a blank population is included in the Raw Data section of the package. Aliquots for samples 1200870937 (MB) and 1200870939 (LCS) were changed to 1.0 per client request.

Qualifier information
Manual qualifiers were not required.

Method/Analysis Information

Product:	**Alphaspec Pu, Liquid**
Analytical Method:	DOE EML HASL-300, Pu-11-RC Modified
Analytical Batch Number:	435430

Standards Information
Standard solution(s) for these analyses are NIST traceable and used before the expiration date(s).

Sample Geometry
All counting sources were prepared in the same geometry as the calibration standards.

Quality Control (QC) Information:

Blank Information
The blank volume is representative of the sample volume in this batch.

Designated QC
The following sample was used for QC: 138373002 (GU05060P12301).
The QC sample is from ESHL work order 138373.

QC Information
All of the QC samples met the required acceptance limits.

Technical Information:

Holding Time
All sample procedures for this sample set were performed within the required holding time.

Preparation Information
All preparation criteria have been met for these analyses.

Sample Re-prep/Re-analysis
Sample 1200870942 (LCS) was recounted due to a peak shift.

Miscellaneous Information:

NCR Documentation
Nonconformance reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. The following NCR was generated for this SDG:
NCR 217492 was generated due to RDL less than MDA. 1. The RDL is less than the MDA for 138373001, 138675001, 138800002, 138800003, 138800004, 138851002, and 138905005. When a blank population is performed, the MDA is greater than the RDL due to the high standard deviation. 2. Samples 138675001 and 138800004 fail to meet the client tracer recovery requirements, however they do have over 400 tracer counts and meet the GEL standard tracer recovery requirements. 1. Reporting results. 2. Reporting results.

Manual Integration
No manual integrations were performed on data in this batch.

Additional Comments
A spreadsheet for MDA calculations using a blank population is included in the Raw Data section of the package.
Aliquots for samples 1200870940 (MB) and 1200870942 (LCS) were changed to 1.0 per client request.
Pu-238 blank activity is greater than the DLC, but less than the MDA.

Qualifier information
Manual qualifiers were not required.

Standard solution(s) for these analyses are NIST traceable and used before the expiration date(s).

Sample Geometry
All counting sources were prepared in the same geometry as the calibration standards.

Quality Control (QC) Information:

Blank Information
The blank volume is representative of the sample volume in this batch.

Designated QC
The following sample was used for QC: 138373002 (GU05060P12301).
The QC sample is from ESHL work order 138373.

QC Information
All of the QC samples met the required acceptance limits.

Technical Information:

Holding Time
All sample procedures for this sample set were performed within the required holding time.

Preparation Information
All preparation criteria have been met for these analyses.

Sample Re-prep/Re-analysis
None of the samples in this sample set required reprep or reanalysis.

Miscellaneous Information:

NCR Documentation
Nonconformance reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. An NCR was not generated for this SDG.

Manual Integration
No manual integrations were performed on data in this batch.

Additional Comments
A spreadsheet for MDA calculations using a blank population is included in the Raw Data section of the package.

Aliquots for samples 1200870943 (MB) and 1200870945 (LCS) were changed to 1.0 per client request.

Qualifier information
Manual qualifiers were not required.

Method/Analysis Information

Product:	**Gammaspec, Gamma, Liquid (Standard List)**
Analytical Method:	EPA 901.1
Analytical Batch Number:	435282

138851001	GF05050GMC601
138851002	GF05050GMC690
138851003	GU05050GMC601
138851004	GU05050GMC690
1200870615	Method Blank (MB)
1200870616	138675001(GF0506G16R201) Sample Duplicate (DUP)
1200870617	Laboratory Control Sample (LCS)

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-RAD-A-013 REV# 10.

Calibration Information:

Calibration Information
All initial and continuing calibration requirements have been met.
The initial calibrations were performed as follows: October 2004, December 2004, January 2005 and March 2005.

Standards Information
Standard solution(s) for these analyses are NIST traceable and used before the expiration date(s).

Sample Geometry
All counting sources were prepared in the same geometry as the calibration standards.

Quality Control (QC) Information:

Blank Information
The blank volume is representative of the sample volume in this batch.

Designated QC
The following sample was used for QC: 138675001 (GF0506G16R201).
The QC sample is from ESHL work order 138675.

QC Information
All of the QC samples met the required acceptance limits.

Technical Information:

Holding Time
All sample procedures for this sample set were performed within the required holding time.

Preparation Information

All preparation criteria have been met for these analyses.

Sample Re-prep/Re-analysis
Sample 1200870616 (GF0506G16R201) was recount due to analyst error.

Miscellaneous Information:

NCR Documentation
Nonconformance reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. An NCR was not generated for this SDG.

Qualifier information

Qualifier	Reason	Analyte	Sample
UI	Data rejected due to low abundance.	Potassium-40	138851002
UI	Data rejected due to no valid peak.		1200870615

1200874007	Laboratory Control Sample (LCS)

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-RAD-A-001 REV# 9.

Calibration Information:

Calibration Information
All initial and continuing calibration requirements have been met.
The initial calibration was performed on July 19, 2004.

Standards Information
Standard solution(s) for these analyses are NIST traceable and used before the expiration date(s).

Sample Geometry
All counting sources were prepared in the same geometry as the calibration standards.

Quality Control (QC) Information:

Blank Information

The blank volume is representative of the sample volume in this batch.

Designated QC
The following sample was used for QC: 138675002 (GU0506G16R201).
The QC sample is from ESHL work order 138675.

QC Information
All of the QC samples met the required acceptance limits.

Technical Information:

Holding Time
All sample procedures for this sample set were performed within the required holding time.

Preparation Information
All preparation criteria have been met for these analyses.

Sample Re-prep/Re-analysis
Sample 1200874005 (GU0506G16R201) was recounted due to low/high recovery.

Chemical Recoveries
All chemical recoveries meet the required acceptance limits for this sample set.

Gross Alpha/Beta Preparation Information
High hygroscopic salt content in evaporated samples can cause the sample mass to fluctuate due to moisture absorption. To minimize this interference, the salts are converted to oxides by heating the sample under a flame until a dull red color is obtained. The conversion to oxides stabilizes the sample weight and ensures that proper alpha/beta efficiencies are assigned for each sample. Volatile radioisotopes of carbon, hydrogen, technetium, polonium and cesium may be lost during sample heating, especially to a dull red heat. For this sample set, the prepared planchet was counted for beta activity before being flamed. After flaming, the planchet was counted for alpha activity. This sequence causes the alpha count run data to record over the beta count run data in AlphaLims, therefore only the alpha count data will appear on the instrument runlog.

Miscellaneous Information:

NCR Documentation
Nonconformance reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. An NCR was not generated for this SDG.

Additional Comments
Aliquots for samples 1200874003 (MB) and 1200874007 (LCS) were changed to 1.0 per client request.

Qualifier information
Manual qualifiers were not required.

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-RAD-A-008 REV# 8.

Calibration Information:

Calibration Information
All initial and continuing calibration requirements have been met.
The initial calibrations were performed as follows: Detector 1 was calibrated on December 9, 2004. Detector 4 was calibrated on September 23, 2004. Detector 5 was calibrated on November 8, 2004. Detector 6 was calibrated on November 22, 2004.

Standards Information
Standard solution(s) for these analyses are NIST traceable and used before the expiration date(s).

Sample Geometry
All counting sources were prepared in the same geometry as the calibration standards.

Quality Control (QC) Information:

Blank Information
The blank volume is representative of the sample volume in this batch.

Designated QC
The following sample was used for QC: 138851001 (GF05050GMC601).

QC Information
All of the QC samples met the required acceptance limits.

Technical Information:

Holding Time
All sample procedures for this sample set were performed within the required holding time.

Preparation Information
All preparation criteria have been met for these analyses.

Sample Re-prep/Re-analysis
None of the samples in this sample set required reprep or reanalysis.

Miscellaneous Information:

NCR Documentation
Nonconformance reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. An NCR was not generated for this SDG.

Additional Comments
Aliquots for samples 1200875441 (MB) and 1200875444 (LCS) were changed to 1.0 per client request.
The blank result is greater than the decision level, but less than the mdc.

Qualifier information
Manual qualifiers were not required.

Certification Statement
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:
GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP

or CLP-like packaging will receive a third level validation upon completion of the data package.
The following data validator verified the information presented in this case narrative:

Reviewer: H Paille G Crow 7/13/05

NCR Report No.: 217492
Revision No.:

COMPANY - WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
06-JUL-05	Radiochemistry	Specifications	Process
Instrument Type:	**Test / Method:**	**Matrix Type:**	**Client Code:**
ALPHA SPECTROMETER	DOE EML HASL-300, Pu-11-RC Modified	Liquid	ESHL
Batch ID:	**Sample Numbers:**		
435430	See Below		

Potentially affected work order(s)(SDG): 138373,138436,138675,138800,138851,138905

Application Issues:

RDL less than MDA

Specification and Requirements Nonconformance Description:	NRG Disposition:
1. The RDL is less than the MDA for 138373001, 138675001, 138800002, 138800003, 138800004, 138851002, and 138905005. When a blank population is performed, the MDA is greater than the RDL due to the high standard deviation.	1. Reporting results.
2. Samples 138675001 and 138800004 fail to meet the client tracer recovery requirements, however they do have over 400 tracer counts and meet the GEL standard tracer recovery requirements.	2. Reporting results.

SAMPLE DATA SUMMARY

GENERAL ENGINEERING LABORATORIES, LLC

2040 Savage Road Charleston SC 29407 - (843) 556-8171 - www.gel.com

Certificate of Analysis Report
for

ESHL001 Los Alamos National Laboratory (17809)

Client SDG: 138851 GEL Work Order: 138851

The Qualifiers in this report are defined as follows:

** Indicates the analyte is a surrogate compound.
< Result is less than amount reported.
> Result is greater than amount reported.
B Target analyte was detected in the sample as well as the associated blank.
BD Results below the MDC or low tracer recovery.
E Concentration of the target analyte exceeds the instrument calibration range.
H Analytical holding time exceeded.
J Indicates an estimated value.
P The response between the confirmation and the primary columns is >40% Different.
R Sample results are rejected.
U Target analyte was analyzed for but not detected above the MDL or LOD.
UI Uncertain identification for gamma spectroscopy.
X Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
Y QC Samples were not spiked with this compound.
Z Paint Filter qualifier: Particulates passed through the filter. No free liquids were observed.
h Sample preparation or preservation holding time exceeded.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.
** Indicates the analyte is a surrogate compound.
This data report has been prepared and reviewed in accordance with General Engineering Laboratories, LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Surrogate/Tracer recovery	Test	Recovery%	Acceptable Limits
Americium−243	Alphaspec Am241 Liquid	80	(25%−125%)
Plutonium−242	Alphaspec Pu, Liquid	78	(15%−125%)
Uranium−232	Alphaspec U, Liquid	79	(25%−125%)
Carrier/Tracer Recovery	GFPC, Sr90, liquid	71	(25%−125%)

Notes:
TPU is calculated at the 67% confidence level (1−sigma).
The Qualifiers in this report are defined as follows :

** Indicates the analyte is a surrogate compound.
< Result is less than amount reported.
> Result is greater than amount reported.
B Target analyte was detected in the sample as well as the associated blank.
BD Results below the MDC or low tracer recovery.
E Concentration of the target analyte exceeds the instrument calibration range.
H Analytical holding time exceeded.
J Indicates an estimated value.
P The response between the confirmation and the primary columns is >40% Different.
R Sample results are rejected.
U Target analyte was analyzed for but not detected above the MDL or LOD.
UI Uncertain identification for gamma spectroscopy.
X Lab−specific qualifier−please see case narrative, data summary package or contact your project manager for details.
Y QC Samples were not spiked with this compound.
Z Paint Filter qualifier: Particulates passed through the filter. No free liquids were observed.
h Sample preparation or preservation holding time exceeded.

< Result is less than amount reported.
> Result is greater than amount reported.
B Target analyte was detected in the sample as well as the associated blank.
BD Results below the MDC or low tracer recovery.
E Concentration of the target analyte exceeds the instrument calibration range.
H Analytical holding time exceeded.
J Indicates an estimated value.
P The response between the confirmation and the primary columns is >40% Different.
R Sample results are rejected.
U Target analyte was analyzed for but not detected above the MDL or LOD.
UI Uncertain identification for gamma spectroscopy.
X Lab−specific qualifier−please see case narrative, data summary package or contact your project manager for details.
Y QC Samples were not spiked with this compound.
Z Paint Filter qualifier: Particulates passed through the filter. No free liquids were observed.
h Sample preparation or preservation holding time exceeded.
The above sample is reported on an "as received" basis.

QC Summary

Workorder: **138851**

Parmname	NOM	Sample	Qual	QC	Units	RER	REC%	Range	Anlst	Date	Time

Notes:
The Qualifiers in this report are defined as follows:

**	Indicates the analyte is a surrogate compound.
<	Result is less than amount reported.
>	Result is greater than amount reported.
B	Target analyte was detected in the sample as well as the associated blank.
BD	Results below the MDC or low tracer recovery.
E	Concentration of the target analyte exceeds the instrument calibration range.
H	Analytical holding time exceeded.
J	Indicates an estimated value.
P	The response between the confirmation and the primary columns is >40% Different.
R	Sample results are rejected.
U	Target analyte was analyzed for but not detected above the MDL or LOD.
UI	Uncertain identification for gamma spectroscopy.
X	Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
Y	QC Samples were not spiked with this compound.
Z	Paint Filter qualifier: Particulates passed through the filter. No free liquids were observed.
h	Sample preparation or preservation holding time exceeded.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.
** Indicates analyte is a surrogate compound.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptence criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

RAW DATA

Radiochemistry Batch Checklist, Rev 3

Batch# 435429 Product: AM Date: 7/1/05

Criteria:	Yes	No	Comments
Sample Solids are less than 100 mg			NA
If activity less 10* RDL, error is 150% or less of sample activity. If greater 10* RDL, error is 40% or less. If below the RDL, error is okay.	~		
Instrument source check is within limits. Instument bkg check is within limits.	~		
Method RDL has been met.	~		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	~		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .	~		
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	~		
Sample was run within hold time. Special requirements page checked	~		
Sample was correctly preserved if required.	~		
Smears Taken for Radioactive batches.			NA
Method Spike and LCS are within 75-125%.	~		
No blank spaces on data forms. All lineouts initialed and dated. No transcription errors are apparent.	~		
QC data entered into QC database. Batch entered into Case Narrative.	~		
Batch non-conformances completed If applicable.			NA

Radiochemistry Batch Checklist, Rev 3

Batch# 435430 Product: PU Date: 7/6/05

Criteria:	Yes	No	Comments
Sample Solids are less than 100 mg			NA
If activity less 10* RDL, error is 150% or less of sample activity. If greater 10* RDL, error is 40% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.		✓	NCR # 217492
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.			
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .		✓	NCR # 217492
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
Sample was run within hold time. Special requirements page checked	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.	✓		
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms. All lineouts initialed and dated. No transcription errors are apparent.	✓		
QC data entered into QC database. Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable.	✓		NCR # 217492

Radiochemistry Batch Checklist, Rev 3

Batch# 435437 Product: U Date: 6/30/05

Criteria:	Yes	No	Comments
Sample Solids are less than 100 mg			NA
If activity less 10* RDL, error is 150% or less of sample activity. If greater 10* RDL, error is 40% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .	✓		
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
Sample was run within hold time. Special requirements page checked	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.			NA
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms. All lineouts initialed and dated. No transcription errors are apparent.	✓		
QC data entered into QC database. Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable.			NA

Radiochemistry Batch Checklist, Rev 3

Batch# 435252 Product: 8260 ESHL Date: 7/5/05

Criteria:	Yes	No	Comments
Sample Solids are less than 100 mg			N/A
If activity less 10* RDL, error is 150% or less of sample activity. If greater 10* RDL, error is 40% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits.	✓		
Instument bkg check is within limits.			
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%.			
Carrier yield is 25-125% .			N/A
Method blank is less than the RDL.	✓		
(If rad samples, < 5% of lowest activity)			
Sample was run within hold time.	✓		
Special requirements page checked			
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.			N/A
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms.			
All lineouts initialed and dated.	✓		
No transcription errors are apparent.			
QC data entered into QC database.	✓		
Batch entered into Case Narrative.			
Batch non-conformances completed			
If applicable.			N/A

VMS Nuclide Identification Report V2.9 Generated 1-JUL-2005 07:31:58

Configuration : DKA300:[CANBERRA.GAMMA.ARCHIVE.GAMMA]G138851001.CNF;1
Analyses by : PEAK V16.4,PEAKEFF V2.2,ENBACK V1.5,NID V3.0,MINACT V2.4
Sample title : AKB
Sample date : 15-JUN-2005 09:07:00 Acquisition date : 30-JUN-2005 23:31:24
Sample ID : G138851001 Sample quantity : 2.0000 LITER
Sample type : EPI Sample geometry :
Detector name : Detector geometry: 2L_MB
Elapsed live time: 0 08:00:00.00 Elapsed real time: 0 08:00:02.87 0.0%
Peak Width (FWHM): 2.50 Confidence level : 5.00 %
Energy tolerance : 2.00 KEV Half life ratio : 8.00
Errors propagated: Yes Systematic Error : 0.00 %
Efficiency type : Empirical Efficiencies at : Peak Energy
Abundance limit : 75.00 WTM error limit : 3.00

VMS Nuclide Identification Report V2.9 Generated 1-JUL-2005 23:15:42

Configuration : DKA300:[CANBERRA.GAMMA.ARCHIVE.GAMMA]G138851004.CNF;1
Analyses by : PEAK V16.4,PEAKEFF V2.2,ENBACK V1.5,NID V3.0,MINACT V2.4
Sample title : AKB
Sample date : 15-JUN-2005 09:07:00 Acquisition date : 1-JUL-2005 15:14:28
Sample ID : G138851004 Sample quantity : 2.0000 LITER
Sample type : EPI Sample geometry :
Detector name : Detector geometry: 2L_MB
Elapsed live time: 0 08:00:00.00 Elapsed real time: 0 08:00:02.98 0.0%
Peak Width (FWHM): 2.50 Confidence level : 5.00 %
Energy tolerance : 2.00 KEV Half life ratio : 8.00
Errors propagated: Yes Systematic Error : 0.00 %
Efficiency type : Empirical Efficiencies at : Peak Energy
Abundance limit : 75.00 WTM error limit : 3.00

Radiochemistry Batch Checklist, Rev 3

Batch# 435482 Product: GAB Date: 7/8/05

Criteria:	Yes	No	Comments
Sample Solids are less than 100 mg	✓		
If activity less 10* RDL, error is 150% or less of sample activity. If greater 10* RDL, error is 40% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .			NA
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
Sample was run within hold time. Special requirements page checked	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.			NA
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms. All lineouts initialed and dated. No transcription errors are apparent.	✓		
QC data entered into QC database. Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable.			NA

Radiochemistry Batch Checklist, Rev 3

Batch# 435484 Product: Sr-90 Date: 7/1/05

Criteria:	Yes	No	Comments
Sample Solids are less than 100 mg			NA
If activity less 10* RDL, error is 150% or less of sample activity. If greater 10* RDL, error is 40% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .	✓		
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
Sample was run within hold time. Special requirements page checked	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.			NA
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms. All lineouts initialed and dated. No transcription errors are apparent.	✓		
QC data entered into QC database. Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable.			NA

Strontium-90 Water

Filename : SR90.XLS
File type : Excel
Version # : 1

Batch : 435484
Analyst : EXW1
Prep Date : 6/27/2005
Sr-90 Abundance : 1

Calibration Date : 11/2/2004
Calibration Due Date : 11/2/2005

Spike S/N : 0133-N
Spike Exp Date : 5/25/2006
Spike Activity (dpm/ml): 397.87
Spike Volume Added: 0.1

LCS S/N : 0133-N
LCS Exp Date : 5/25/2006
LCS Activity (dpm/ml): 397.87
LCS Volume Added: 0.1

Carrier S/N : 1005753
Carrier Exp Date : 11/13/2006
Carrier Volume Added: 0.5
Carrier Weight (mg/ml): 17.83
Carrier Weight StDev.: 0.07

Pipet, 0.1 ml Stdev : +/-	0.000701	ml
Pipet, 0.5 ml Stdev : +/-	0.002564	ml
Pipet, 1 ml Stdev : +/-	0.005480	ml
Procedure Code :	GFC90SRL	
Parmname :	Strontium-90	
Required MDC:	0.4	pCi/L
Halflife of Sr-90 :	28.6	years
Halflife of Y-90 :	64.1	hours
Batch counted on :	PIC	
BKG Count time :	500	min

Radiochemistry Batch Checklist for LSC, Rev 3

Batch# 435237 Product: H-3 Date: 7/7/05

Criteria:	Yes	No	Comments
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
If activity less 10* RDL, error is 100% or less of sample activity. If greater 10* RDL, error is 20% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .	NA		
No transcription errors are apparent. Checked special requirements page	✓		
Sample was run within hold time.	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.	NA		
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms. All lineouts initialed and dated.	✓		
Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable. 7/7/05	NA ✓		NCR 217874

Radiochemistry Batch Checklist for LSC, Rev 3

Batch# 435379 Product: Tc-99 Date: 7/5/05

Criteria:	Yes	No	Comments
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
If activity less 10* RDL, error is 100% or less of sample activity. If greater 10* RDL, error is 20% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .	✓		Case narrative
No transcription errors are apparent. Checked special requirements page	✓		
Sample was run within hold time.	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.			NA
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms. All lineouts initialed and dated.	✓		
Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable.			NA

Radiochemistry Batch Checklist for LSC, Rev 3

Batch# 4381360 Product: Tc-99 Date: 7/6/05

Criteria:	Yes	No	Comments
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
If activity less 10* RDL, error is 100% or less of sample activity. If greater 10* RDL, error is 20% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .	✓		
No transcription errors are apparent. Checked special requirements page	✓		
Sample was run within hold time.	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.			NA
Method Spike and LCS are within 75-125%.	✓		
No blank spaces on data forms. All lineouts initialed and dated.	✓		
Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable.			NA

Radiochemistry Batch Checklist, Rev 3

Batch# 437415 Product: Ra-226 Date: 7/6/15

Criteria:	Yes	No	Comments
Sample Solids are less than 100 mg			NA
If activity less 10* RDL, error is 150% or less of sample activity. If greater 10* RDL, error is 40% or less. If below the RDL, error is okay.	✓		
Instrument source check is within limits. Instument bkg check is within limits.	✓		
Method RDL has been met.	✓		
If duplicate activities are less 5* RDL, then rpd is 100% or less. If greater 5*, then rpd 20% or less. If below the RDL, the rpd is 0%.	✓		
Tracer yield is 15-125% . WSRC is 25-125%. Carrier yield is 25-125% .			NA
Method blank is less than the RDL. (If rad samples, < 5% of lowest activity)	✓		
Sample was run within hold time. Special requirements page checked	✓		
Sample was correctly preserved if required.	✓		
Smears Taken for Radioactive batches.	✓		NA
Method Spike and LCS are within 75-125%.	✓ 7/6/15		
No blank spaces on data forms. All lineouts initialed and dated. No transcription errors are apparent.	✓ ✓		
QC data entered into QC database. Batch entered into Case Narrative.	✓		
Batch non-conformances completed If applicable.			NA

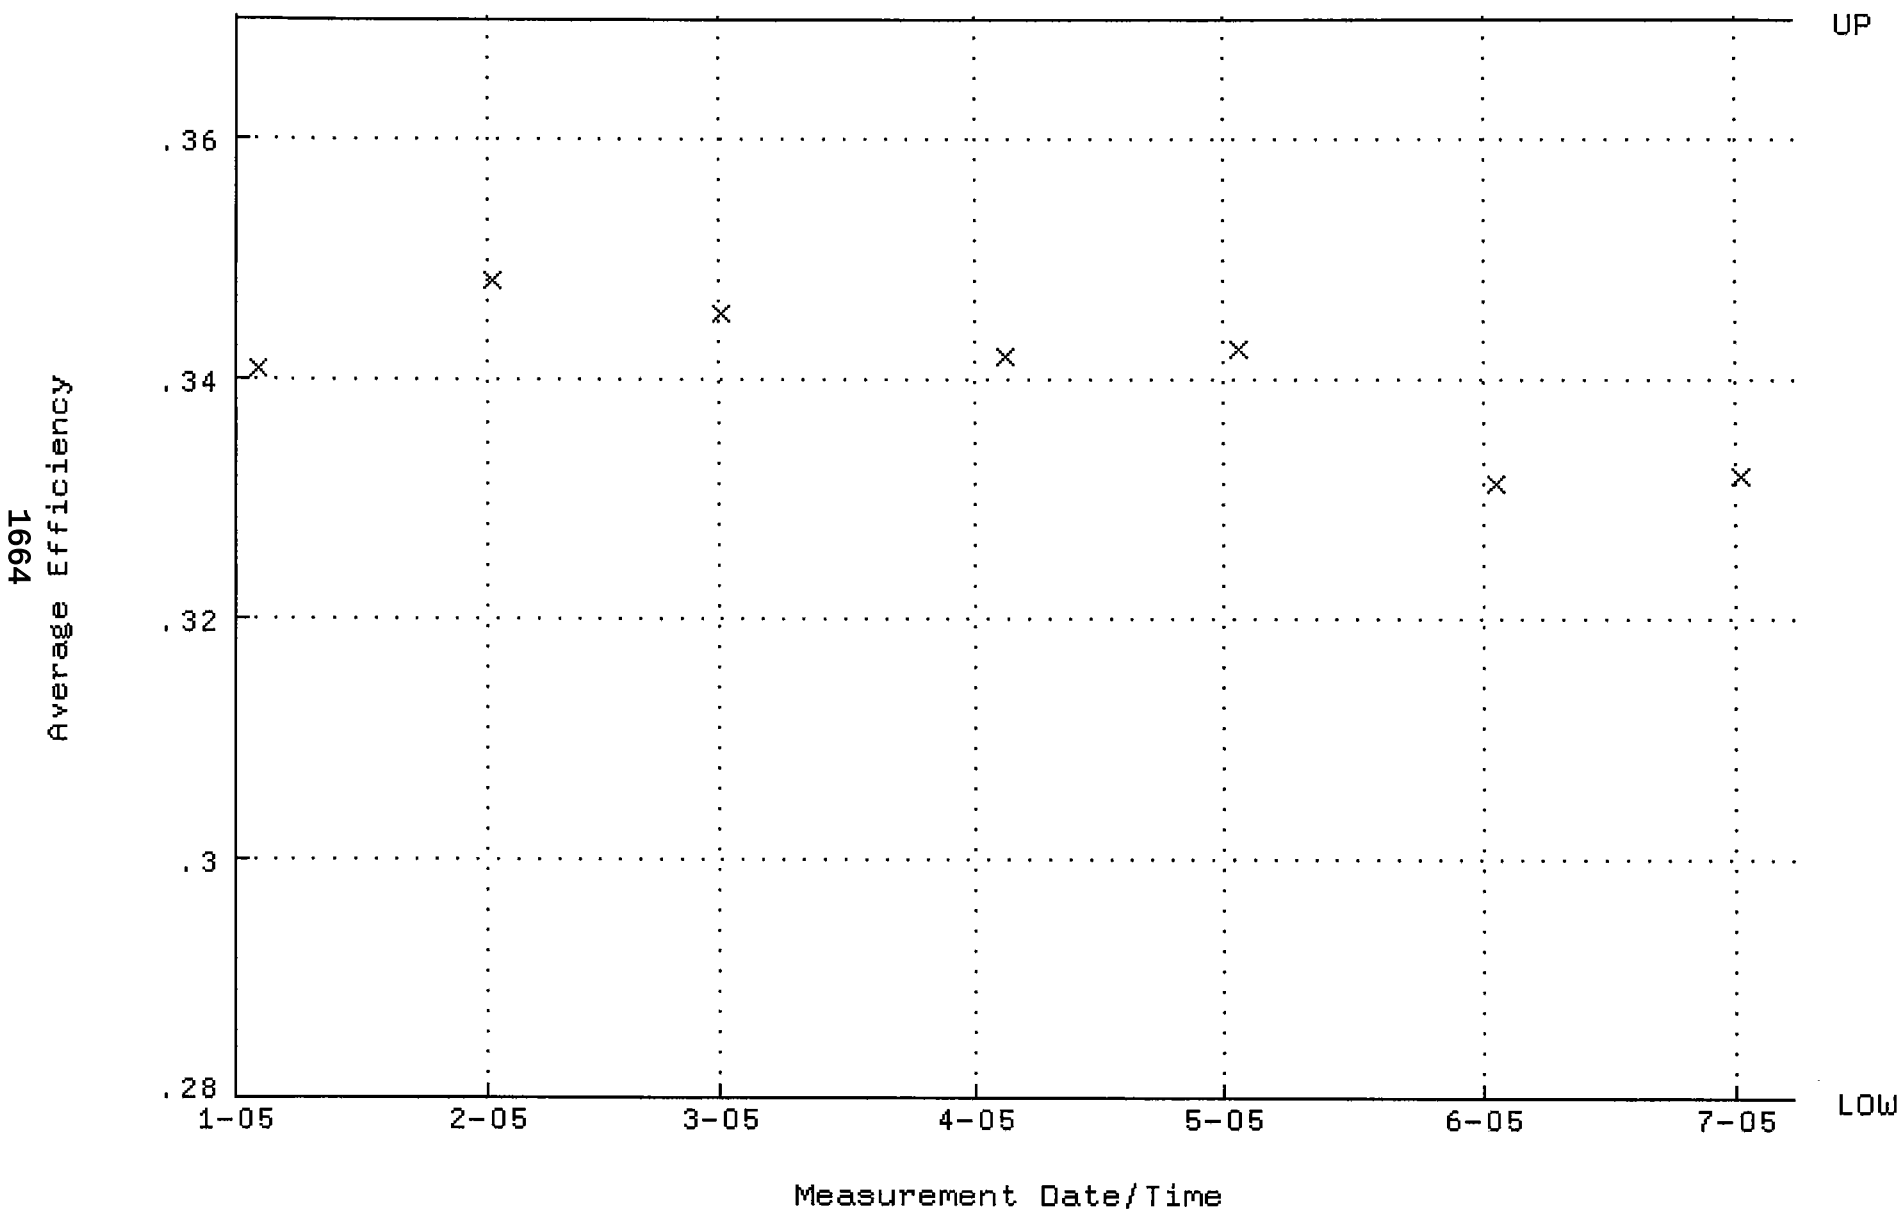
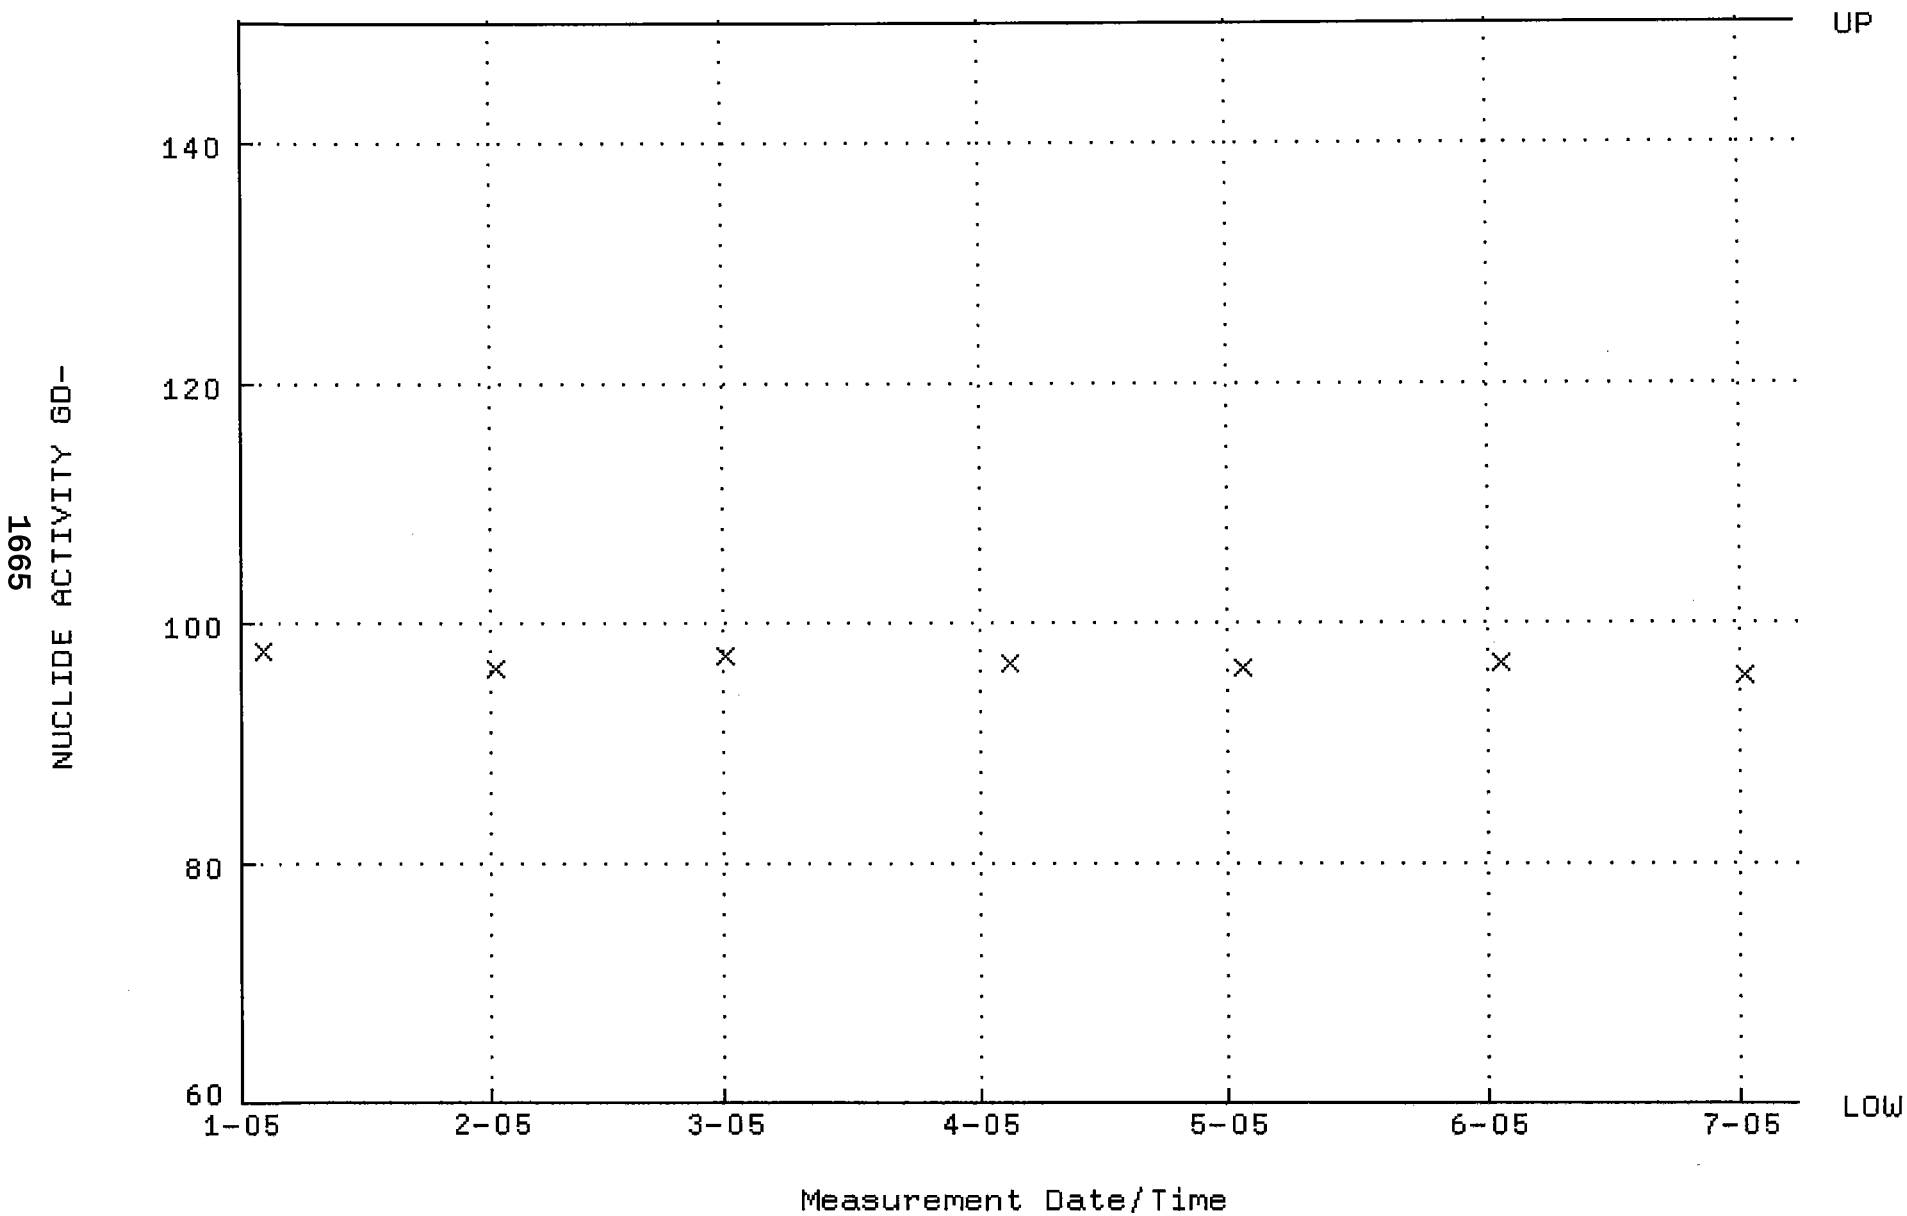
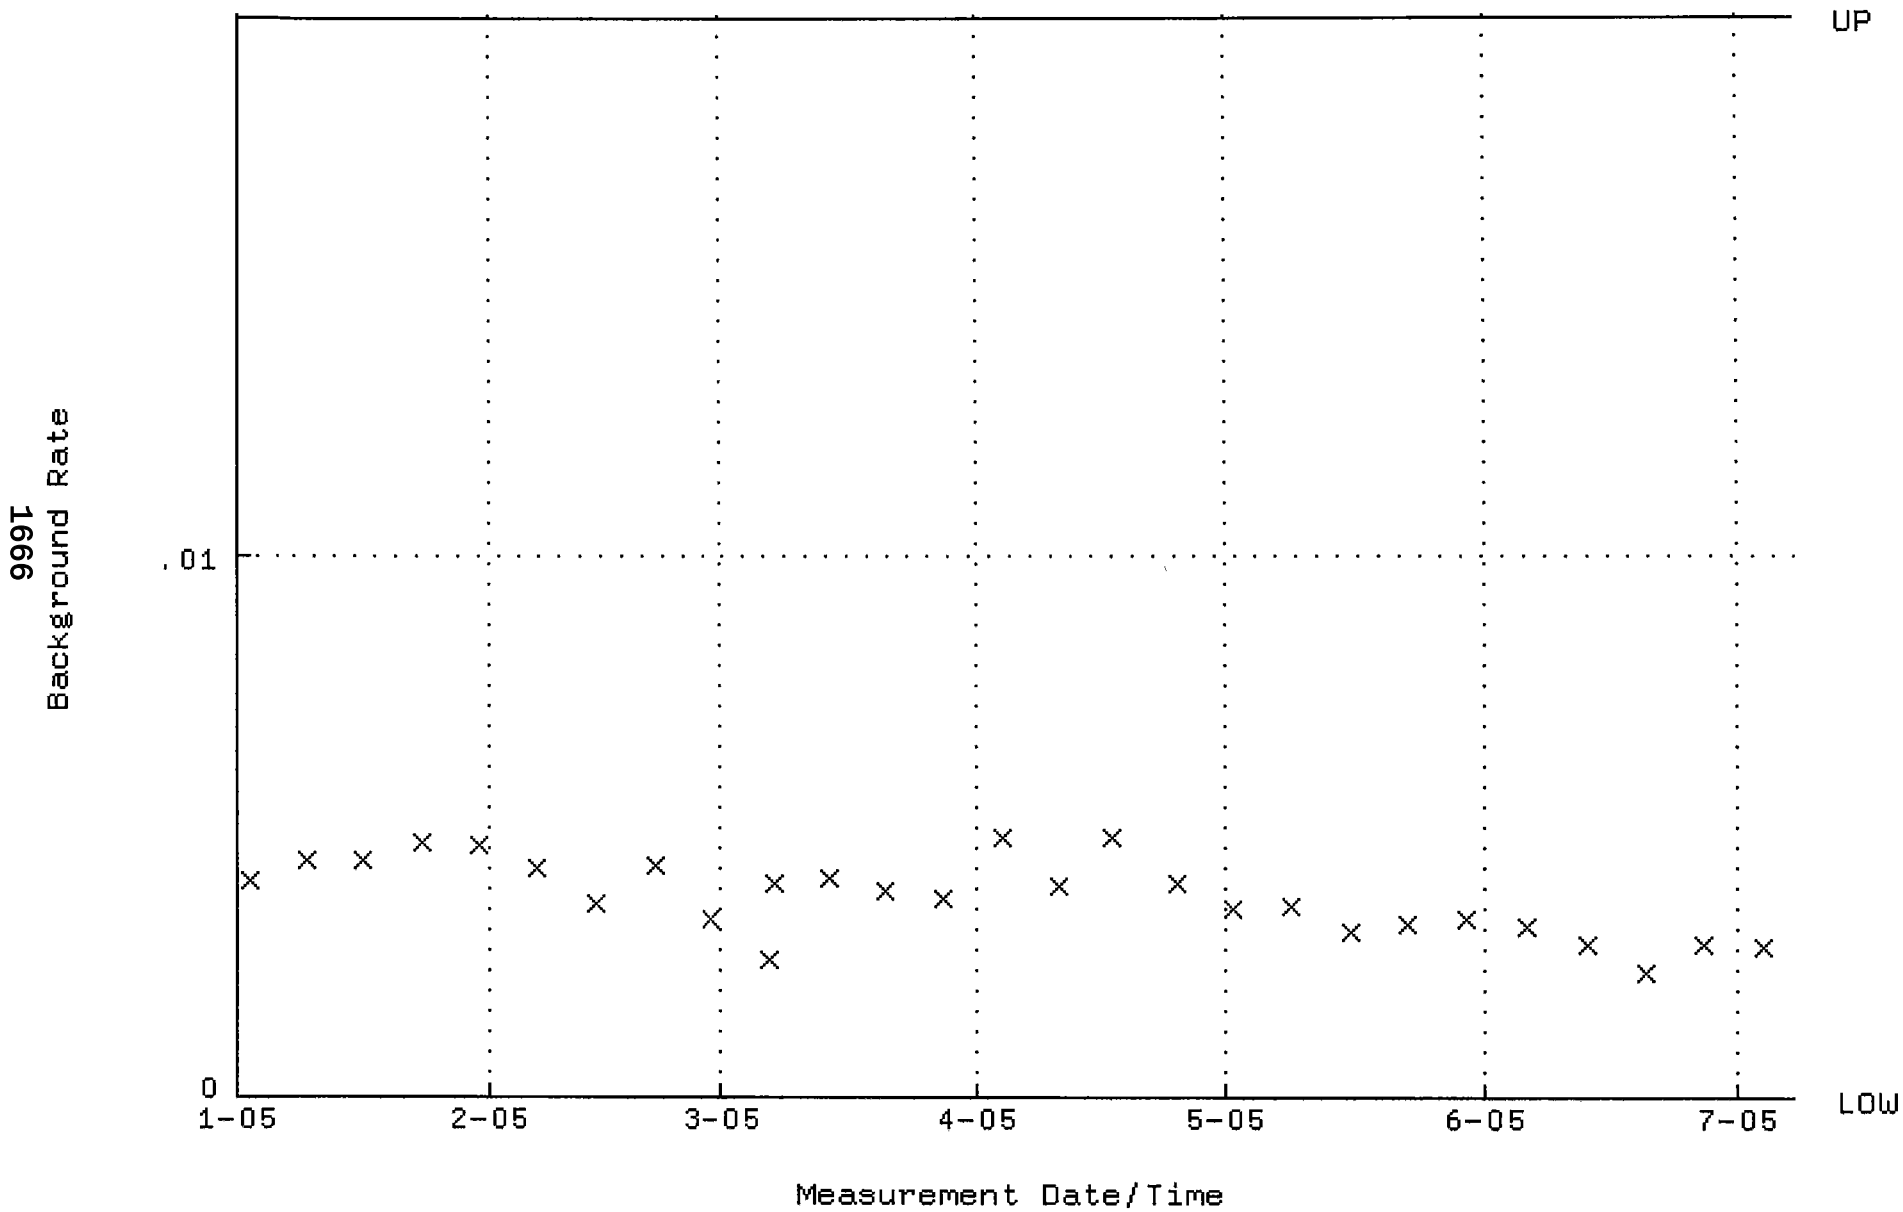
QA filename : DKA100:[ENV_ALPHA.QA.W]W020.QAF;3
Parameter Name : AVRGEFF (Average Efficiency)
Start/End Dates : 3-JAN-2005 18:00:42 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.280000 through 0.370000



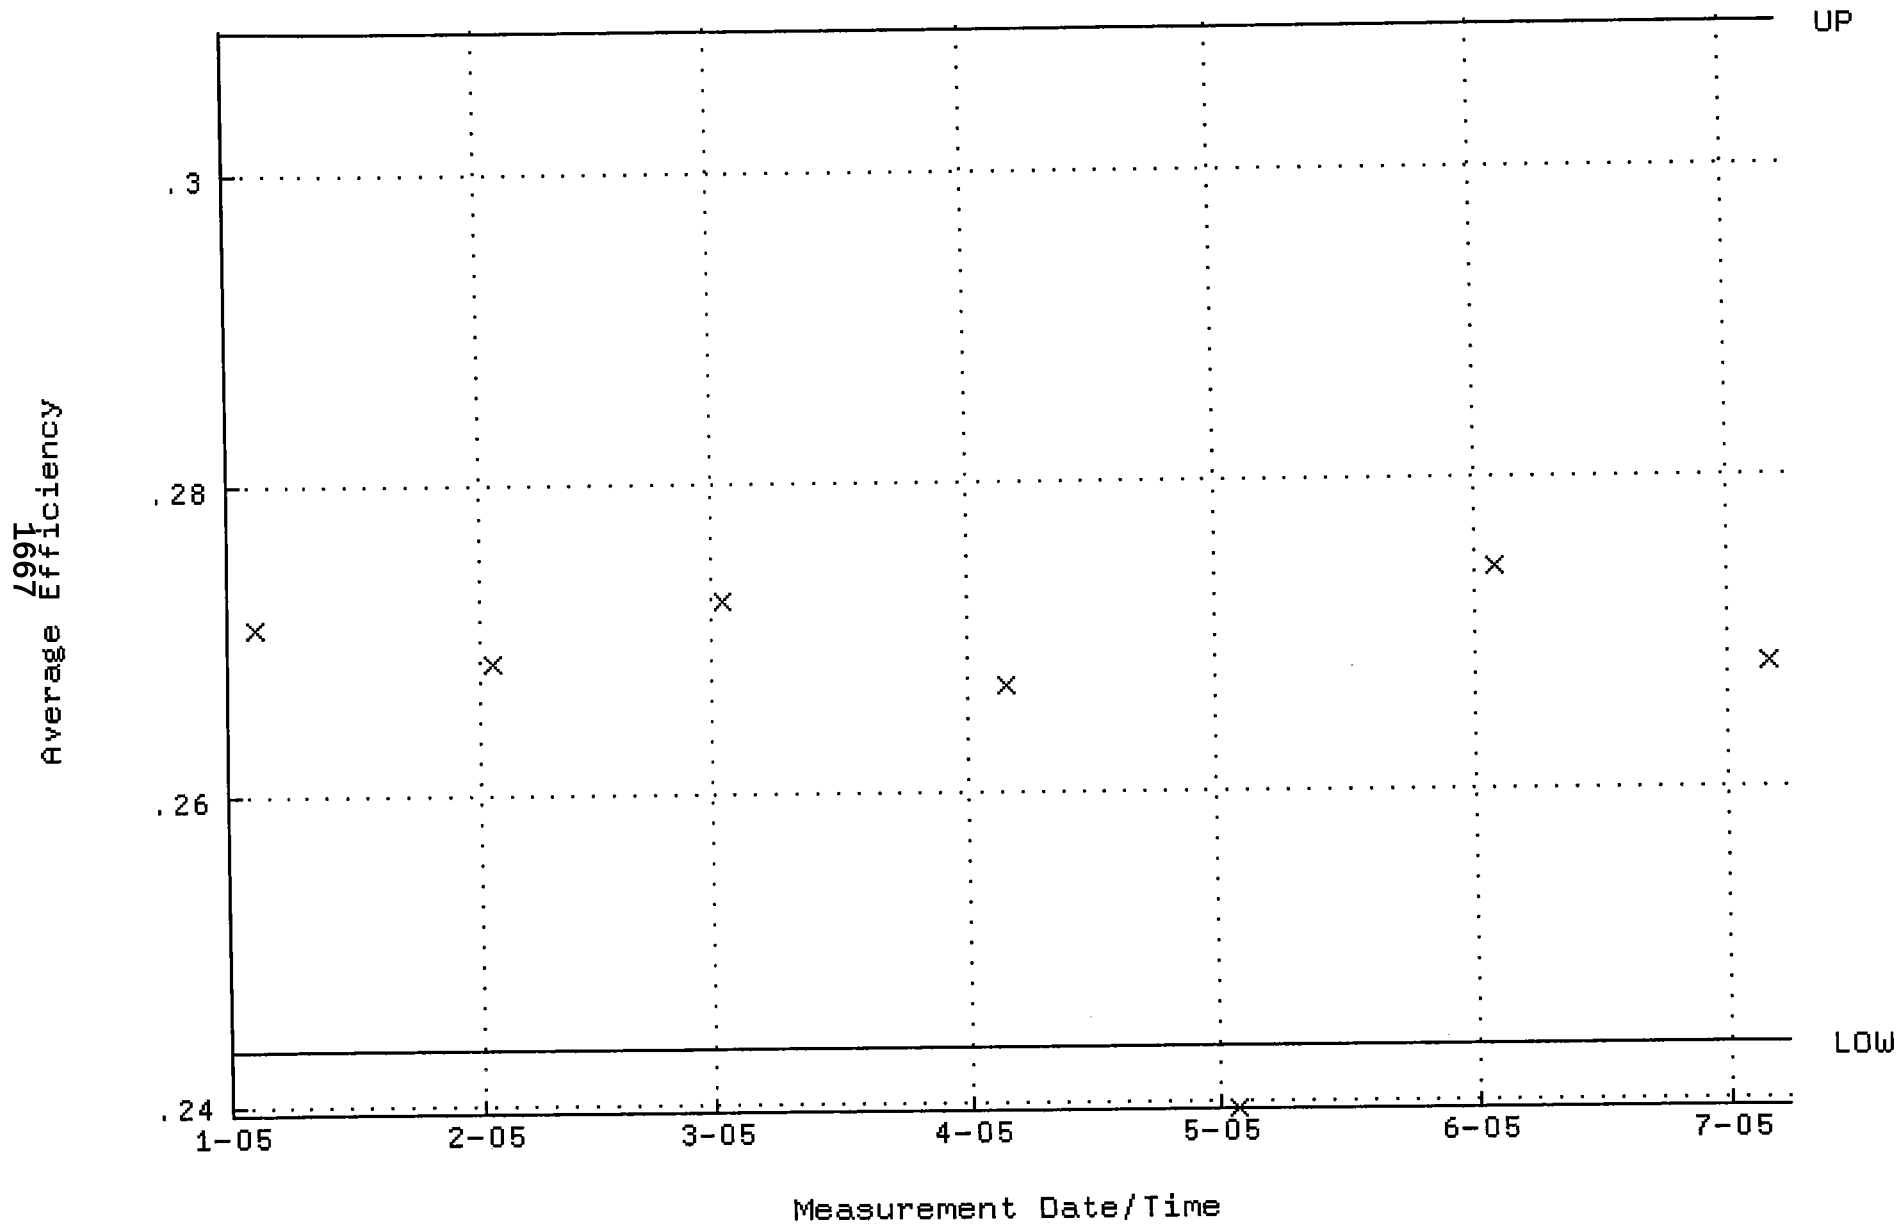
QA filename : DKA100:[ENV_ALPHA.QA.W]W020.QAF;3
Parameter Name : NLACTVTY-GD148 (NUCLIDE ACTIVITY GD-148)
Start/End Dates : 3-JAN-2005 18:00:42 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 60.0000 through 150.000



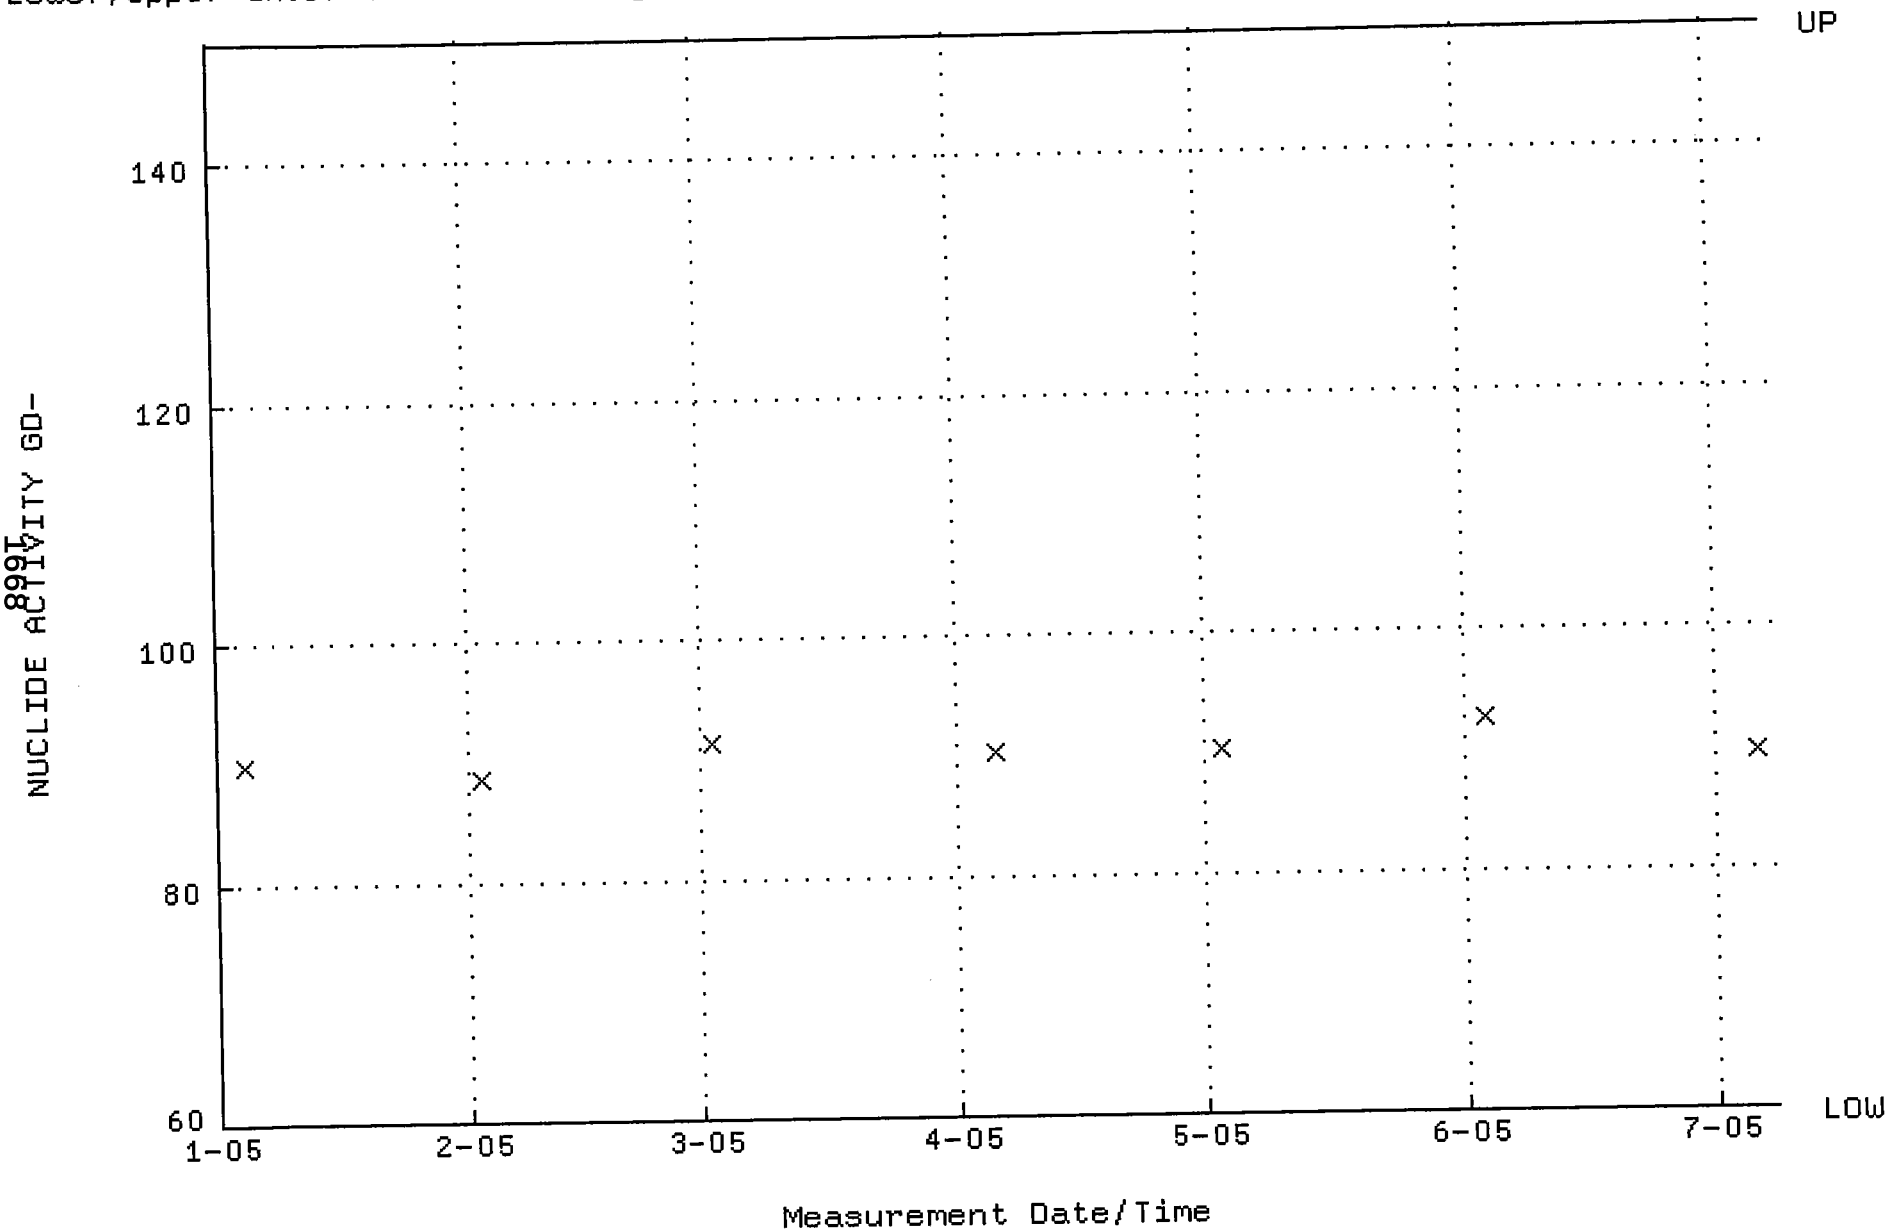
QA filename : DKA100:[ENV_ALPHA.QA.B]B020.QAF;1
Parameter Name : BACKRATE (Background Rate)
Start/End Dates : 2-JAN-2005 16:37:00 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.000000E+00 through 2.000000E-02



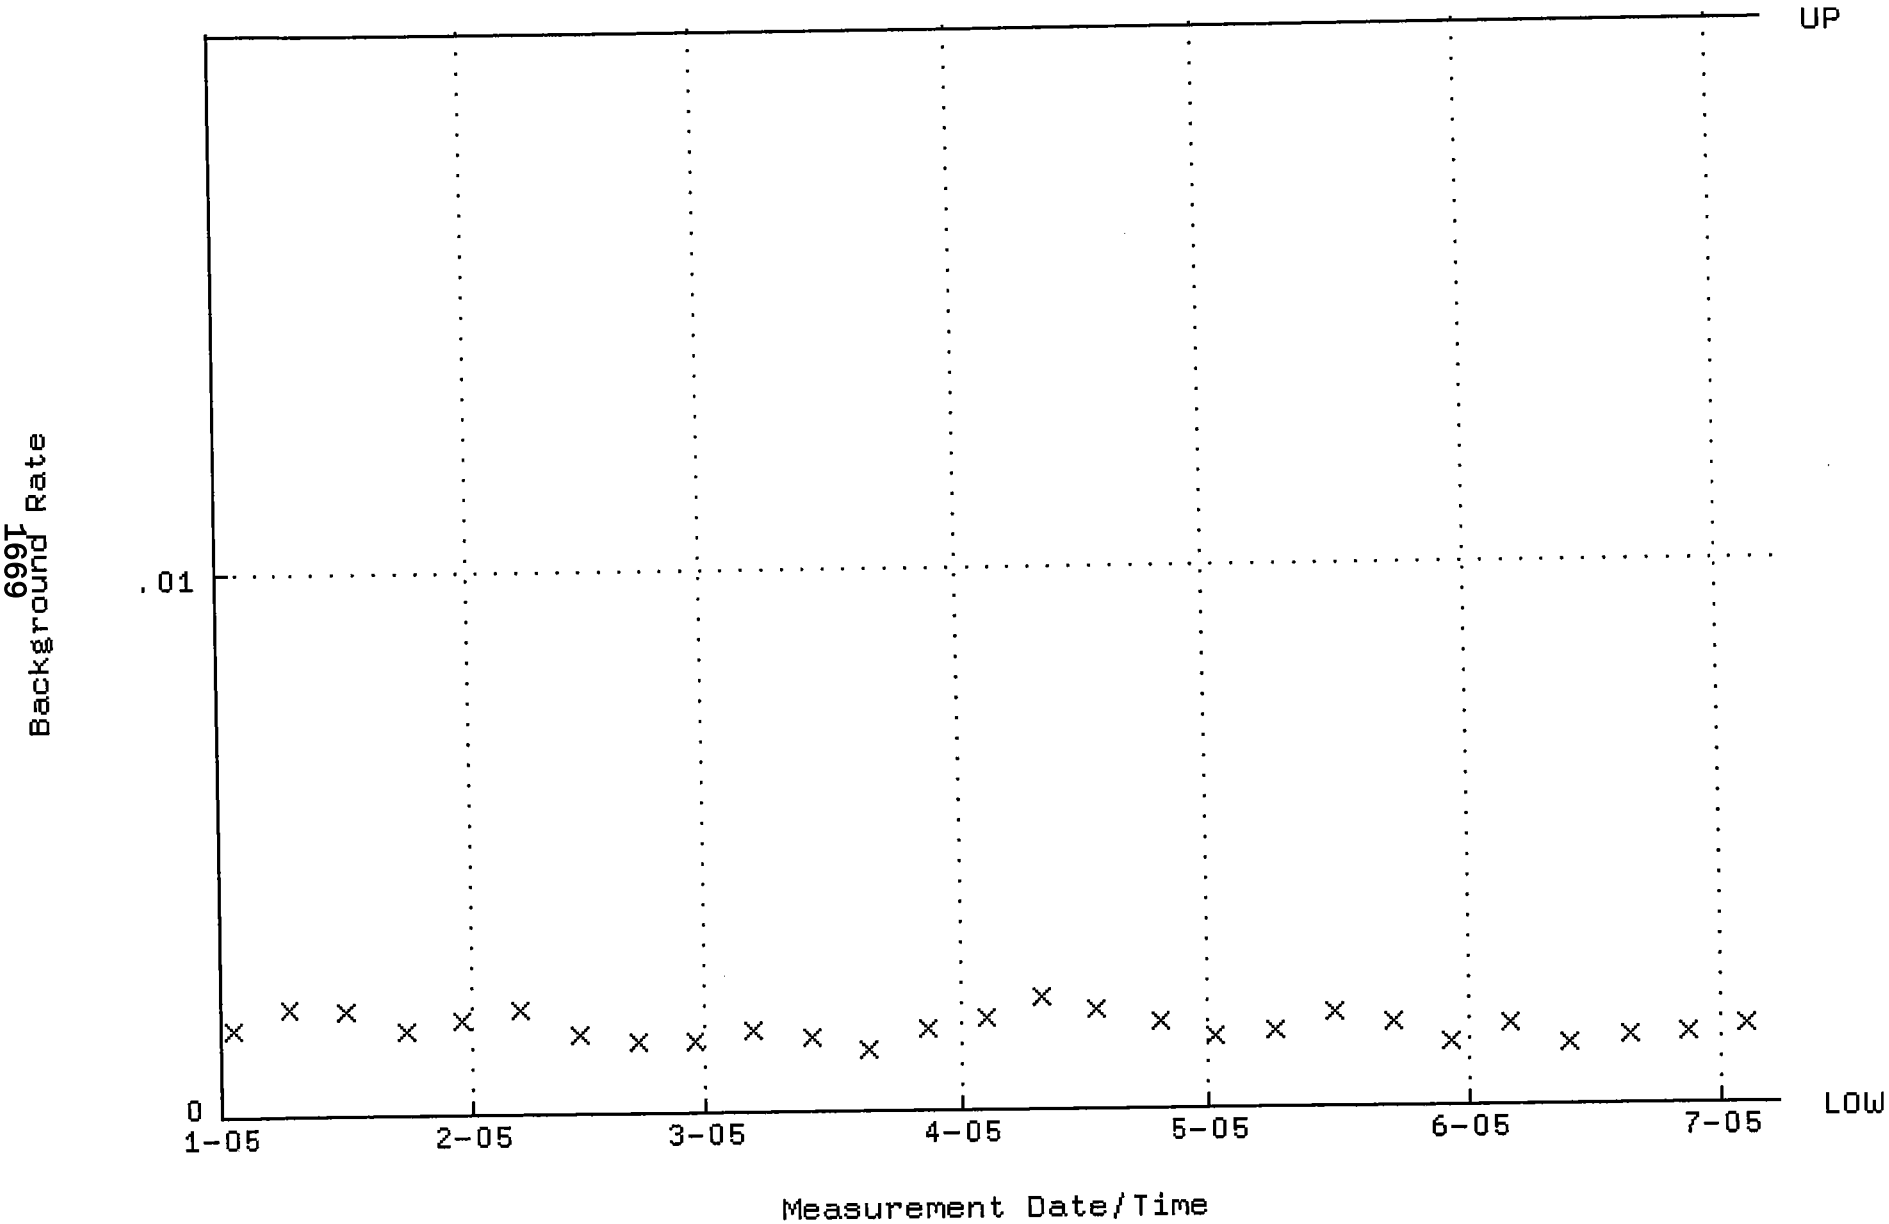
QA filename : DKA100:[ENV_ALPHA.QA.W]W061.QAF;6
Parameter Name : AVRGEFF (Average Efficiency)
Start/End Dates : 4-JAN-2005 12:11:49 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.243830 through 0.309170



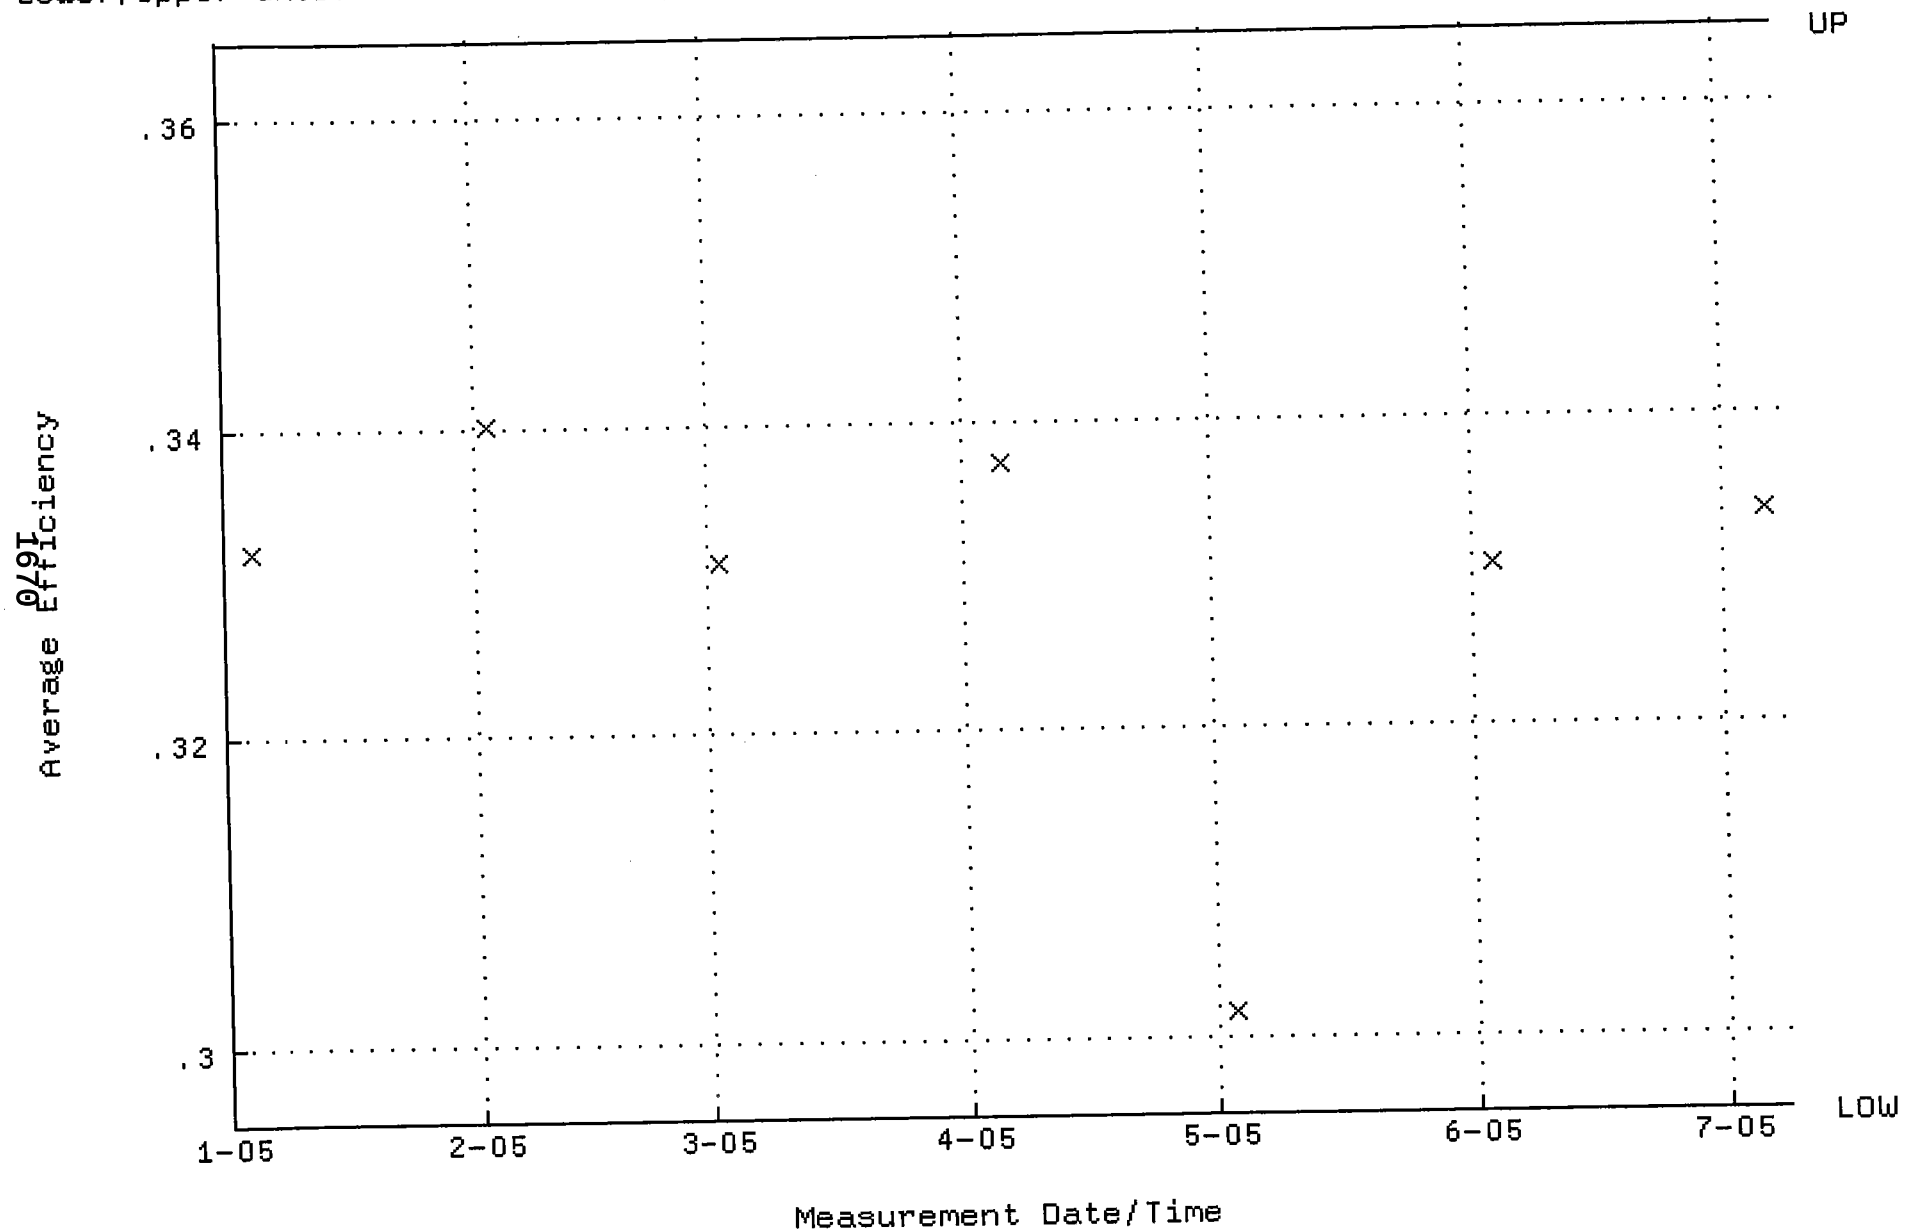
QA filename : DKA100:[ENV_ALPHA.QA.W]W061.QAF;6
Parameter Name : NLACTVTY-GD148 (NUCLIDE ACTIVITY GD-148)
Start/End Dates : 4-JAN-2005 12:11:49 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 60.0000 through 150.000



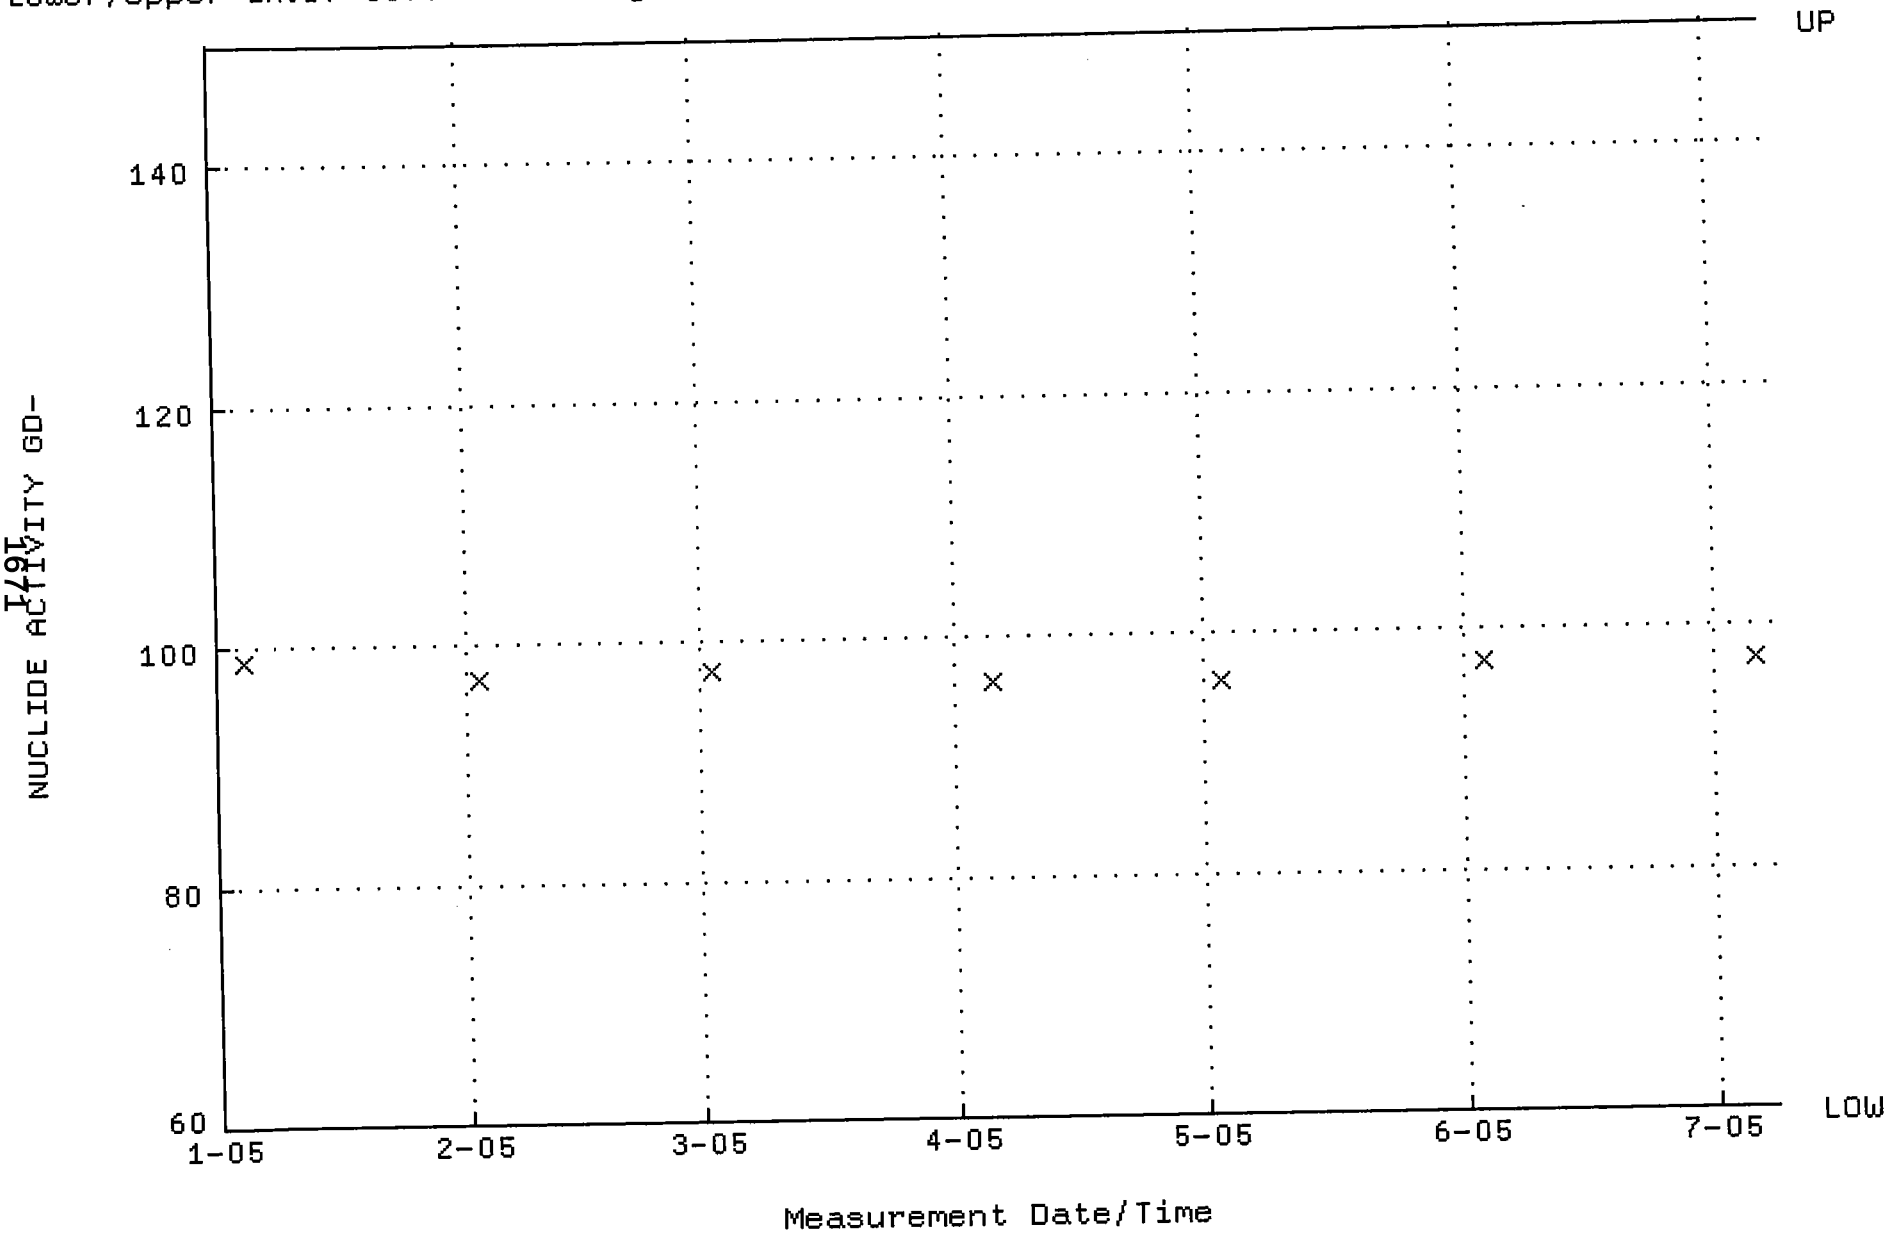
QA filename : DKA100:[ENV_ALPHA.QA.B]B061.QAF;1
Parameter Name : BACKRATE (Background Rate)
Start/End Dates : 2-JAN-2005 16:37:05 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.000000E+00 through 2.000000E-02



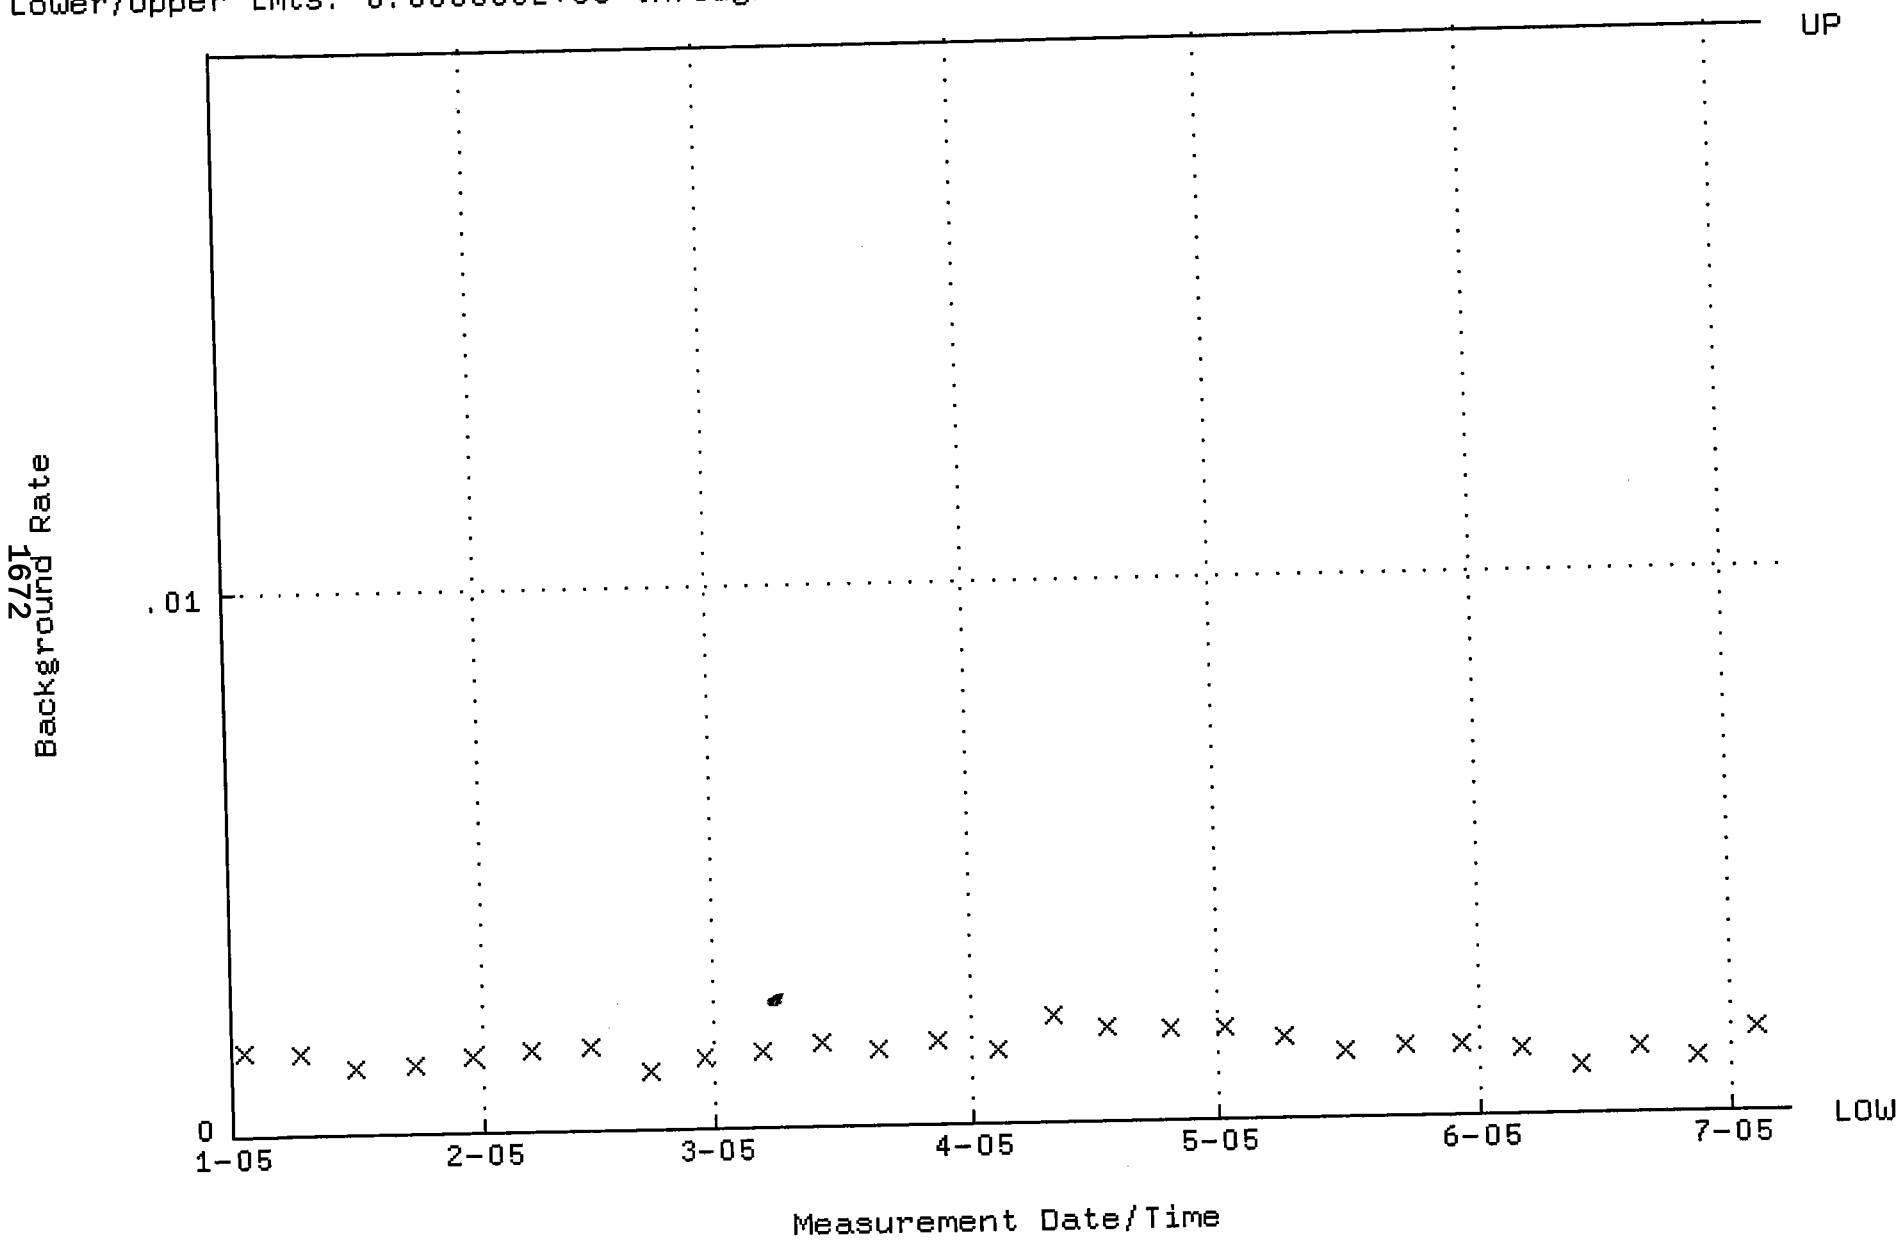
QA filename : DKA100:[ENV_ALPHA.QA.W]W062.QAF;4
Parameter Name : AVRGEFF (Average Efficiency)
Start/End Dates : 4-JAN-2005 12:11:49 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.295000 through 0.365000



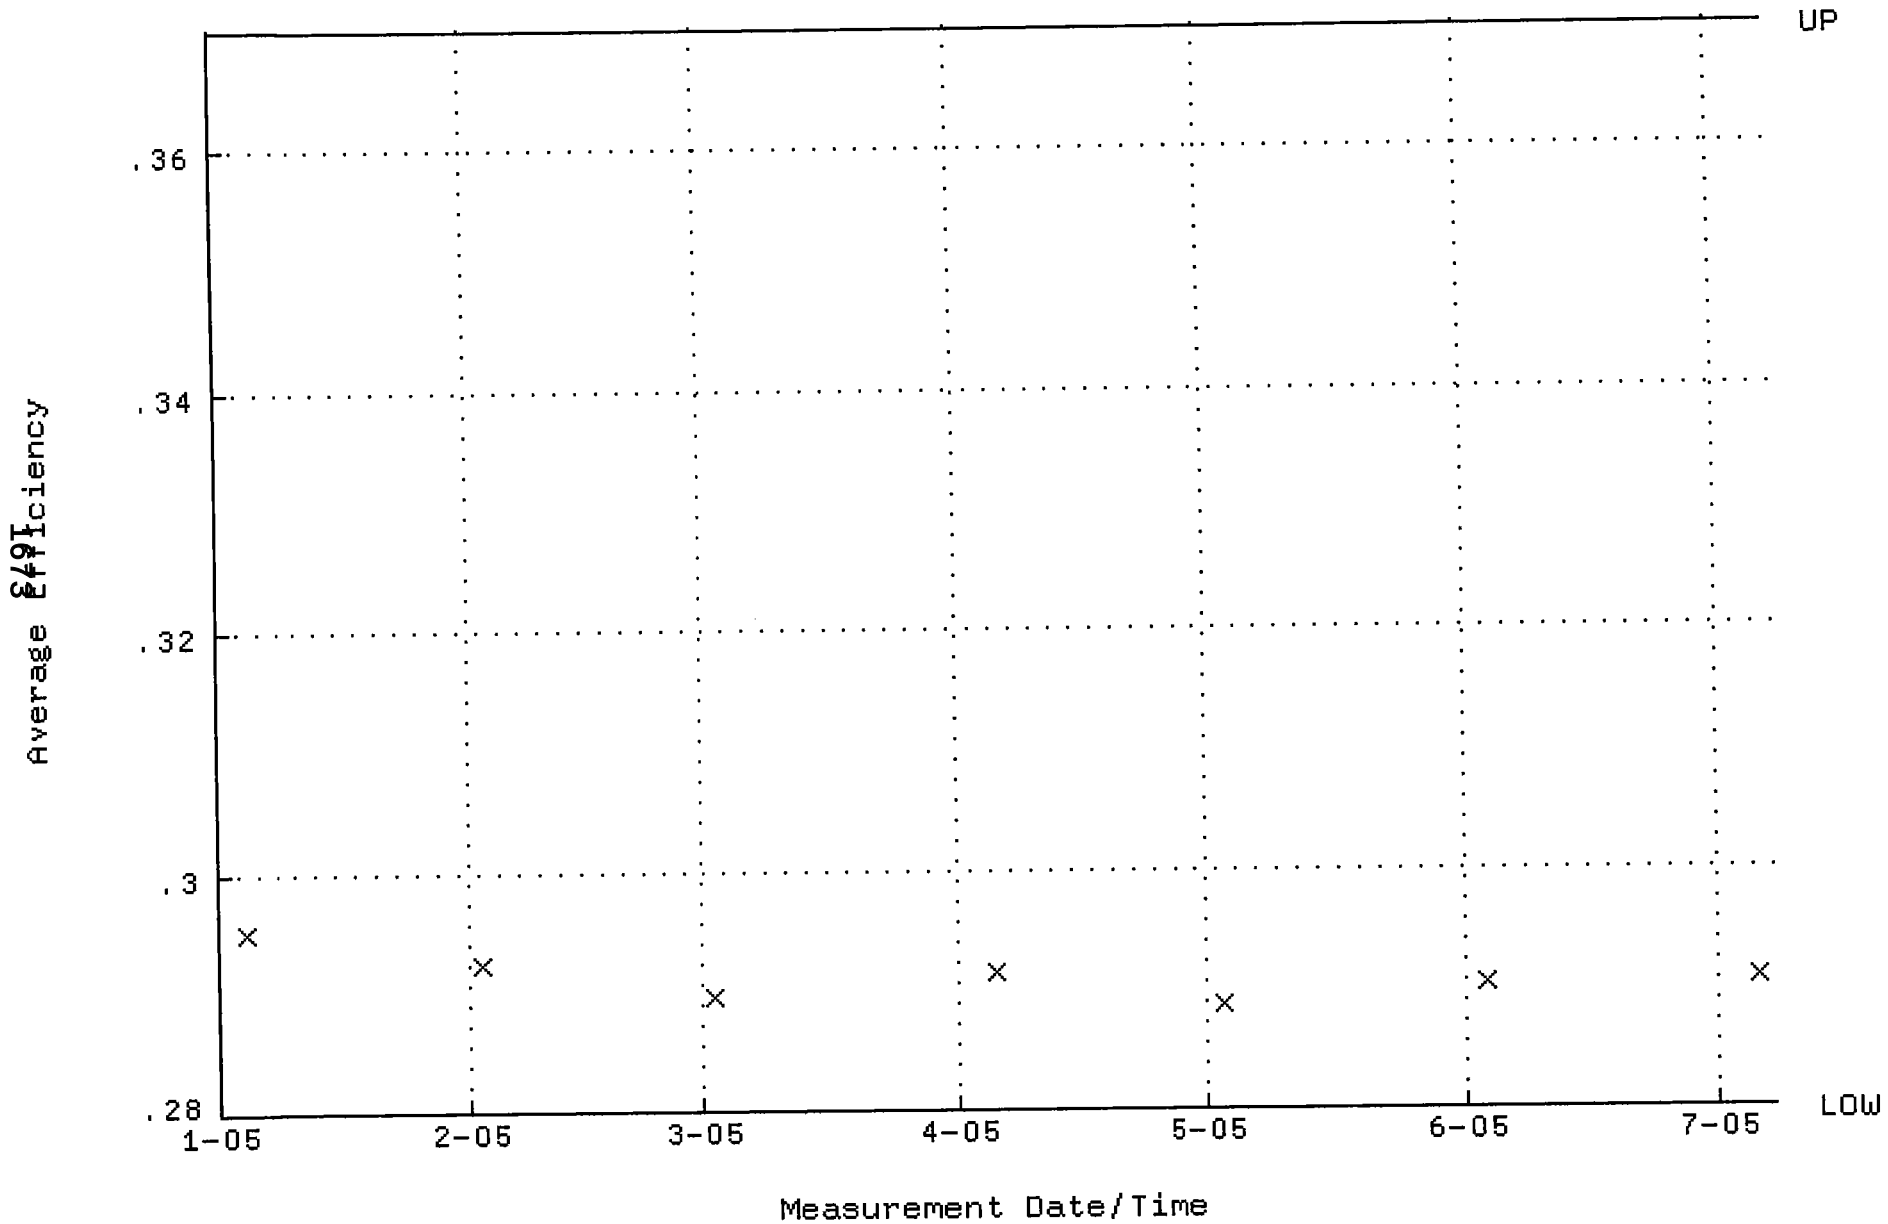
QA filename : DKA100:[ENV_ALPHA.QA.W]W062.QAF;4
Parameter Name : NLACTVTY-GD148 (NUCLIDE ACTIVITY GD-148)
Start/End Dates : 4-JAN-2005 12:11:49 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 60.0000 through 150.000



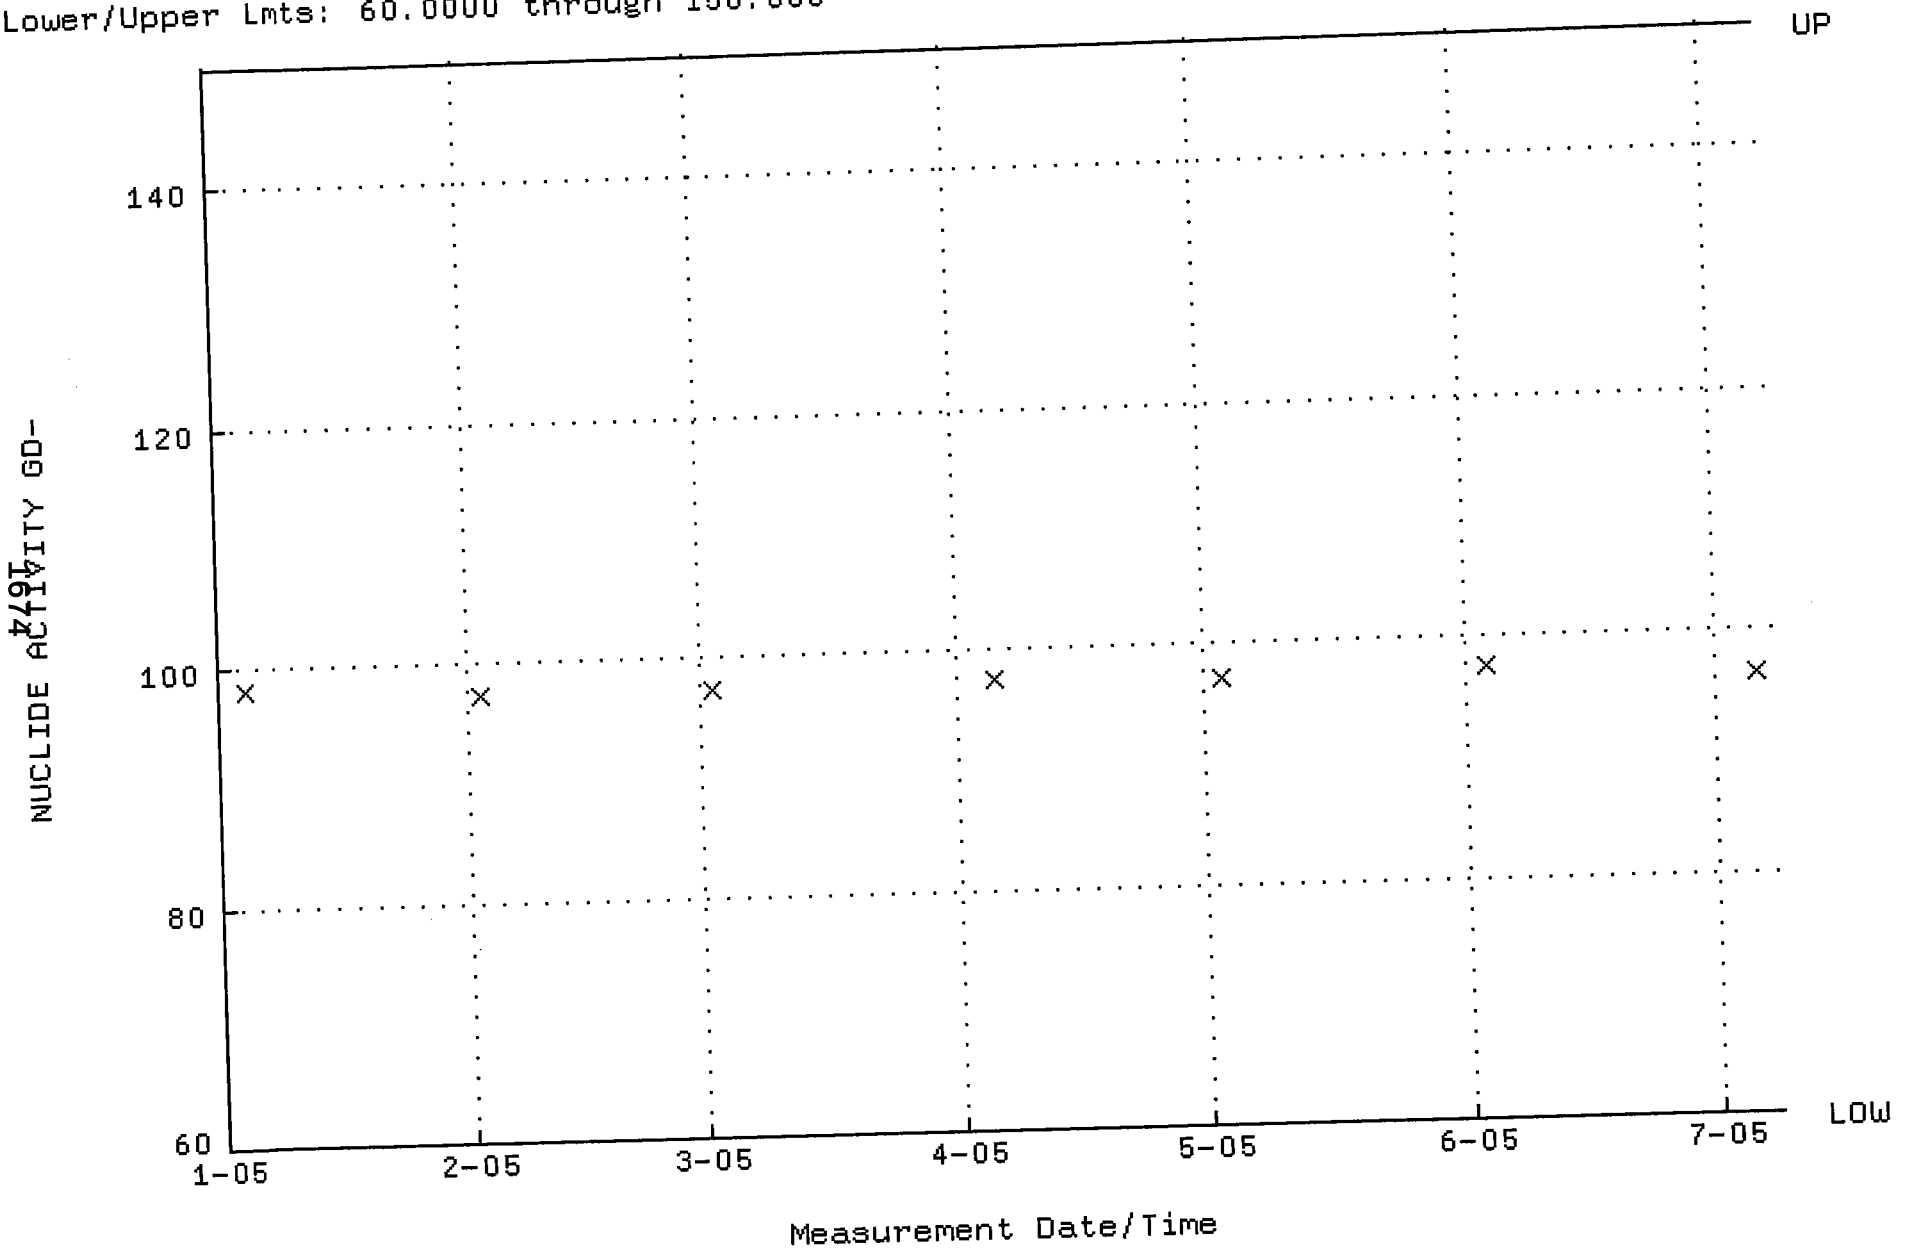
QA filename : DKA100:[ENV_ALPHA.QA.B]B062.QAF;1
Parameter Name : BACKRATE (Background Rate)
Start/End Dates : 2-JAN-2005 16:37:05 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.000000E+00 through 2.000000E-02



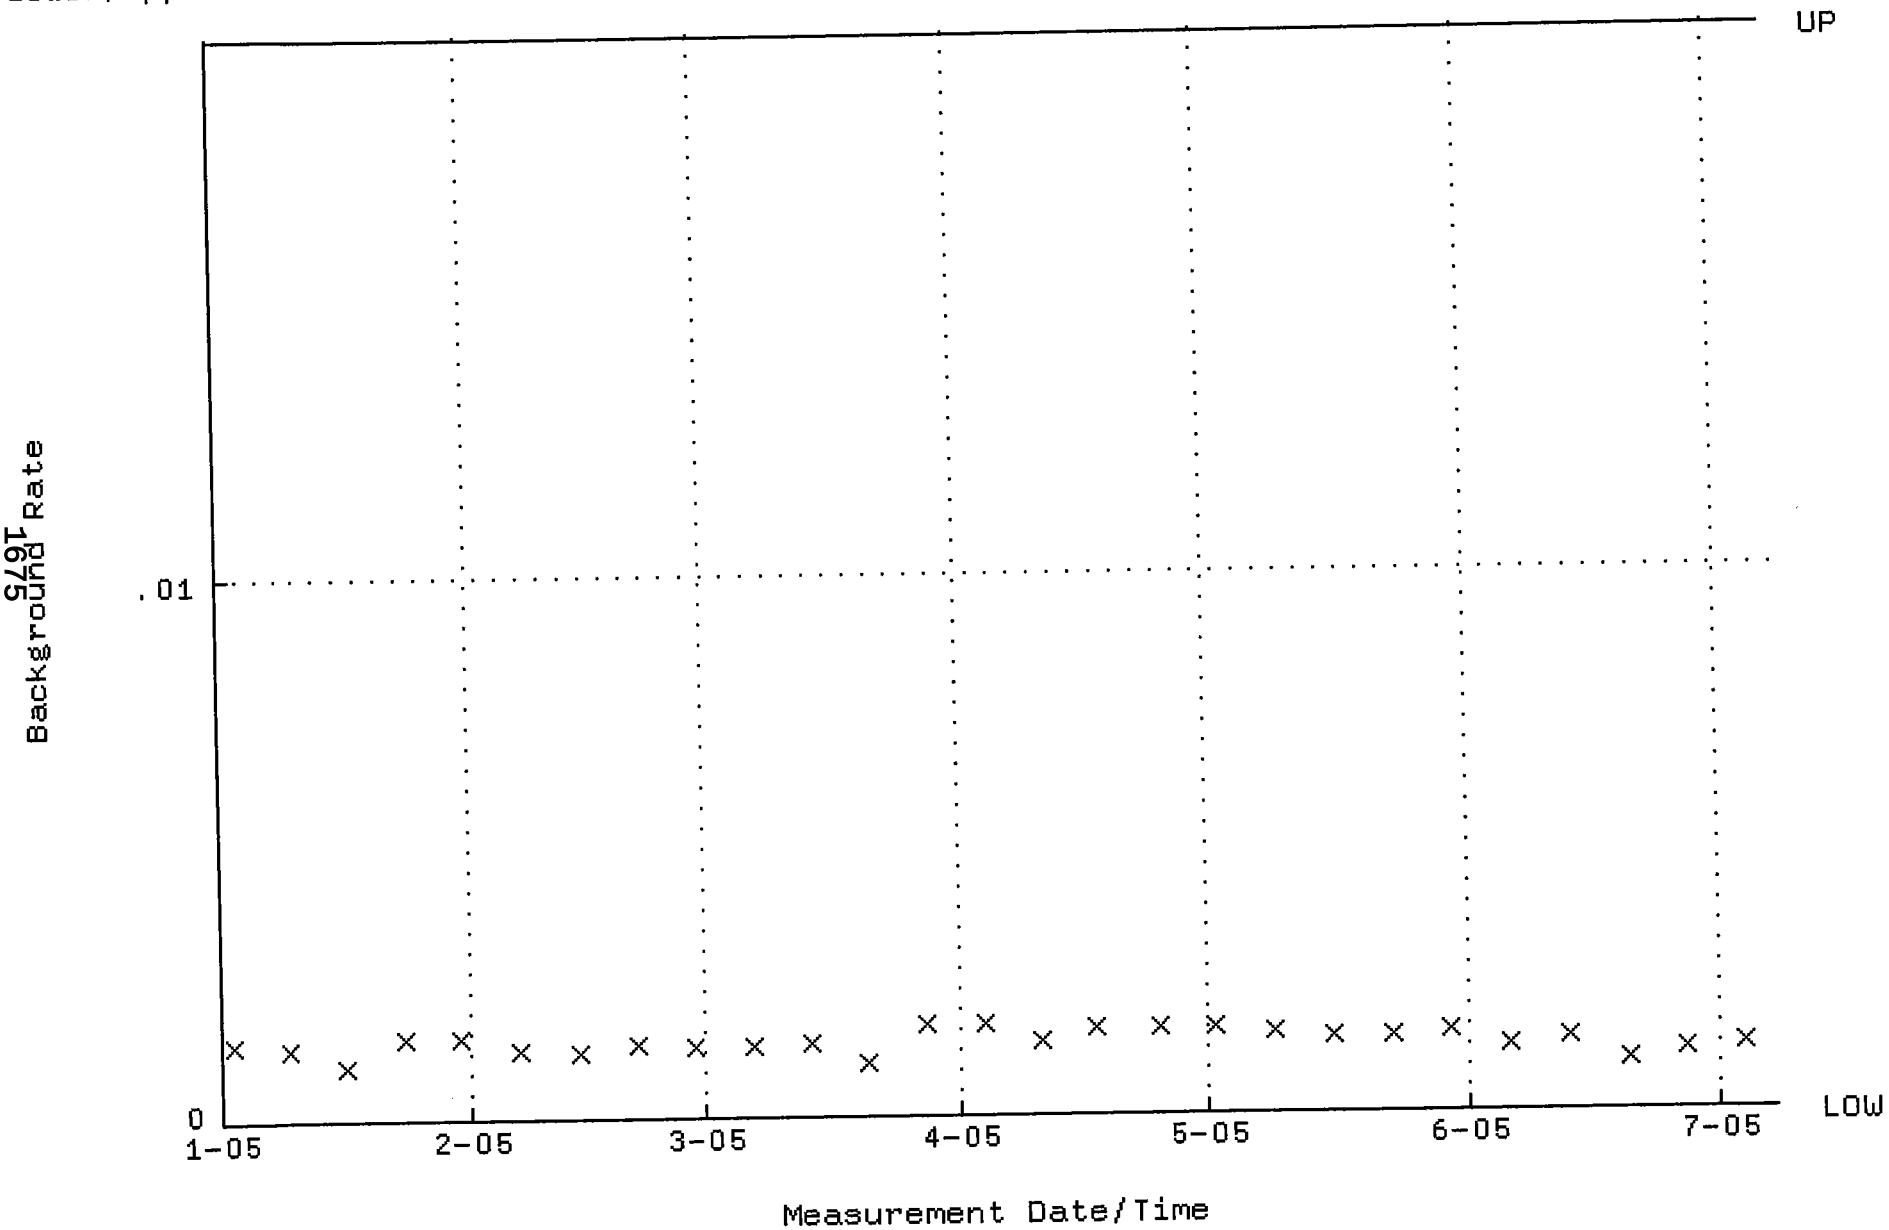
QA filename : DKA100:[ENV_ALPHA.QA.W]W064.QAF;3
Parameter Name : AVRGEFF (Average Efficiency)
Start/End Dates : 4-JAN-2005 12:11:49 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.280000 through 0.370000



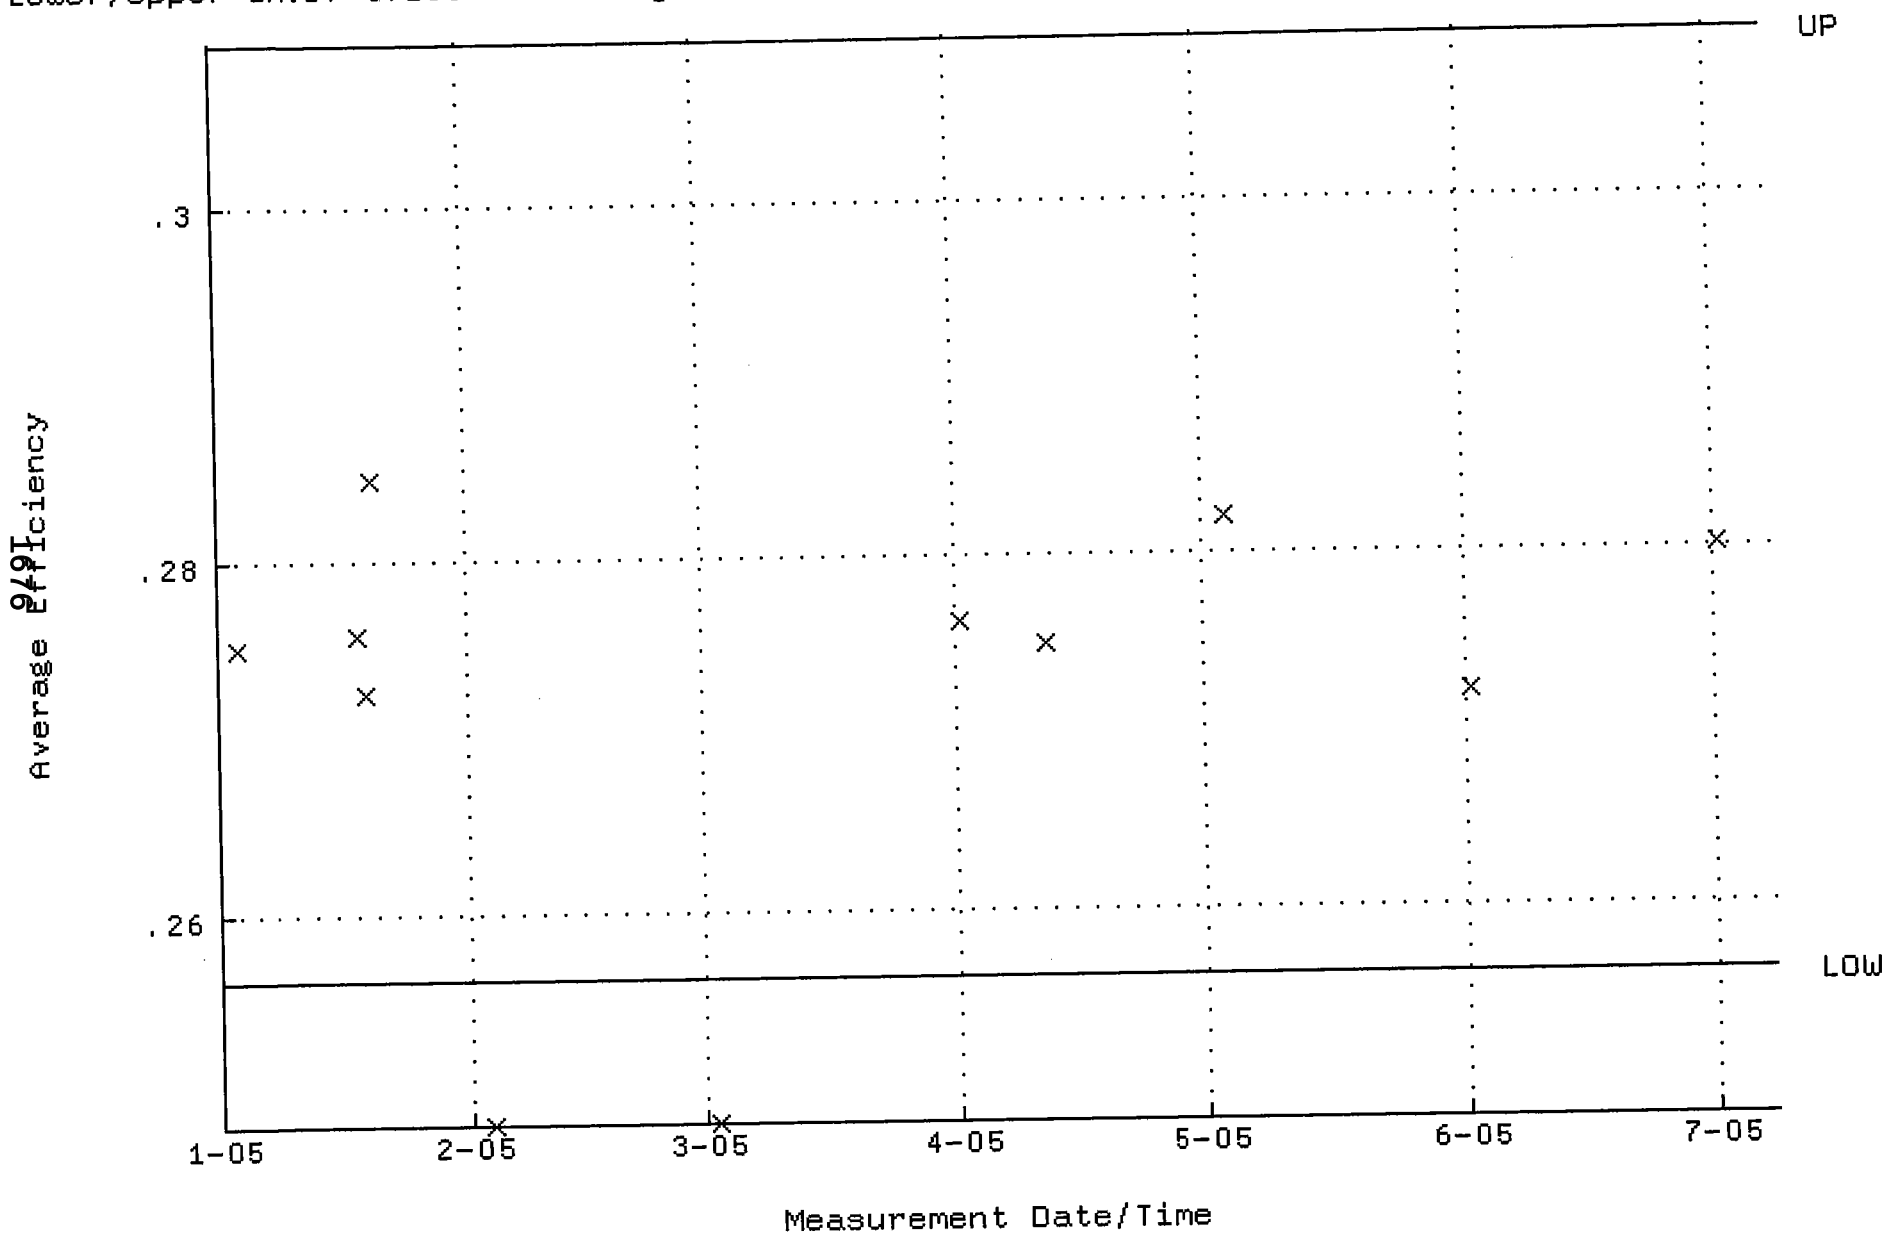
QA filename : DKA100:[ENV_ALPHA.QA.W]W064.QAF;3
Parameter Name : NLACTVTY-GD148 (NUCLIDE ACTIVITY GD-148)
Start/End Dates : 4-JAN-2005 12:11:49 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 60.0000 through 150.000



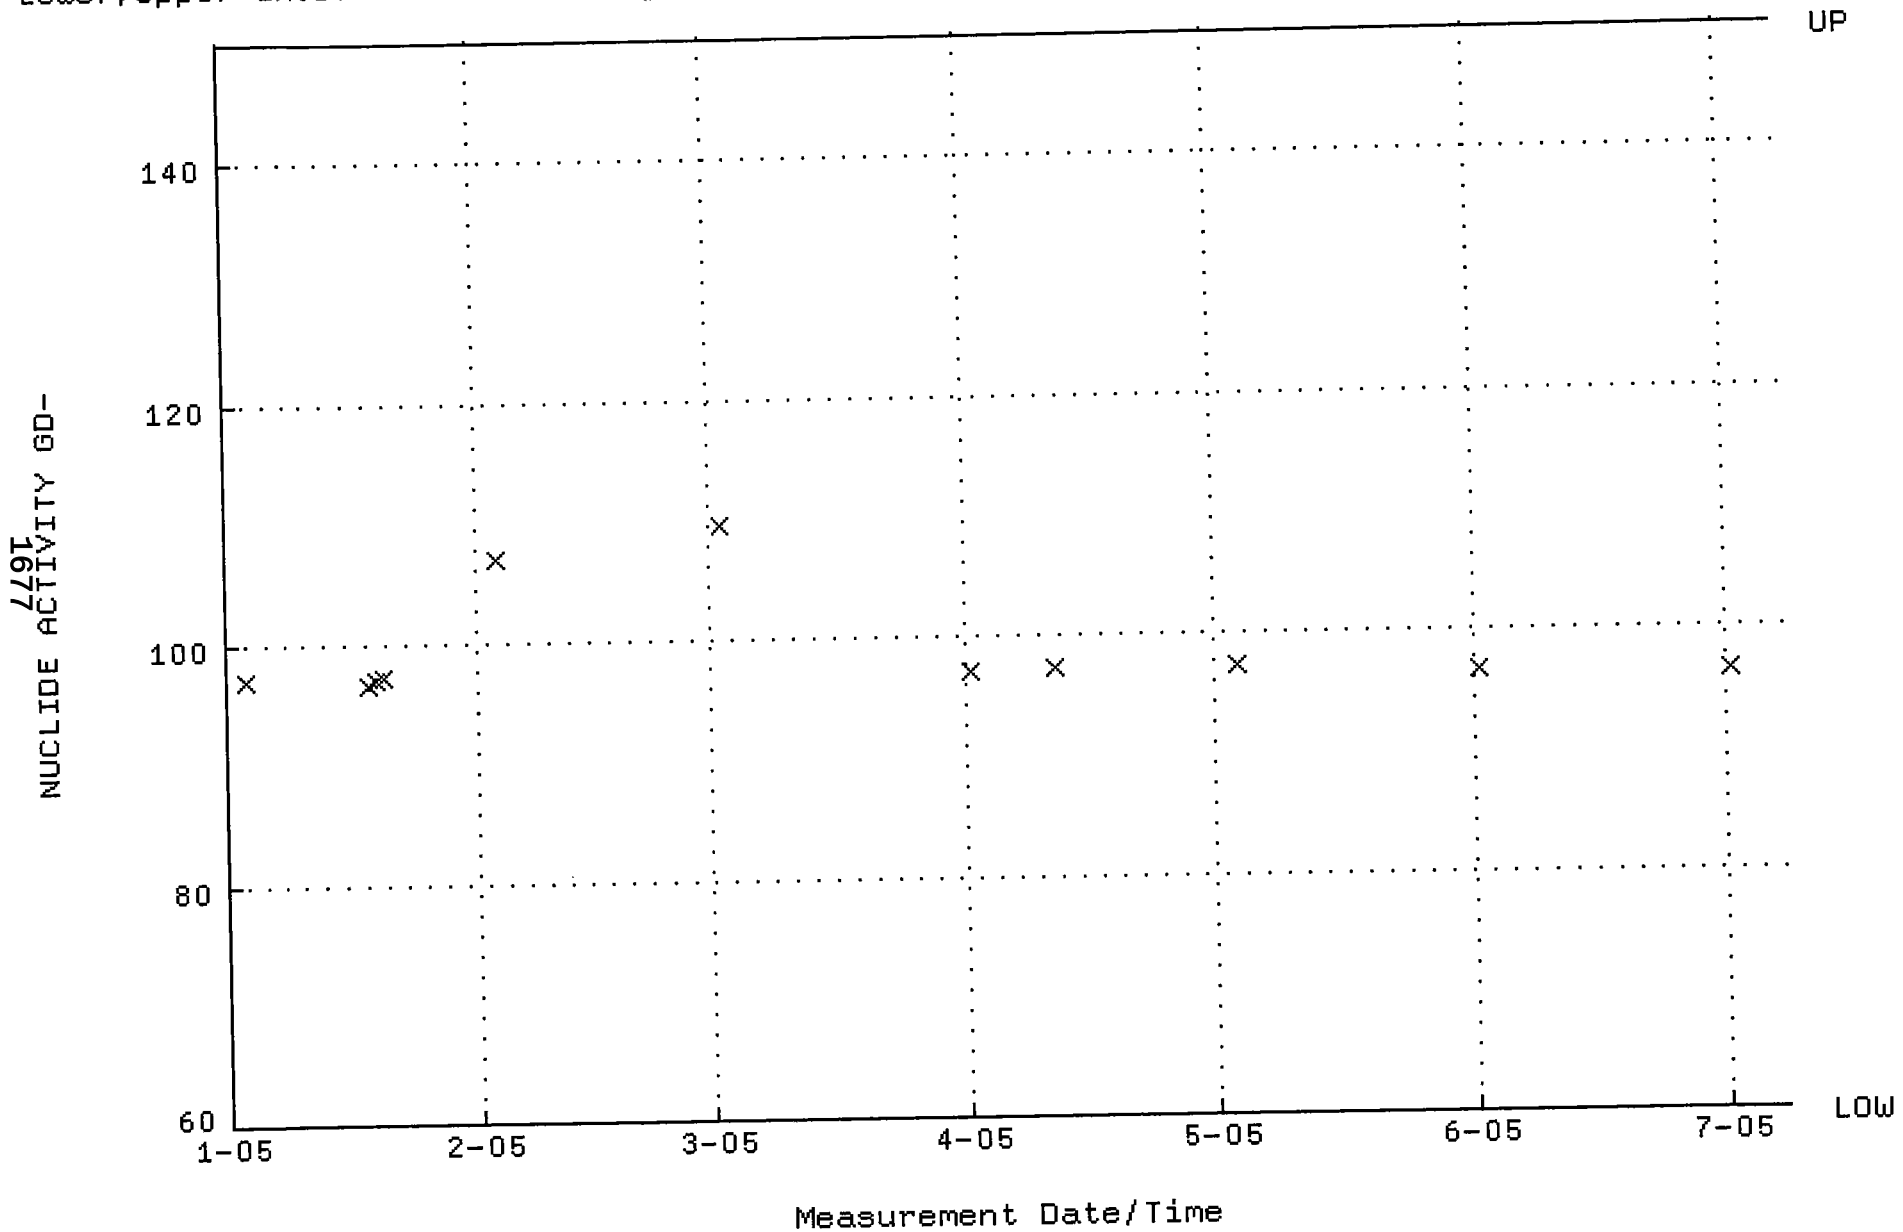
QA filename : DKA100:[ENV_ALPHA.QA.B]B064.QAF;1
Parameter Name : BACKRATE (Background Rate)
Start/End Dates : 2-JAN-2005 16:37:05 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.000000E+00 through 2.000000E-02



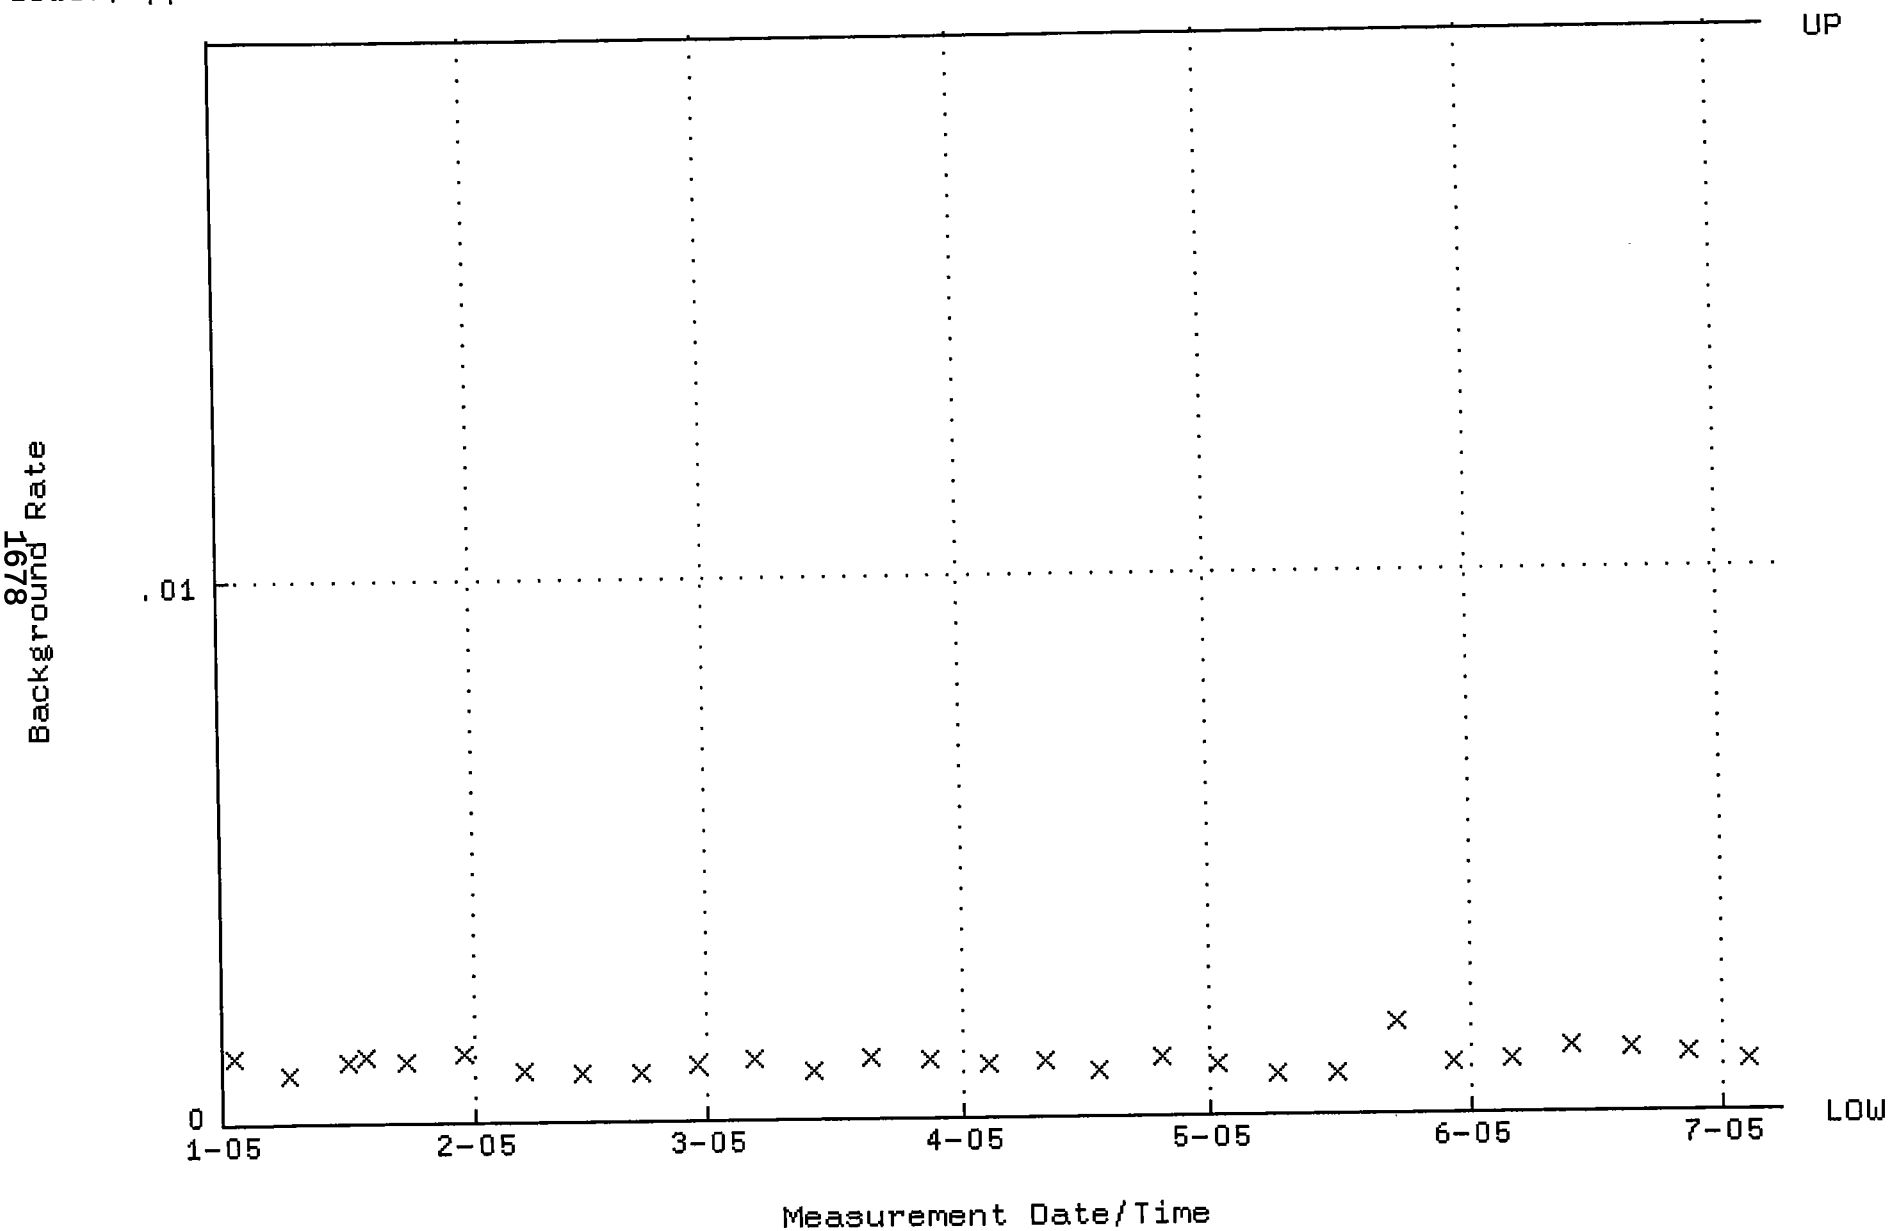
QA filename : DKA100:[ENV_ALPHA.QA.W]W065.QAF;2
Parameter Name : AVRGEFF (Average Efficiency)
Start/End Dates : 3-JAN-2005 11:31:21 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.256334 through 0.309266



QA filename : DKA100:[ENV_ALPHA.QA.W]W065.QAF;2
Parameter Name : NLACTVTY-GD148 (NUCLIDE ACTIVITY GD-148)
Start/End Dates : 3-JAN-2005 11:31:21 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 60.0000 through 150.000



QA filename : DKA100:[ENV_ALPHA.QA.B]B065.QAF;1
Parameter Name : BACKRATE (Background Rate)
Start/End Dates : 2-JAN-2005 16:37:07 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.000000E+00 through 2.000000E-02



QA filename : DKA100:[ENV_ALPHA.QA.W]W069.QAF;2
Parameter Name : AVRGEFF (Average Efficiency)
Start/End Dates : 3-JAN-2005 11:31:21 through 7-JUL-2005 12:00:00
Lower/Upper Lmts: 0.280000 through 0.370000

CERTIFICATE OF CALIBRATION

Standard Radionuclide Source

69416-278

Tc-99 5 mL Liquid in Flame Sealed Vial

This standard radionuclide source was prepared gravimetrically from a calibrated master solution. The master solution was calibrated by the Department Des Applications Et De La Metrologie Des Rayonnements Ionisants (DAMRI), Paris, France, as Number 25430.

ANALYTICS maintains traceability to the National Institute of Standards and Technology through Measurements Assurance Programs as described in USNRC Reg. Guide 4.15, Revision 1.

Radionuclide purity and calibration were checked by germanium gamma-ray spectrometry and liquid scintillation counting. The nuclear decay rate and assay date for this source are given below.

ISOTOPE:	Tc-99
ACTIVITY (dps):	3.660 E4
HALF-LIFE:	2.111 E5 years
CALIBRATION DATE:	October 28, 2004 12:00 EST
RELATIVE EXPANDED UNCERTAINTY (k=2):	2.2%

Impurities: γ-impurities <0.1%

5.00994 grams 0.3M NH_4OH with 225 µg/g $TcO_4(-I)$.

Two sigma =	99.24358664						
10 % of Mean =	260.6349399						
Rule 2 (Pass/Fail)	**Pass**						

Verification Rules

Rule 1 = The certificate value (NOT including any uncertainty) shall lie within the 95% confidence interval determined from the mean and two sigma standard deviation of the three measurements
Rule 2 = The two sigma value used for the 95% confidence interval shall not exceed 10% of the mean value of the three verification measurements.

The analyst prepared three standard verification sources for Tc-99 source 0718-B by transferring portions of the standard into tared glass liquid scintillation vials. Ten mL of Ready Gel liquid scintillation cocktail was added to each vial and the vials were shaken to mix. A Blank vial was prepared in a similar fashion using 1 mL of DI water and 10 mL of Ready Gel cocktail. The standard verification vials and Background source were dark adapted for two hours and counted on LSC Yellow (Wallac) using Protocol 14 for Tc-99 source standard verification. The Tc-99 efficiency calibration which was used for verification calculations was performed on 2/4/05 using source 0247-A
(Tc-99). Calibration data is recorded in this logbook under Tc-99 0247-A. Each verification source calculation was performed as follows:

Source dpm/g = (A - B)/(C)(D)
where:
A = Ver. source cpm,
B = BKG cpm,
C = System efficiency, (cpm/dpm), and
D = mass used for standard verification.

Certificate of calibration of standardized tritium labeled water

Description

Radionuclide: TRITIUM (HYDROGEN-3) Product code: TRY·64

Chemical form: water Batch: 111

Measurement

Reference time: 1200 GMT on 1 March 1996

Radioactive concentration of tritium: 488.0 kilobecquerels per gram of water

which is equivalent to: 13.19 microcuries per gram of water

or: 2.93×10^7 disintegrations per minute per gram of water

Method of Measurement
This reference material was calibrated by direct comparison with a standard of tritium-labelled water obtained from the National Institute of Standards and Technology, USA.

Accuracy

The OVERALL UNCERTAINTY of the result quoted above is estimated to be less than ±2.5%

This estimate of uncertainty was calculated in accordance with the recommendations of the International Commission on Radiation Units and Measurements (ICRU Report 12). The limits of uncertainty were taken as the arithmetic sum of the uncertainty due to random variations, calculated at the 99·7% confidence level, and the estimated systematic uncertainties.

Purity

No radioactive impurities were detected. (Impurities with total activity greater than 0.001% of the activity of the tritium would have been detected).

Physical Data

Half-life of tritium: 12·43 ± 0·11 years

Maximum beta energy of tritium: 18·6 keV

Remarks:

The S.I. unit of radioactivity is the becquerel.

1 becquerel (Bq) = 1 nuclear transformation per second, therefore
1 curie (Ci) = $3{\cdot}7 \times 10^{10}$ becquerels exactly.

Useful conversion factors are:

1 microcurie (μCi) = $3{\cdot}7 \times 10^4$ Bq = 37 kilobecquerels (kBq)

1 kilobecquerel (kBq) = 27·027 nanocuries (nCi)

This product meets the quality assurance requirements of NRC Regulatory Guide 4.15 for achieving implicit NIST (NBS) traceability as defined in NCRP58 (1985).

CERTIFICATE OF CALIBRATION
Standard Radionuclide Source

70361-278

5 mL Liquid in Flame Sealed Vial

This standard radionuclide source was prepared using aliquots measured gravimetrically from master radionuclide solution sources. The Am-241 was calibrated by 4 pi alpha liquid scintillation counting. All other radionuclides were calibrated using a germanium gamma spectrometer system. Calibration and purity were checked using a germanium gamma spectrometer system. At the time of calibration no interfering gamma-ray emitting impurities were detected. The gamma-ray emission rates for the most intense gamma-ray lines are given. Analytics maintains traceability to the National Institute of Standards and Technology through a Measurements Assurance Program as described in USNRC Regulatory Guide 4.15, Rev. 1, February, 1979.

Calibration date: April 1, 2005 12:00 EST

Certificate of Participation

Analytics, Incorporated
Atlanta, Georgia

is a participant for the period January 1, 2005, through December 31, 2005, in a radioactivity measurements assurance program conducted by the National Institute of Standards and Technology, in cooperation with the Nuclear Energy Institute. Continued participation is evidenced by dated Reports of Traceability issued for particular radionuclides, which indicate the deviation of the participant's reported value from that measured by the National Institute of Standards and Technology. The significance of these Reports is addressed below.*

For the Director,

Michael P. Unterweger, Acting Leader
Radioactivity Group
Physics Laboratory

*As guidance for the proper use of Reports of Traceability, it should be emphasized that the National Institute of Standards and Technology is concerned only with fostering good measurements capability and consistency with the national measurements system. The assurance of the proper application of that capability to the ultimate consumer products is the responsibility of each manufacturer of these products and of the Federal regulatory agencies.

A continuing traceability program in radioactivity demonstrates, to the degree established by the periodic assays of calibrated radioactivity samples, a continuing competence to maintain the methods and standards necessary for accurate measurement. Such a program cannot, however, endorse each and every measurement nor the final product, any more than a spot check can vouch for every unchecked item. Care should be taken, therefore, not to imply such endorsement. The proper use of this Report is governed by section 200.114 of Title 15 of the Code of Federal Regulations. These regulations may be met if Reports are quoted only in their entirety. Excerpts out of context may be misleading.

[1]Calibration Methods:

4π LS (4 pi Liquid Scintillation Counting)
HPGe (High Purity Germanium Gamma Ray Spectrometer)
IC (Gamma Ray Ionization Chamber)

[2]As Percent (%)from counting data

No interfering gamma emitting impurities were detected during calibration. Depending on the resolution and energy dispersion (keV/channel) of the measuring system, the following spectral conflicts may occur: (1) between the 88 keV gamma-ray and the X-rays emitted in the decay of Hg-203, (2) between the 1333 keV gamma-ray and the 1325 keV single escape peak from the 1836 keV gamma-ray.

CERTIFICATE OF CALIBRATION
ALPHA STANDARD SOLUTION

Radionuclide	Am-243	Customer:	GENERAL ENGINEERING LABS
Half Life:	7380 ± 40 years	P.O.No.:	9290-RAD
Catalog No.:	7243	Reference Date:	January 1 1994 12:00 PST.
Source No.:	445-96-2	Contained Radioactivity:	(Am-243) 101.2 μCi
		Contained Radioactivity:	(Am-243) 3750 kBq

Description of Solution

a. Mass of solution:	5.3739 g (in a 5 ml Flame Sealed Ampoule)	
b. Chemical form:	Am(NO3)3 in 2N HNO3	
c. Carrier content:	None added	
d. Density:	1.0651	g/ml @ 20°C.

Radioimpurities None detected

Radioactive Daughters

Np-239 (beta active) in equilibrium

Radionuclide Concentration

(Am-243) 18.84 μCi/g

Method of Calibration

Weighed aliquots of the solution were assayed using gamma spectrometry for Np-239:

Energy peak(s) intergrated under:	228, 278	keV.
Branching ratio(s) used:	0.108, 0.1420	gamma rays per decay.

Uncertainty of Measurement

a. Systematic uncertainty in instrument calibration:	±3.0%
b. Random uncertainty in assay:	±0.4%
c. Random uncertainty in weighing(s):	±0.0%
d. Total uncertainty at the 99% confidence level:	±3.0%

NIST Traceability

This calibration is implicitly traceable to the National Institute of Standards and Technology.

Leak Test(s)

See reverse side for Leak Test(s) applied to this source.

Notes

1. Nuclear data were taken from "Table of Radioactive Isotopes", edited by Virginia S. Shirley, 1986.
2. IPL participates in an NIST measurement assurance program to establish and maintain implicit traceability for a number of nuclides, based on the blind assay (and later NIST certification) of Standard Reference Materials (As in NRC Regulatory Guide 4.15).

RC-S-005-32

THE LEAK TEST(S) INDICATED BY THE CHECKED BOX(ES) WAS(WERE) APPLIED TO DETERMINE THE INTEGRITY OF THE SOURCE DESCRIBED ON THE FRONT SIDE

☑ **1. STANDARD WIPE TEST**

The source is wiped over its entire surface with a moistened filter paper disk. After drying, the disk is checked for activity using a windowless proportional counter or end-window G.M. tube. Activity levels exceeding 0.001 μCi beta-gamma or 0.0001 μCi alpha are cause for rejection of the source.

☐ **2. SOAK TEST**

The source is immersed in distilled water and maintained at 50 ± 10° C for a minimum of four hours. After removal of the source, the liquid is a) checked for activity using a liquid scintillation counter, or b) evaporated in a planchet and the residue is checked for activity using a windowless proportional counter or end-window G.M. tube. Activity levels exceeding 0.001 μCi beta-gamma or 0.0001 μCi alpha are cause for rejection of the source.

☐ **3. SOAK TEST -- BERYLLIUM WINDOW**

The source is immersed in distilled water and maintained at 50 ± 10° C for 20 minutes. The entire surface of the source is then wiped with a moistened cotton swab or filter paper disk. After drying, the swab or disk is checked for activity using a windowless proportional counter or end-window G.M. tube. Activity levels exceeding 0.001 μCi beta-gamma or 0.0001 μCi alpha are cause for rejection of the source.

☐ **4. GAS SOURCE TEST (Radioactive Gas)**

The source is placed in a vacuum desiccator and maintained at a pressure of less than 1 mm Hg for not less than 12 hours. The activity is checked by introducing air into the desiccator and monitoring the air with an end-window G.M. tube. Activity levels exceeding 1000 cpm are cause for rejection of the source.

☑ **5. OTHER LEAK TEST**

The ampoule is kept in an inverted position on a filter paper disk for a minimum of 16 hours. The filter paper disk is then checked for activity using a windowless proportional counter or end-window G.M. tube. Activity levels exceeding 0.001 μCi beta-gamma or 0.0001 μCi alpha are cause for rejection of the source.

☐ **6. LEAK TEST NOT APPLICABLE**

The active area of this source is uncovered or is protected by a very thin coating. Although the deposit is adherent, it is not designed or certified to pass a standard leak test. The inactive portions of the source have been checked using the standard wipe test. Levels of removable activity did not exceed 0.001 μCi beta-gamma or 0.0001 μCi alpha at the time of shipment.

CERTIFICATE OF CALIBRATION

Standard Radionuclide Source

65338-278

Am-241 5 mL Liquid in Flame Sealed Vial

This standard radionuclide source was prepared gravimetrically from a calibrated master solution. The master solution was calibrated by liquid scintillation counting.

Radionuclide purity and calibration were checked by germanium gamma-ray spectrometry and liquid scintillation counting. The nuclear decay rate and assay date for this source are given below.

ANALYTICS maintains traceability to the National Institute of Standards and Technology through Measurements Assurance Programs as described in USNRC Reg. Guide 4.15, Revision 1.

Standard Reference Material 4334H
Plutonium-242 Radioactivity Standard

This Standard Reference Material (SRM) consists of radioactive plutonium-242 nitrate and nitric acid dissolved in 5 mL of distilled water. The solution is contained in a flame-sealed NIST borosilicate-glass ampoule. The SRM is intended for the calibration of alpha-particle counting instruments and for the monitoring of radiochemical procedures.

Radiological Hazard: The SRM ampoule contains plutonium-242 with a total activity of approximately 150 Bq. Plutonium-242 decays by alpha-particle emission. None of the alpha particles escape from the SRM ampoule. During the decay process, X-rays and gamma rays with energies from 10 keV to 160 keV are also emitted. Most of these photons escape from the SRM ampoule but their intensities are so small that they do not represent a radiation hazard. Approximate unshielded dose rates at several distances (as of the reference time) are given in note [a]*. The SRM should be used only by persons qualified to handle radioactive material.

Chemical Hazard: The SRM ampoule contains nitric acid (HNO_3) with a concentration of 3 moles per liter of water. The solution is corrosive and represents a health hazard if it comes in contact with eyes or skin. If the ampoule is to be opened to transfer the solution, the recommended procedure is given on page 2. The ampoule should be opened only by persons qualified to handle both radioactive material and strong acid solution.

Storage and Handling: The SRM should be stored and used at a temperature between 5 °C and 65 °C. The solution in an unopened ampoule should remain stable and homogeneous until at least January 2015. The ampoule (or any subsequent container) should always be clearly marked as containing radioactive material. If the ampoule is transported it should be packed, marked, labeled, and shipped in accordance with the applicable national, international, and carrier regulations. The solution in the ampoule is a dangerous good (hazardous material) both because of the radioactivity and because of the strong acid.

Preparation: This Standard Reference Material was prepared in the Physics Laboratory, Ionizing Radiation Division, Radioactivity Group, M.P. Unterweger, Acting Group Leader. The overall technical direction and physical measurements leading to certification were provided by L.L. Lucas of the Radioactivity Group. The support aspects involved in the preparation, certification, and issuance of this SRM were coordinated through the Standard Reference Materials Program.

RC-S-039-041a

Recommended Procedure for Opening the SRM Ampoule

1) If the SRM solution is to be diluted, it is recommended that the diluting solution have a composition comparable to that of the SRM solution.

2) Wear eye protection, gloves, and protective clothing and work over a tray with absorbent paper in it. Work in a fume hood. In addition to the radioactive material, the solution usually contains strong acid or base and is corrosive.

3) Shake the ampoule to wet all of the inside surface of the ampoule. Return the ampoule to the upright position.

4) Check that all of the liquid has drained out of the neck of the ampoule. If necessary, gently tap the neck to speed the process.

5) Holding the ampoule upright, score the narrowest part of the neck with a scribe or diamond pencil.

6) Lightly wet the scored line. This reduces the crack propagation velocity and makes for a cleaner break.

7) Hold the ampoule upright with a paper towel, a wiper, or a support jig. Position the scored line away from you. Using a paper towel or wiper to avoid contamination, snap off the top of the ampoule by pressing the narrowest part of the neck away from you while pulling the tip of the ampoule towards you.

8) Transfer the solution from the ampoule using a pycnometer or a pipet with dispenser handle. NEVER PIPETTE BY MOUTH.

9) Seal any unused SRM solution in a flame-sealed glass ampoule, if possible, to minimize the evaporation loss.

NOTES

[a] The Sievert is the SI unit for dose equivalent. See reference [1]. One μSv is equal to 0.1 mrem.

Distance from Ampoule (cm):	1	30	100
Approximate Dose Rate (μSv/h):	<0.1	-	-

[b] The plutonium-242 master solution was chemically purified at 1200 EST, 07 June 1994.

[c] **Massic activity** is the preferred name for the quantity activity divided by the total mass of the sample. See reference [1].

[d] The reported value, y, of massic activity (activity per unit mass) at the reference time was not measured directly but was derived from measurements and calculations of other quantities. This can be expressed as $y = f(x_1, x_2, x_3, \ldots x_n)$, where f is a mathematical function derived from the assumed model of the measurement process. The value, x_i, used for each input quantity i has a **standard uncertainty**, $u(x_i)$, that generates a corresponding uncertainty in y, $u_i(y) \equiv |\partial y/\partial x_i| \cdot u(x_i)$, called a **component of combined standard uncertainty** of y. The **combined standard uncertainty** of y, $u_c(y)$, is the positive square root of the sum of the squares of the components of combined standard uncertainty. The combined standard uncertainty is multiplied by a **coverage factor** of $k = 2$ to obtain U, the **expanded uncertainty** of y.

Since it can be assumed that the possible estimated values of the massic activity are approximately normally distributed with approximate standard deviation $u_c(y)$, the unknown value of the massic activity is believed to lie in the interval $y \pm U$ with a level of confidence of approximately 95 percent.

For further information on the expression of uncertainties, see references [2] and [3].

RC-S-039-041e

[e] The value of each component of combined standard uncertainty, and hence the value of the expanded uncertainty itself, is a best estimate based upon all available information, but is only approximately known. That is to say, the "uncertainty of the uncertainty" is large and not well known. This is true for uncertainties evaluated by statistical methods (e.g., the relative standard deviation of the standard deviation of the mean for the massic response is approximately 50%) and for uncertainties evaluated by other methods (which could easily be over estimated or under estimated by substantial amounts). The unknown value of the expanded uncertainty is believed to lie in the interval $U/2$ to $2U$ (i.e., within a factor of 2 of the estimated value).

[f] The stated uncertainty is two times the standard uncertainty.

[g] Estimated limits of detection for alpha-particle-emitting impurities, expressed as massic alpha-particle emission rates (numbers of alpha particles per second per gram), are:
0.003 s−1•g−1 for energies less than 3.1 MeV,
0.03 s−1•g−1 for energies between 3.1 and 4.4 MeV, and
0.003 s−1•g−1 for energies greater than 5.0 MeV.

[h] The plutonium-242 master solution was chemically purified at 1200 EST, 07 June 1994. Americium-241, the daughter of plutonium-241, was removed but has been growing in since that time.

[i] Estimated limits of detection for photon-emitting impurities, expressed as massic photon emission rates (numbers of photons per second per gram), are:
5 × 10-5 s−1•g−1 for energies between 19 and 39 keV,
7 × 10-5 s−1•g−1 for energies between 49 and 92 keV,
2 × 10-5 s−1•g−1 for energies between 106 and 507 keV,
1 × 10-5 s−1•g−1 for energies between 515 and 1456 keV, and
5 × 10-6 s−1•g−1 for energies between 1465 and 2750 keV,
provided that the photons are separated in energy by 4 keV or more from photons emitted in the decay of plutonium-242, plutonium-241, or americium-241.

[j] The stated uncertainty is the standard uncertainty.

[k] Relative standard uncertainty of the input quantity x_i.

[m] The relative change in the output quantity y divided by the relative change in the input quantity x_i. If $|\partial y/\partial x_i|\cdot(x_i/y) = 1.0$, then a 1% change in x_i results in a 1% change in y. If $|\partial y/\partial x_i|\cdot(x_i/y) = 0.05$, then a 1% change in x_i results in a 0.05% change in y.

[n] Relative component of combined standard uncertainty of output quantity y, rounded to two significant figures or less. The relative component of combined standard uncertainty of y is given by $u_i(y)/y \equiv |\partial y/\partial x_i|\cdot u(x_i)/y = |\partial y/\partial x_i|\cdot(x_i/y)\cdot u(x_i)/x_i$. The numerical values of $u(x_i)/x_i$, $|\partial y/\partial x_i|\cdot(x_i/y)$, and $u_i(y)/y$, all dimensionless quantities, are listed in columns 3, 4, and 5, respectively. Thus, the value in column 5 is equal to the value in column 4 multiplied by the value in column 3. The input quantities are independent, or very nearly so. Hence the covariances are zero or negligible.

RC-S-039-041f

[p] The relative standard uncertainty of $\lambda \cdot t$ is determined by the relative standard uncertainty of λ (i.e., of the half life). The relative standard uncertainty of t is negligible.

[q] $|\partial y/\partial x_i| \cdot (x_i/y) = |\lambda \cdot t|$

[r] The live time is determined by counting the pulses from a gated crystal-controlled oscillator.

[s] The standard uncertainty for each undetected impurity that might reasonably be expected to be present is estimated to be equal to the estimated limit of detection for that impurity, i.e. $u(x_i)/x_i$ = 100%. $|\partial y/\partial x_i| \cdot (x_i/y)$ = {(response per Bq of impurity)/(response per Bq of Pu-242)}•{(Bq of impurity)/(Bq of Pu-242)}. Thus $u_i(y)/y$ is the relative change in y if the impurity were present with a massic activity equal to the estimated limit of detection.

[t] The stated uncertainty is the standard uncertainty. The plutonium-241 activity was calculated from a gamma-ray measurement of the americium-241 ingrowth as of 25 November 1998, assuming that americium-241 was completely removed at the time of chemical purification.

[u] Using alpha-particle spectrometry, no alpha-particle emission was detected that could reliably be ascribed to these radionuclides. The value shown is an estimated upper limit based upon background and counting statistics. Measurements were made at the Lawrence Livermore National Laboratory (LLNL) in July of 1994.

[v] Using alpha-particle spectrometry, no alpha-particle emission was detected that could reliably be ascribed to these radionuclides. The stated uncertainty is the standard uncertainty. Measurements were made at the National Institute of Standards and Technology (NIST) in June and July of 1999.

Verification for Plutonium-242 Standard 0757-A

	Isotope	Value pCi/L	Uncertainty pCi/L
Analyst: A. Fehr			
Date: 5/31/05	0756-A N1	3.600	0.374
	0756-A N2	3.530	0.363
	0756-A N3	3.710	0.404
Mean Value (Counting) =	3.613	95.36%	**Pass**
Stdev =	0.090737717		**Rule 3 (Pass/Fail)**
Target =	3.79		
Lower Limit =	3.431857899		
Upper Limit =	3.794808768		
Rule 1 (Pass/Fail)	**Pass**		
Two sigma =	0.181475435		
10 % of Mean =	0.361333333		
Rule 2 (Pass/Fail)	**Pass**		

Rule 1 = The certificate value (NOT including any uncertainty) shall lie within the 95% confidence interval determined from the mean and two sigma standard deviation of the three measurements
Rule 2 = The two sigma value used for the 95% confidence interval shall not exceed 10% of the mean value of the three verification measurements.
Rule 3 = The determined mean value shall be within 10% of the certificate value.

The analyst prepared three standard verification sources for standard **0757-A** using 0.1 mL for each source. Each standard was combined with 0.1 mL of **Pu239** standard **0338-N** and 50 micrograms of neodymium carrier in a disposable centrifuge tube containing 4 mL of 2 M HCl and 6 mL of DI water. Five drops of 25% Hydrazine was add to each centrifuge tube and swirled. After 10 minutes, two mL of 48% HF was added to precipitate neodymium(and plutonium) fluoride. After 30 minutes, each sample was filtered following routine procedures for alpha spectroscopy source preparation. Each source was counted using routine alpha spec procedures. DPM values for **Pu-242** were calculated by comparison to **Pu-239** certified values.

CERTIFICATE OF CALIBRATION

Standard Radionuclide Source

60513-278

Pu-239 5 mL Liquid in Flame Sealed Vial

This standard radionuclide source was prepared using an aliquot measured gravimetrically from a master radionuclide solution standard. The master radionuclide solution standard was calibrated by the Department Des Applications Et De La Metrologie Des Rayonnements Ionisants (DAMRI), Paris, France, as Number 24148.

Radionuclide purity and calibration were checked by germanium gamma-ray spectrometry and liquid scintillation counting. The nuclear decay rate and assay date for this source are given below.

ANALYTICS maintains traceability to the National Institute of Standards and Technology through Measurements Assurance Programs as described in USNRC Reg. Guide 4.15, Revision 1.

Standard Reference Material 4321C
Natural Uranium Radioactivity Standard

This Standard Reference Material (SRM) consists of radioactive natural uranium nitrate and nitric acid dissolved in 5 mL of distilled water. The solution is contained in a flame-sealed NIST borosilicate-glass ampoule. The SRM is intended for the calibration of alpha-particle counting instruments and for the monitoring of radiochemical procedures.

Radiological Hazard

The SRM ampoule contains uranium-238, uranium-235, and uranium-234 with a total activity of approximately 2600 Bq. Uranium decays by alpha-particle emission. The progeny of uranium-238, uranium-235, and uranium-234 have a total activity of approximately 2600 Bq and decay by alpha- and beta-particle emission. None of the alpha or beta particles escape from the SRM ampoule. During the decay process X-rays and gamma rays with energies from 11 keV to 2.0 MeV are also emitted. Most of these photons escape from the SRM ampoule but their intensities are so small that they do not represent a radiation hazard. Approximate unshielded dose rates at several distances (as of the reference time) are given in note [a]*. The SRM should be used only by persons qualified to handle radioactive material.

Chemical Hazard

The SRM ampoule contains nitric acid (HNO_3) with a concentration of 1 mole per liter of water. The solution is corrosive and represents a health hazard if it comes in contact with eyes or skin. If the ampoule is to be opened to transfer the solution, the recommended procedure is given on page 2. The ampoule should be opened only by persons qualified to handle both radioactive material and strong acid solution.

Storage and Handling

The SRM should be stored and used at a temperature between 5 and 65 °C. The solution in an unopened ampoule should remain stable and homogeneous until at least August 2007.

The ampoule (or any subsequent container) should always be clearly marked as containing radioactive material. If the ampoule is transported it should be packed, marked, labeled, and shipped in accordance with the applicable national, international, and carrier regulations. The solution in the ampoule is a dangerous good (hazardous material) both because of the radioactivity and because of the strong acid.

Preparation

This Standard Reference Material was prepared in the Physics Laboratory, Ionizing Radiation Division, Radioactivity Group, J.M.R. Hutchinson, Group Leader. The overall technical direction and physical measurements leading to certification were provided by L.L. Lucas of the Radioactivity Group.

The support aspects involved in the preparation, certification, and issuance of this SRM were coordinated through the Standard Reference Materials Program by N.M. Trahey.

Gaithersburg, Maryland 20899
November 1997

Thomas E. Gills, Chief
Standard Reference Materials Program

*Notes and references are on pages 5 and 6.

RC-S-034-051a

Recommended Procedure for Opening the SRM Ampoule

1) If the SRM solution is to be diluted, it is recommended that the diluting solution have a composition comparable to that of the SRM solution.

2) Wear eye protection, gloves, and protective clothing and work over a tray with absorbent paper in it. Work in a fume hood. In addition to the radioactive material, the solution contains strong acid and is corrosive.

3) Shake the ampoule to wet all of the inside surface of the ampoule. Return the ampoule to the upright position.

4) Check that all of the liquid has drained out of the neck of the ampoule. If necessary, gently tap the neck to speed the process.

5) Holding the ampoule upright, score the narrowest part of the neck with a scribe or diamond pencil.

6) Lightly wet the scored line. This reduces the crack propagation velocity and makes for a cleaner break.

7) Hold the ampoule upright with a paper towel, a wiper, or a support jig. Position the scored line away from you. Using a paper towel or wiper to avoid contamination, snap off the top of the ampoule by pressing the narrowest part of the neck away from you while pulling the tip of the ampoule towards you.

8) Transfer the solution from the ampoule using a pycnometer or a pipet with dispenser handle. NEVER PIPETTE BY MOUTH.

9) Seal any unused SRM solution in a flame-sealed glass ampoule, if possible, to minimize the evaporation loss.

See also reference [4]*.

NOTES

[a] The Sievert is the SI unit for dose equivalent. See reference [1]. One μSv is equal to 0.1 mrem.

Distance from Ampoule (cm):	1	30	100
Approximate Dose Rate (μSv/h):	<0.1	-	-

[b] The stated uncertainty is two times the standard uncertainty.

[c] **Massic activity** is the preferred name for the quantity activity divided by the total mass of the sample. See reference [1].

[d] The reported value, y, of massic activity (activity per unit mass) at the reference time was not measured directly but was derived from measurements and calculations of other quantities. This can be expressed as $y = f(x_1, x_2, x_3, \ldots x_n)$, where f is a mathematical function derived from the assumed model of the measurement process.

The value, x_i, used for each input quantity i has a **standard uncertainty**, $u(x_i)$, that generates a corresponding uncertainty in y, $u_i(y) \equiv |\partial y/\partial x_i| \cdot u(x_i)$, called a **component of combined standard uncertainty** of y.

The **combined standard uncertainty** of y, $u_c(y)$, is the positive square root of the sum of the squares of the components of combined standard uncertainty.

The combined standard uncertainty is multiplied by a **coverage factor** of $k = 2$ to obtain U, the **expanded uncertainty** of y.

Since it can be assumed that the possible estimated values of the massic activity are approximately normally distributed with approximate standard deviation $u_c(y)$, the unknown value of the massic activity is believed to lie in the interval $y \pm U$ with a level of confidence of approximately 95 percent.

For further information on the expression of uncertainties, see references [2] and [3].

[e] The value of each standard uncertainty component, and hence the value of the expanded uncertainty itself, is a best estimate based upon all available information, but is only approximately known. That is to say, the "uncertainty of the uncertainty" is large and not well known. This is true for uncertainties evaluated by statistical methods (e.g., the relative standard deviation of the standard deviation of the mean for the massic count rate is approximately 50%) and for uncertainties evaluated by other methods (which could easily be over estimated or under estimated by substantial amounts). The unknown value of the expanded uncertainty is believed to lie in the interval $U/2$ to $2U$ (i.e., within a factor of 2 of the estimated value).

[f] Estimated limits of detection for photon-emitting impurities are:
1.4 $\gamma \cdot s^{-1} \cdot g^{-1}$ for energies between 8 and 59 keV,
1.1 $\gamma \cdot s^{-1} \cdot g^{-1}$ for energies between 67 and 88 keV,
0.5 $\gamma \cdot s^{-1} \cdot g^{-1}$ for energies between 102 and 197 keV,
0.3 $\gamma \cdot s^{-1} \cdot g^{-1}$ for energies between 205 and 762 keV,
0.2 $\gamma \cdot s^{-1} \cdot g^{-1}$ for energies between 770 and 996 keV, and
0.1 $\gamma \cdot s^{-1} \cdot g^{-1}$ for energies between 1006 and 1900 keV,
provided that the photons are separated in energy by 4 keV or more from photons emitted in the decay of uranium-238, uranium-235, uranium-234, or their progeny.

[g] The stated uncertainty is the standard uncertainty. See reference [5].

RC-S-034-051e

[h] Relative standard uncertainty of the input quantity x_i.

[i] The relative change in the output quantity y divided by the relative change in the input quantity x_i. If $|\partial y/\partial x_i| \cdot (x_i/y) = 1.0$, then a 1% change in x_i results in a 1% change in y. If $|\partial y/\partial x_i| \cdot (x_i/y) = 0.05$, then a 1% change in x_i results in a 0.05% change in y.

[j] Relative component of combined standard uncertainty of output quantity y, rounded to two significant figures or less. The relative component of combined standard uncertainty of y is given by $u_i(y)/y \equiv |\partial y/\partial x_i| \cdot u(x_i)/y = |\partial y/\partial x_i| \cdot (x_i/y) \cdot u(x_i)/x_i$. The numerical values of $u(x_i)/x_i$, $|\partial y/\partial x_i| \cdot (x_i/y)$, and $u_i(y)/y$, all dimensionless quantities, are listed in columns 3, 4, and 5, respectively. Thus, the value in column 5 is equal to the value in column 4 multiplied by the value in column 3. The input quantities are independent, or very nearly so. Hence the covariances are zero or negligible.

[k] The standard uncertainty for each undetected impurity that might reasonably be expected to be present is estimated to be equal to the estimated limit of detection for that impurity, i.e. $u(x_i)/x_i = 100\%$. $|\partial y/\partial x_i| \cdot (x_i/y)$ = {(response per Bq of impurity)/(response per Bq of U-238)}•{(Bq of impurity)/(Bq of U-238)}. Thus $u_i(y)/y$ is the relative change in y if the impurity were present with a massic activity equal to the estimated limit of detection.

Upper Limit =	2.62	pCi/L			
Rule 1 Pass/Fail	**Pass**	**Pass**		**Pass**	
Two sigma =	0.14				
10 % of Mean =	0.248				
Rule 2 (Pass/Fail)	**Pass**				

The analyst prepared three standard verification sources for standard **0389-G** using 0.2 mL for each source. Each standard was combined with 0.2 mL of **U-232** standard **0688-D** and was diluted to 10 mL with 1M HCL. 50 micrograms of neodymium carrier, and 1 mL of Titanium Chloride were added. Two mL of 48% HF was then added to precipitate neodymium (and **uranium**) fluoride. After 30 minutes, each sample was filtered following routine procedures for alpha spectroscopy source preparation. Each source was counted using routine alpha spec procedures. DPM values for **U-238** were calculated by comparison to **U-232** certified values.

CERTIFICATE OF CALIBRATION
ALPHA STANDARD SOLUTION

0159

Radionuclide	Th-230	Customer:	GENERAL ENGINEERING LABS
Half Life:	(7.54 ± 0.03) x 10^4 years	P.O.No.:	2507 RD
Catalog No.:	7230	Reference Date:	1 Sep 99 12:00 PST.
Source No.:	678-28-1	Contained Radioactivity:	Th-230: 9.740 μCi (360.4 kBq)

Description of Solution

a. Mass of solution: 4.89252 grams in 5 mL flame sealed ampoule
b. Chemical form: Thorium nitrate in 0.1M nitric acid
c. Carrier content: 10 μg Th/mL of solution
d. Density: 1.0016 gram/ml @ 20°C.

Radioimpurities

Am-241: See Technical Data Sheet

Radioactive Daughters

Ra-226: See Technical Data Sheet

Radionuclide Concentration

Th-230: 1.991 μCi/gram of solution (73.67 kBq/gram of solution)

Method of Calibration

Weighed aliquots of the solution were assayed using a liquid scintillation counter.

Uncertainty of Measurement

a. Systematic uncertainty in instrument calibration:	±2.0%
b. Random uncertainty in assay:	±0.8%
c. Random uncertainty in weighing(s):	±0.0%
d. Total uncertainty at the 99% confidence level:	±2.2%

NIST Traceability

This calibration is implicitly traceable to the National Institute of Standards and Technology.

Leak Test(s)

See reverse side for Leak Test(s) applied to this source.

Notes

1. IPL participates in an NIST measurement assurance program to establish and maintain implicit traceability for a number of nuclides, based on the blind assay(and later NIST certification) of Standard Reference Materials. (As in NRC Regulatory Guide 4.15)

2. Nuclear data were taken from Table of Radioactive Isotopes (1986), edited by Virginia Shirley.

Verification Rules

Rule 1 = The certificate value (NOT including any uncertainty) shall lie within the 95% confidence interval determined from the mean and two sigma standard deviation of the three measurements
Rule 2 = The two sigma value used for the 95% confidence interval shall not exceed 10% of the mean value of the three verification measurements.

The analyst prepared three standard verification sources for Th-230 source 0159-O by transferring 1.0 mL portions of the standard to glass liquid scintillation vials. Ten mL of Ready Gel liquid scintillation cocktail was added to each vial and the vials were shaken to mix. A Blank vial was prepared in a similar fashion using 1 mL of DI water and 10 mL of Ready Gel cocktail. The standard verification vials and Background source were dark adapted for two hours and counted on LSC Yellow (Wallac) using Protocol 26 for alpha source standard verification. The alpha efficiency calibration which was used for verification calculations was performed using NIST source 0556-A (Th-230). Calibration data is recorded in this logbook under Th-230 0556-A. Each verification source calculation was performed as follows:

Source dpm/g = (A - B)/(C)(D)
where:
A = Ver. source cpm,
B = BKG cpm,
C = System efficiency, (cpm/dpm), and
D = mass used for standard verification.

0133

Certificate of calibration of absolutely standardised radioactive solution

P 3574

UKAS ACCREDITED CALIBRATION LABORATORY No. 0146

Measurement

Reference time for solution number **S6/7/19**: **1200 GMT on 1 April 1996**

Radioactive concentration of strontium-90:	477.1	kilobecquerels per gram of solution
which is equivalent to:	12.89	microcuries per gram of solution
Mass of solution:	5.0669	grams
Total activity of strontium-90:	2.417	megabecquerels
which is equivalent to:	65.3	microcuries

Method of measurement used (see page 3 of the certificate): K

Calibration dates: 25 March 1996 to 27 March 1996

The calibration date is provided for added information only, and must not be confused with the reference date on pages 1 and 2 of the certificate. It is the reference date that must be used in all calculations relating to the values of activity.

Accuracy

Expanded uncertainty in the radioactive concentration quoted above: ± 0.80 %

Combined Type A uncertainty : ± 0.05 %

Combined Type B uncertainty : ± 0.40 %

Radionuclidic purity

The estimated activities of any radioactive impurities found by high-resolution gamma ray spectrometry, or in any other examination of the solution, are listed below expressed as percentages of the activity of the principal radionuclide at the reference time.

Other radionuclides 0.0005(3) %

Chemical composition

0.1 M HCl containing 100 micrograms of strontium and 100 micrograms of yttrium per ml.

Physical data

Recommended half life: 29.12 ± 0.24 years (1 year = 365.25 days)

Strontium-90: 100% beta particle emission.
Yttrium-90: 100% beta particle emission. Half life 64.1 ± 0.1 hours.

The activity of the yttrium-90 is equal to the activity of the strontium-90.

Remarks

This product meets the quality assurance requirements for achieving traceability to NIST as defined in ANSI N42.22-1995.

Tests made over a period of 2 years on standardised solutions of strontium-90 stored in glass ampoules have shown that loss of strontium-90 from solution is negligible other than by radioactive decay.

NAMAS
CALIBRATION
No. 0146

ISSUED BY:	Nycomed Amersham plc Radiation & Radioactivity Calibration Laboratory Amersham Laboratories White Lion Road Amersham Buckinghamshire HP7 9LL	ISSUED FOR:	AEA Technology plc Isotrak Amersham Laboratories White Lion Road Amersham Buckinghamshire HP7 9LL

Description Principal radionuclide: Strontium-90

Product code: SIZ64
Solution number: S6/7/19

Measurement Reference time: 1200 GMT on 1 April 1996

Nuclear data Nuclear data quoted on this certificate are taken from the Joint European File, Version 2.2.

Expression of uncertainties The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor $k = 2.00$, which for a t-distribution with $\nu_{eff} = \infty$ effective degrees of freedom corresponds to a coverage probability of approximately 95%. The uncertainty evaluation has been carried out in accordance with UKAS requirements.

Unless indicated, all other uncertainties are expressed at the confidence level associated with one standard uncertainty.

The format used for the uncertainties in the values of radionuclidic purity is illustrated by the following examples;

6.5(21)	=	6.5 ± 2.1
6.54(21)	=	6.54 ± 0.21
6.543(21)	=	6.543 ± 0.021

Certificate of calibration of absolutely standardised radioactive solution

P 35474

UKAS ACCREDITED CALIBRATION LABORATORY No. 0146

Methods of measurement

The measurement techniques listed below are currently in use at Nycomed Amersham for the absolute standardisation of radioactive solutions. The methods used for this standardisation are indicated on page 2 of the certificate.

Using a gas flow proportional counter

A	4 pi beta counting
B	4 pi alpha counting
C	4 pi internal conversion electron counting
D	4 pi coincidence counting
E	4 pi anticoincidence counting
F	4 pi coincidence and anticoincidence counting

Using a liquid scintillation counter

G	4 pi coincidence counting
H	4 pi anticoincidence counting
J	4 pi coincidence and anticoincidence counting
K	4 pi efficiency tracing

SI unit of radioactivity

The S.I. unit of radioactivity is the becquerel

1 becquerel (Bq) = 1 nuclear transformation per second, therefore

1 curie (Ci) = 3.7×10^{10} becquerels exactly

Useful conversion factors are:

1 microcurie (μCi)	=	3.7×10^{4} Bq	=	37 kilobecquerels (kBq)
1 millicurie (mCi)	=	3.7×10^{7} Bq	=	37 megabecquerels (MBq)
1 kilobecquerel (kBq)	=	27.027 nanocuries (nCi)		
1 megabecquerel (MBq)	=	27.027 microcuries (μCi)

Verification Rules

Rule 1 = The certificate value (NOT including any uncertainty) shall lie within the 95% confidence interval determined from the mean and two sigma standard deviation of the three measurements
Rule 2 = The two sigma value used for the 95% confidence interval shall not exceed 10% of the mean value of the three verification measurements.
Rule 3 = The determined mean value shall be within 10% of the certificate value.

1801

The analyst prepared three standard verification sources for Sr-90 source 0133-N by transferring 1.0 mL portions of the standard into glass liquid scintillation vials. Ten mL of Ready Gel liquid scintillation cocktail was added to each vial and the vials were shaken to mix. A Blank vial was prepared in a similar fashion using 1 mL of DI water and 10 mL of Ready Gel cocktail. The standard verification vials and Background source were dark adapted for two hours and counted on LSC Yellow (Wallac) using Protocol 17 for Sr-90 source standard verification. The Sr-90 efficiency calibration which was used for verification calculations was performed on 5/24/05 using source
0717-A (Sr-90). Calibration data is recorded in this logbook under Sr-90 0418. Each verification source calculation was performed as follows:

Source dpm/g = (A - B)/(C)(D)
where:
A = Ver. source cpm,
B = BKG cpm,
C = System efficiency, (cpm/dpm), and
D = mass used for standard verification.

Standard Reference Material 4967
Radioactivity Standard

Radionuclide	Radium-226 [1]*
Source identification	SRM 4967
Source description	Liquid in a 5-mL, flame-sealed NIST borosilicate-glass ampoule [2]
Solution composition	Approximately 1.4 mol•L^{-1} HCl[3] containing 1.74 mg $BaCl_2$ per gram of solution[4] and Ra^{+2} [5]
Solution density	1.019 ± 0.001 g•mL^{-1} at 22 °C [6]
Solution mass	5.1167 ± 0.0027 g [7]
Radium-226 activity concentration	2729 Bq•g^{-1} [8]
Reference time	1200 EST 9 September 1991
Overall uncertainty	1.18 percent [9]
Half life	1600 ± 7 years [10]
Calibration method	NIST pressurized "4π"γ ionization chamber "A" calibrated with the national radium standards[11]; and confirmatory measurements [12]

This standard reference material was prepared in the Physics Laboratory, Ionizing Radiation Division, Radioactivity Group, Dale D. Hoppes, Group Leader.

Gaithersburg, MD
January 1992

William P. Reed, Chief
Standard Reference Materials Program

*Notes on back

RC-S-027-150

NOTES

(1) This standard was prepared by gravimetric dilutions of the "1947 series" of ^{226}Ra standards which were recalibrated at NIST (NBS) in 1967. The "age" of the radium, with accompanying in-growth of ^{210}Pb, is at least 44.3 years.

(2) Approximately five milliliters of solution. Ampoule specifications:

body diameter	16.5 ± 0.5 mm
wall thickness	0.60 ± 0.04 mm
barium content	less than 2.5 percent
lead oxide content	less than 0.02 percent
other heavy elements	trace quantities

(3) Corresponding to a 14.9% (by weight) solution of NIST, high-purity, vacuum-distilled hydrochloric acid (nominal 10 $mol \cdot L^{-1}$) in doubly-distilled water.

(4) The $BaCl_2$ reagent used to prepare the carrier solution was measured in a NaI(Tl) well counter and found to contain ≤ 0.01 Bq ^{226}Ra per gram of $BaCl_2$.

(5) The atom ratio of barium carrier to radium in the solution is approximately 2.5×10^4.

(6) The uncertainty in the density is three times the standard deviation of the mean for three independent gravimetric determinations. Confirmatory measurements based on the total master solution mass and individually dispensed masses in known volumes were in agreement.

(7) Mean mass of the dispensed solution in the ampoule. The uncertainty is three times the standard deviation of 19 individually weighed masses of solution from which the mean mass was calculated.

(8) Corresponding to 7.461×10^{-8} g ^{226}Ra per gram of solution assuming a conversion factor of 36.576 $kBq \cdot \mu g^{-1}$.

(9) The overall uncertainty, 1.18 percent, was formed by taking three times the quadratic combination of the standard deviation of the mean, or approximations thereof, for the following component uncertainties:

a) four ion chamber "A" measurements on samples of 2 dilutions	0.051 percent
b) twenty-two comparative ion chamber "A" measurements on 8 "1947(1967 recalibrated) series" of ^{226}Ra standards	0.040 percent
c) ion chamber calibration for the "1947(1967 recalibrated) series" [with respect to the "radiation balance" primary measurements on the "1957 series" and national radium standards (see note 11)]	0.34 percent
d) gravimetric dilution factor	0.1 percent
e) half-life correction	0.0046 percent
f) ^{226}Ra mass to activity conversion	0.16 percent

(10) NCRP Report No. 58, 2nd ed., Appendix A3 (Feb. 1985).

(11) For further details on NIST (NBS) radium series calibrations see W.B. Mann, et al., J. Res. NBS 62, 21-26 (1959). The 1967 recalibration of the "1947 series" and "1957 series" intercomparisons were made with chamber "A".

(12) For confirmation, this ^{226}Ra standard series was also directly compared against preparations of the "1947" (1967 recalibration)", "1978", and "1984" ^{226}Ra series by ^{222}Rn analyses with the NIST pulse-ionization-chamber Primary Radon Measurement System [R. Collé, et al., J. Res. NIST 95 155-165 (1990); J.M.R. Hutchinson, et al., Appl. Rad. Isot. 43, 175-189 (1992)], by liquid scintillation counting, and by NaI(Tl) well-crystal and Ge γ-spectrometry.

For further information please contact R. Collé, (301) 975-5527.

Verification Rules

Rule 1 = The certificate value (NOT including any uncertainty) shall lie within the 95% confidence interval determined from the mean and two sigma standard deviation of the three measurements
Rule 2 = The two sigma value used for the 95% confidence interval shall not exceed 10% of the mean value of the three verification measurements.
Rule 3 = The determined mean value shall be within 10% of the certificate value.

The analyst prepared three standard verification sources for Ra-226 source 0321-H by transferring portions of the standard into tared glass liquid scintillation vials. One mL of DI Water and 10 mL Ready Gel liquid scintillation cocktail was added to each vial and the vials were shaken to mix. A Blank vial was prepared in a similar fashion using 1 mL of DI water and 10 mL of Ready Gel cocktail. The standard verification vials and Background source were dark adapted for two hours and counted on LSC Green using source standard verification. The Ra-226 efficiency calibration which was used for verification calculations was performed on 5/20/05 using source 0299-A (Ra-226). Calibration data is recorded in this logbook under Ra-226 (0299-A). Each verification source calculation was performed as follows:

Source dpm/g = (A - B)/(C)(D)
where:
A = Ver. source cpm,
B = BKG cpm,
C = System efficiency, (cpm/dpm), and
D = mass used for standard verification.

Memorandum-Revised

Date: 08/18/05

To: William Turney

From: Mark Mensik

Subject: GC/MS Organic Data Review and Validation – LANL WQH
COC: WG-02537-GE
SDG: 139405
Laboratory: GEL
Analysis: VOCs

Data Qualifiers (see following sections for detailed explanations)

Sample GU05050GMC401	The result for 1,4-dioxane should be **qualified J, V7b** due to an initial calibration relative response factor <0.01. The result for isobutyl alcohol should be **qualified UJ, V7b, VWQ9** due to an initial calibration slope <0.05 and continuing calibration verification recovery. The 1,2-dibromoethane result should be **qualified R, VWQ5** due to calibration problems. The result for cis-1,3-dichloropropene should be **qualified UJ, VWQ3** due to low matrix spike duplicate recovery.
Sample GU05050GMC401-FTB	The result for 1,4-dioxane should be **qualified R, V7b** due to a relative response factor <0.01. The result for acetone should be **qualified R, VWQ5, VWQ9** due to calibration problems and continuing calibration verification recovery. The results for acrolein, propionitrile, isobutyl alcohol and acetonitrile should be **qualified UJ, V7b, VWQ9** due to an initial calibration slope or response factor <0.05 and continuing calibration verification recovery. The results for vinyl acetate, 2-hexanone, 2-butanone and methacrylonitrile should be **qualified UJ**, **VWQ9** due to continuing calibration verification recovery. The result for cis-1,3-dichloropropene should be **qualified UJ, VWQ3** due to matrix spike duplicate recovery.

Summary/General Comments

The samples were prepared and analyzed with approved procedures using method SW846 8260B DOE-AL (VOCs). Data were reported for all required analytes.

See attached Data Assessment Worksheets for supporting documentation on the data review and validation.

This validation was performed according to DOE-AL Model Data Validation Procedure Rev. 3.

Sample Shipping/Receiving

All COC, analysis request, and sample receipt documentation was complete and correct with the following exception. The VOC order suite code listed on the COCs for the trip blank was "GW: VOA FTB", while the code listed for the field sample was "WG VOA w/MS+TICs". These codes do not contain identical target analytes. GEL analyzed the trip blank and the field sample based on the "WG VOA w/MS+TICs" order suite code. GEL did not document this discrepancy. No sample data should be qualified based on this discrepancy.

Holding Times and Preservation

The samples were analyzed within the prescribed holding time and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The samples in this SDG were assigned to the same batch, but were analyzed on separate instruments under separate calibrations. All initial and continuing calibration QC acceptance criteria were met with the following exceptions.

The initial calibration for sample GU05050GMC401-FTB had a negative intercept whose absolute value was >3X MDL for acetone. The associated acetone result was non-detect (ND) and should be **qualified R**. The initial calibration for sample GU05050GMC401-FTB had positive intercepts for 1,1dichloroethylene; iodomethane; acetonitrile; 2-butanone; bromoform and 1,2-dibromo-3-chloropropane that were >3X MDL. None of these compounds were detected in this sample and thus should not be qualified.

The initial calibration for 1,4-dioxane associated with sample GU05050GMC401-FTB had a RF < 0.01. The 1,4-Dioxane result was ND for this sample, and should be **qualified R**. The initial calibration associated with sample GU05050GMC401-FTB had slopes or response factors $\geq$ 0.01 but < 0.05 for acrolein, acetonitrile, isobutyl alcohol and propionitrile. All associated sample results were ND for this sample and should be **qualified UJ**.

The continuing calibration verification (CCV) percent differences (%Ds) associated with sample GU05050GMC401-FTB were >20%, with positive bias, for dichlorodifluoromethane and allyl chloride. The associated sample results were ND for these compounds and should not be qualified.

The CCV %Ds associated with sample GU05050GMC401-FTB were >20% but ≤40%, with negative bias, for acrolein: acetone; acetonitrile; propionitrile; 1,2-dibromo-3-chloropropane; 4-methyl-2-pentanone; naphthalene and isobutyl alcohol. Acrolein, acetonitrile; isobutyl alcohol and propionitrile were ND and had other calibration infractions, and thus should be **qualified UJ**. Acetone was ND and had other calibration infractions and would be qualified UJ, however it was further qualified R due to an intercept infraction. The 1,2-dibromo-3-chloropropane; 4-Methyl-2-pentanone and naphthalene results were ND and no other calibration infractions applied to these compounds, therefore results for these compounds should not be qualified.

The CCV %Ds for sample GU05050GMC401-FTB were >40% but ≤60%, with negative bias, for 2-butanone, vinyl acetate, 2-hexanone, and methacrylonitrile. All associated sample results were ND and should be **qualified UJ**.

The initial calibration for 1,4-dioxane in sample GU05050GMC401 had a response factor (RF) < 0.01. 1,4-Dioxane was detected above the reporting limit in this sample, and should be **qualified J**.

The initial calibration associated with sample GU05050GMC401 had a slope ≥ 0.01 but < 0.05 for isobutyl alcohol. The sample result was ND and should be **qualified UJ**.

The initial calibration associated with sample GU05050GMC401 had a 1,2-dibromomethane intercept that was negative and had an absolute value >3XMDL. The associated sample result for 1,2-dibromomethane was ND and should be **qualified R**.

The CCV %Ds for sample GU05050GMC401 were >20% but ≤40%, with negative bias, for chloromethane; acetone; isobutyl alcohol; 1,2-dibromo-3-chloropropane; acetonitrile; carbon disulfide; 2-butanone; dibromomethane; 4-methyl-2-pentanone; cis-1,3-dichloropropene; trans-1,3-dichloropropene; 2-hexanone; isopropylbenzene; 1,1,2,2-tetrachloroethane; 1,2,3-trichloropropane; n-propylbenzene; naphthalene; vinyl acetate and methacrylonitrile. Isobutyl alcohol was ND, but had a slope infraction for the initial calibration, thus should be **qualified UJ**. All other associated sample results were ND and had no other calibration infractions and, thus should not be qualified.

Blanks

No target analytes were detected in the method blank. Carbon disulfide was detected in the trip blank (GU05050GMC401-FTB). Since all associated field sample results were non-detects for this compound, no sample data should be qualified. No other target analytes were detected in the trip blank.

Surrogates

All surrogate standards met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Laboratory Control Sample (LCS)

As previously noted, the samples in this SDG were assigned to the same batch, but were analyzed on separate instruments under separate calibrations. GEL used the daily CCV associated to each sample as the LCS, therefore, each sample has a different associated LCS and are evaluated as such. All target analytes were included in the LCS. The LCS met QC acceptance criteria with the following exceptions.

The %Rs for the LCS associated with sample GU05050GMC401 were >10% but outside the acceptance limits for dibromomethane, 2-hexanone and methacrylonitrile. These were the only compound failures for the 78 compounds reported; therefore no sample results should be qualified with respect to the LCS for this sample.

The %Rs for the LCS associated with sample GU05050GMC401-FTB were >10% but outside the acceptance limits for allyl chloride, 2-butanone, 2-hexanone, vinyl acetate, and 4-methyl-2-pentanone. These were the only compound failures for the 78 compounds reported; therefore no sample results should be qualified with respect to the LCS for this sample.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met all QC acceptance criteria with the following exceptions. The MSD %R for cis-1,3-dichloropropene was below the lower acceptance limit but > 10%. Cis-1,3-dichloropropene was not detected in either sample in this SDG, thus all associated sample results should be **qualified UJ**. The relative percent difference results were acceptable for all MS/MSD analytes. A sample of a similar matrix from a different SDG from LANL WQH was used for the MS/MSD. No sample results should be

qualified as a result of this. It should be noted that the MS/MSD spike solution did not contain 10 of the target compounds. No sample results should be qualified as a result of this.

Detection Limits/Dilutions

Detection limits were not reported in the data package. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TICs were requested and reported, but not assessed for validation. No TICs were detected.

Other QC

No other specific issues that affect data quality were identified.

Memorandum

Date: 08/03/05

To: William Turney

From: Mark Mensik

Subject: GC/MS Organic Data Review and Validation – LANL WQH
COC: WG-02537-GE
SDG: 139405
Laboratory: GEL
Analysis: VOCs

Data Qualifiers (see following sections for detailed explanations)

Sample GU05050GMC401	The result for 1,4-dioxane should be **qualified J, V7b** due to an initial calibration relative response factor <0.01. The result for isobutyl alcohol should be **qualified UJ, V7b, VWQ9** due to an initial calibration slope <0.05 and continuing calibration verification recovery. The 1,2-dibromoethane result should be **qualified R, VWQ5** due to calibration problems. The result for cis-1,3-dichloropropene should be **qualified UJ, VWQ3** due to low matrix spike duplicate recovery.
Sample GU05050GMC401-FTB	The result for 1,4-dioxane should be **qualified R, V7b** due to a relative response factor <0.01. The result for acetone should be **qualified R, VWQ5, VWQ9** due to calibration problems and continuing calibration verification recovery. The results for acrolein, propionitrile, isobutyl alcohol and acetonitrile should be **qualified UJ, V7b, VWQ9** due to an initial calibration slope or response factor <0.05 and continuing calibration verification recovery. The results for vinyl acetate, 2-hexanone, 2-butanone and methacrylonitrile should be **qualified UJ**, **VWQ9** due to continuing calibration verification recovery. The result for cis-1,3-dichloropropene should be **qualified UJ, VWQ3** due to matrix spike duplicate recovery.

Summary/General Comments

The samples were prepared and analyzed with approved procedures using method SW846 8260B DOE-AL (VOCs). Data were reported for all required analytes.

See attached Data Assessment Worksheets for supporting documentation on the data review and validation.

This validation was performed according to DOE-AL Model Data Validation Procedure Rev. 3.

Sample Shipping/Receiving

All COC, analysis request, and sample receipt documentation was complete and correct with the following exception. The VOC order suite code listed on the COCs for the trip blank was "GW: VOA FTB", while the code listed for the field sample was "WG VOA w/MS+TICs". These codes do not contain identical target analytes. GEL analyzed the trip blank and the field sample based on the "WG VOA w/MS+TICs" order suite code. GEL did not document this discrepancy. No sample data should be qualified based on this discrepancy.

Holding Times and Preservation

The samples were analyzed within the prescribed holding time and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The samples in this SDG were assigned to the same batch, but were analyzed on separate instruments under separate calibrations. All initial and continuing calibration QC acceptance criteria were met with the following exceptions.

The initial calibration for sample GU05050GMC401-FTB had a negative intercept whose absolute value was >3X MDL for acetone. The associated acetone result was non-detect (ND) and should be **qualified R**. The initial calibration for sample GU05050GMC401-FTB had positive intercepts for 1,1dichloroethylene; iodomethane; acetonitrile; 2-butanone; bromoform and 1,2-dibromo-3-chloropropane that were >3X MDL. None of these compounds were detected in this sample and thus should not be qualified.

The initial calibration for 1,4-dioxane associated with sample GU05050GMC401-FTB had a RF < 0.01. The 1,4-Dioxane result was ND for this sample, and should be **qualified R**. The initial calibration associated with sample GU05050GMC401-FTB had slopes or response factors $\geq$ 0.01 but < 0.05 for acrolein, acetonitrile, isobutyl alcohol and propionitrile. All associated sample results were ND for this sample and should be **qualified UJ**.

The continuing calibration verification (CCV) percent differences (%Ds) associated with sample GU05050GMC401-FTB were >20%, with positive bias, for dichlorodifluoromethane and allyl chloride. The associated sample results were ND for these compounds and should not be qualified.

The CCV %Ds associated with sample GU05050GMC401-FTB were >20% but ≤40%, with negative bias, for acrolein: acetone; acetonitrile; propionitrile; 1,2-dibromo-3-chloropropane; 4-methyl-2-pentanone; naphthalene and isobutyl alcohol. Acrolein, acetonitrile; isobutyl alcohol and propionitrile were ND and had other calibration infractions, and thus should be **qualified UJ**. Acetone was ND and had other calibration infractions and would be qualified UJ, however it was further qualified R due to an intercept infraction. The 1,2-dibromo-3-chloropropane; 4-Methyl-2-pentanone and naphthalene results were ND and no other calibration infractions applied to these compounds, therefore results for these compounds should not be qualified.

The CCV %Ds for sample GU05050GMC401-FTB were >40% but ≤60%, with negative bias, for 2-butanone, vinyl acetate, 2-hexanone, and methacrylonitrile. All associated sample results were ND and should be **qualified UJ**.

The initial calibration for 1,4-dioxane in sample GU05050GMC401 had a response factor (RF) < 0.01. 1,4-Dioxane was detected above the reporting limit in this sample, and should be **qualified J**.

The initial calibration associated with sample GU05050GMC401 had a slope ≥ 0.01 but < 0.05 for isobutyl alcohol. The sample result was ND and should be **qualified UJ**.

The CCV %Ds for sample GU05050GMC401 were >20% but ≤40%, with negative bias, for chloromethane; acetone; isobutyl alcohol; 1,2-dibromo-3-chloropropane; acetonitrile; carbon disulfide; 2-butanone; dibromomethane; 4-methyl-2-pentanone; cis-1,3-dichloropropene; trans-1,3-dichloropropene; 2-hexanone; isopropylbenzene; 1,1,2,2-tetrachloroethane; 1,2,3-trichloropropane; n-propylbenzene; naphthalene; vinyl acetate and methacrylonitrile. Isobutyl alcohol was ND, but had a slope infraction for the initial calibration, thus should be **qualified UJ**. All other associated sample results were ND and had no other calibration infractions and, thus should not be qualified.

Blanks

No target analytes were detected in the method blank. Carbon disulfide was detected in the trip blank (GU05050GMC401-FTB). Since all associated field sample results were non-detects for this compound, no sample data should be qualified. No other target analytes were detected in the trip blank.

Surrogates

All surrogate standards met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Laboratory Control Sample (LCS)

As previously noted, the samples in this SDG were assigned to the same batch, but were analyzed on separate instruments under separate calibrations. GEL used the daily CCV associated to each sample as the LCS, therefore, each sample has a different associated LCS and are evaluated as such. All target analytes were included in the LCS. The LCS met QC acceptance criteria with the following exceptions.

The %Rs for the LCS associated with sample GU05050GMC401 were >10% but outside the acceptance limits for dibromomethane, 2-hexanone and methacrylonitrile. These were the only compound failures for the 78 compounds reported; therefore no sample results should be qualified with respect to the LCS for this sample.

The %Rs for the LCS associated with sample GU05050GMC401-FTB were >10% but outside the acceptance limits for allyl chloride, 2-butanone, 2-hexanone, vinyl acetate, and 4-methyl-2-pentanone. These were the only compound failures for the 78 compounds reported; therefore no sample results should be qualified with respect to the LCS for this sample.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met all QC acceptance criteria with the following exceptions. The MSD %R for cis-1,3-dichloropropene was below the lower acceptance limit but > 10%. Cis-1,3-dichloropropene was not detected in either sample in this SDG, thus all associated sample results should be **qualified UJ**. The relative percent difference results were acceptable for all MS/MSD analytes. A sample of a similar matrix from a different SDG from LANL WQH was used for the MS/MSD. No sample results should be qualified as a result of this. It should be noted that the MS/MSD spike solution did not contain 10 of the target compounds. No sample results should be qualified as a result of this.

Detection Limits/Dilutions

Detection limits were not reported in the data package. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TICs were requested and reported, but not assessed for validation. No TICs were detected.

Other QC

No other specific issues that affect data quality were identified.

Memorandum

Date: 08/03/05

To: William Turney

From: Mark Mensik

Subject: GC/MS Organic Data Review and Validation – LANL WQH
COC: WG-02537-GE
SDG: 139405
Laboratory: GEL
Analysis: SVOCs

Data Qualifiers (see following sections for detailed explanations)

Sample GU05050GMC401 The result for benzidine should be **qualified UJ, SWQ1** due to poor replicate precision.

Summary/General Comments

The samples were prepared and analyzed with approved procedures using method EPA 8270C (SVOCs). Data were reported for all required analytes.

See attached Data Assessment Worksheets for supporting documentation on the data review and validation.

This validation was performed according to DOE-AL Model Data Validation Procedure Rev. 3.

Sample Shipping/Receiving

All COC, analysis request, and sample receipt documentation was complete and correct.

Holding Times and Preservation

The samples were analyzed within the prescribed holding time and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration QC acceptance criteria were met with the following exceptions. The initial calibrations for 2,4-dinitrotoluene, 2-methyl-4,6-dinitrophenol, and dinoseb had intercepts >3X the MDLs. All associated sample results were not detected (ND) and should not be qualified.

The CCV %Ds for benzidine; bis(2-chloroethyl)ether; bis(2-chloroisopropyl)ether; 4-chlorophenylpnenylether; and 4-bromophenylpnenylether were >20%, with positive bias. All associated sample results were ND and should not be qualified.

The CCV %Ds for benzoic acid and dinoseb were >20% but ≤ 40%, with negative bias. All associated sample results were ND and no other calibration infractions occurred, thus the associated sample results should not be qualified.

Blanks

No target analytes were detected in the method blank.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria with the following exception. The %R for hexachlorocyclopentadiene was >10% but less than the lower acceptance limit. This was the only compound failure for the 72 compounds reported; therefore no sample results should be qualified.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met all QC acceptance criteria with the following exceptions. The benzidine MS %R and the 1,2-diphenylhydrazine MSD %R were above the upper acceptance limits. The associated sample results were ND and thus should not be qualified with respect to the spike recoveries. The relative percent difference (RPD) for the MS/MSD was above the acceptance limits for benzidine. The associated sample result was ND and thus should be **qualified UJ**. A sample of a similar matrix from a different SDG from LANL WQH was used for the MS/MSD. No sample results should be qualified as a result of this.

Detection Limits/Dilutions

Detection limits were not reported in the data package. The sample was not diluted.

Tentatively Identified Compounds (TICs)

TICs were requested and reported, but not assessed for validation.

Other QC

Gel permeation chromatography (GPC) cleanup was not performed. No sample results were qualified as a result of this.

Dinoseb was not present in the LCS or MS/MSD samples. No sample results were qualified as a result of this. No other specific issues that affect data quality were identified.

Memorandum

Date: 08/03/05

To: William Turney

From: Mark Mensik

Subject: Radiochemical Data Review and Validation – LANL ESH
COC: WG-02537-GE
SDG: 139405
Laboratory: GEL
Analysis: Isotopic-Am, -Pu, -U; Sr-90; gamma spec; gross alpha/beta; tritium; Ra-226; Tc-99

Data Qualifiers (see following sections for detailed explanations)

Sample GF05050GMC401	The results for alpha spectrometry analytes Am-241, Pu-238, Pu-239/240, U-235/236 and U-238; gross alpha/beta; Sr-90; Ra-226; and all gamma spectroscopy analytes should be **qualified BD, R5** due to reported values < the MDC or 2-sigma TPU. The result for alpha spectrometry analyte U-234 should be **qualified J, RWQ2, R7** due to reported values <3 times the MDC and lack of matrix-specific precision data.
Sample GU05050GMC401	The results for alpha spectrometry analytes Am-241, Pu-238, Pu-239/240, U-235/236 and U-238; gross alpha; Sr-90; Tc-99 and all gamma spectroscopy analytes should be **qualified BD, R5** due to reported values < the MDC or 2-sigma TPU. The results for alpha spectrometry analyte U-234 and gross beta should be **qualified J, RWQ2** due to reported values <3X the MDC.

Summary/General Comments

The samples were prepared and analyzed with approved procedures using methods EPA 900.0 (Gross Alpha/Beta), EPA 901.1 (Gamma Spectroscopy), EPA 903.1 (Ra-226), EPA 905.0 (Sr-90), EPA 906.0 (Tritium), DOE EML HASL-300 Tc-02-RC Modified (Tc-99), and DOE EML HASL-300 (Isotopic-Am, -Pu, and -U). Data were reported for all required analytes.

It should be noted that client sample identification numbers beginning with GF and GU indicate samples that are filtered and unfiltered respectively. For the purposes of data validation, these sample types are considered to be separate matrices.

See attached Data Assessment Worksheets for supporting documentation on the data review and validation.

This data validation was performed according to DOE-AL Model Data Validation Procedure, Rev. 3.

Sample Shipping/Receiving

All COC, analysis request, and sample receipt documentation was complete and correct.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

The case narratives stated that the instruments used were properly calibrated.

Quantification

All sample results which were < the associated 2-sigma total propagated uncertainty (TPU) and/or < the associated minimal detectable concentration (MDC) should be **qualified BD**. All sample results which were <3X the associated MDC should be **qualified J**.

Blanks

No target analytes were detected in the method blanks at concentrations > the MDC and 2-sigma TPU.

Tracer/Carrier Recovery

All tracer/carrier recoveries met QC acceptance criteria.

Laboratory Control Sample

All LCS recoveries met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met all QC acceptance criteria where a matrix spike is required. It should be noted that matrix QC samples were performed on LANL WQH samples of a similar matrix from another SDG. The matrix spike analyses for gross alpha, gross beta and Sr-90 were performed on unfiltered samples only. All associated results for sample GF05050GMC401 were previously qualified BD and should not be further qualified. The matrix spike analysis for Ra-226 was performed on a filtered sample only. The Ra-226 result for sample GU05050GMC401 was previously qualified BD and should not be further qualified.

Laboratory Replicate

All replicate acceptance criteria were met with the following exceptions.

The replicate analyses for all alpha spectrometry analytes, Gross A/B and Sr-90 were performed on unfiltered samples from other LANL SDGs, thus these analytes do not have matrix specific QC for the filtered sample. The results for alpha spectrometry analytes Am-241, Pu-238, Pu-239/240, U-235/236 and U-238; Gross A/B and Sr-90 were previously qualified BD (see Quantification section) for the filtered sample (GF05050GMC401) and no further qualifiers should be applied to these results. Alpha spectrometry analyte U-234 was detected in sample GF05050GMC401 and should be **qualified J** due to lack of matrix-specific precision information. The replicate analyses for Ra-226 were performed on a filtered sample from another LANL SDG, thus this analyte does not have matrix specific QC for the unfiltered sample. The Ra-226 result for sample GU05050GMC401 was previously qualified BD (see Quantification section) and should not be further qualified.

The replicate analyses for gamma spectroscopy were performed on filtered samples from other LANL SDGs, thus these analytes do not have matrix specific QC for the unfiltered sample. All gamma

spectroscopy results had been previously qualified BD (see Quantification section) for the unfiltered sample (GU05050GMC401) and no further qualifiers should be applied to the results.

It should be noted that for all other analytes the matrix QC samples were performed on LANL WQH samples of similar matrix from another SDG.

Detection Limits/Dilutions

The required detection limits were met for all analytes and all detection limits were properly reported. The samples were not diluted.

Other QC

The gross alpha/beta planchets were counted for beta activity before being flamed. After flaming, the planchets were counted for alpha activity. No sample data should be qualified based on this. No other specific issues that affect data quality were identified.

Memorandum

Date: 08/03/05

To: William Turney

From: Mark Mensik

Subject: Inorganic Data Review and Validation – LANL WQH
COC: WG-02537-GE
SDG: 139405
Laboratory: GEL
Analysis: Metals

Data Qualifiers (see following sections for detailed explanations)

All Samples	The results for B should be **qualified U, I4a** due to blank contamination. The results for silica should be **qualified J, I14b** due to lack of matrix accuracy information.
Sample GU05050GMC401	The results for Al, Cr, Fe and Ni should be **qualified J, I10** due to poor replicate precision.

Summary/General Comments

The samples were prepared and analyzed with approved procedures using methods SW846 6010B (ICP-AES), SW846 6020 (ICP-MS) and SW846 7470A (CVAA). Data were reported for all required analytes.

See the attached Data Assessment Worksheets for supporting documentation on the data review and validation.

This validation was performed according to DOE-AL Model Data Validation Procedure Rev. 3.

Sample Shipping/Receiving

All COC, analysis request, and sample receipt documentation was complete and correct.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

ICP-MS Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration QC acceptance criteria were met.

Blanks

B, Sn and Mo were detected in one or more of the blanks at concentration >MDL but <RDL. All associated B results were detects at concentrations <5x the highest associated blank concentration and should be **qualified U.** All associated Sn results were non-detects and should not be qualified. All associated Mo results were >5X the blank concentration and should not be qualified.

Internal Standards

All ICP-MS internal standards intensities met QC acceptance criteria.

ICP Interference Check Sample (ICS A and AB) Analyses

The results of the ICS A and AB analyses were not applicable because the concentrations of Al, Ca, Fe, and Mg in the samples were < those in the ICS solutions. No sample data should be qualified as a result.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria. The silica spike recoveries for both the filtered and unfiltered matrices were NA due to sample results >4X the spike added. All silica results were detects and should be qualified J due to lack of matrix accuracy information.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria with the following exceptions. The concentrations of Al and Ni were > RDL, but <5X the RDL for sample GU05050GMC401. The absolute difference between the sample and the replicate was >RDL, therefore Al and Ni should be **qualified J** for sample GU05050GMC401.

The concentrations of Cr and Fe were >5X the RDL for sample GU05050GMC401. The relative percent difference (RPD) was >20% between the sample and the replicate, therefore Cr and Fe should be **qualified J** for sample GU05050GMC401.

ICP Serial Dilution

The serial dilution (SD) analyses met all QC acceptance criteria.

Reporting Limit Verification

All CRA/CRI recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were diluted by a factor of 5 for SiO_2. No other dilutions were required.

Other QC

No other specific issues that affect data quality were identified.

To: William Turney

From: Mark Mensik

Subject: Inorganic Data Review and Validation – LANL ESH
COC: WG-02537-GE
SDG: 139405
Laboratory: GEL
Analysis: General Chemistry

Data Qualifiers (see following sections for detailed explanations)

Sample GU05050GMC401	The result for pH should be **qualified J, I9** due to analysis performed outside 2X the holding time. The result for TOC should be **qualified J-, IWQ6** due to calibration problems. The result for TKN should be **qualified NJ-**, **IWQ2** due to an associated negative blank. The result for Total Phosphorus should be **qualified U**, **I4a** due to blank contamination.
Sample GF05050GMC401	The result for pH should be **qualified J, I9** due to analysis performed outside 2X the holding time. The result for Total Phosphorus should be **qualified U, I4a** due to blank contamination. The result for perchlorate should be **qualified J-, I16c** due to low initial calibration recovery.

Summary/General Comments

The samples were prepared and analyzed with approved procedures using methods EPA 300.0 (Ion Chromatography-Bromide, Chloride, Fluoride, Sulfate), EPA 310.1 (Total Alkalinity and Carbonate), EPA 314.0 (Perchlorate), EPA 351.2 (TKN), EPA 353.1 (Nitrate/Nitrite), EPA 365.4 (Total Phosphorus), SW846 9060 (Total Organic Carbon), SW846 9050A (Conductivity), EPA 150.1 (pH), SW846 9012A (Total Cyanide), EPA 160.1 (TDS), EPA 160.2 (TSS) and SM2430B (Hardness). Data were reported for all required analytes.

It should be noted that client sample identification numbers beginning with GF and GU indicate samples that are filtered and unfiltered respectively. For the purposes of data validation, these sample types are considered to be separate matrices.

See the attached Data Assessment Worksheets for supporting documentation on the data review and validation. This validation was performed according to DOE-AL Model Data Validation Procedure Rev. 3.

Sample Shipping/Receiving

All COC, analysis request, and sample receipt documentation was complete and correct.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved with the following exceptions. The pH analysis for all samples was performed beyond 2X the method specified holding time. The associated sample results should be **qualified J**.

Calibration

All initial and continuing calibration QC acceptance criteria were met with the following exceptions. The initial calibrations for TOC had a negative intercept with an absolute value >3X the MDL. The TOC result for sample GU05050GMC401 was detected at <3X the absolute value of the negative intercept, and should be **qualified J-**. The initial calibration for sulfate had an intercept >3X the MDL. All associated sulfate results were >3X the intercept value and should not be qualified.

The initial calibration verification recovery for perchlorate recovered <75%. The perchlorate result for sample GF05050GMC401 should be **qualified J-**.

Blanks

Total phosphorus was detected in one or more of the blanks at concentrations > the MDL. All associated total phosphorous results were <5X the highest blank concentration and should be **qualified U**.

TKN and TOC had negative blank results whose absolute values were > the MDL. The associated TOC result was >5XMDL and should not be qualified. All associated TKN results were <5XMDL and should be **qualified NJ-**.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria. It should be noted that the matrix spike analyses for total cyanide and perchlorate were performed on samples of similar matrix from other LANL WQH SDGs. No sample results should be qualified as a result of this.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria. It should be noted that the replicate analyses for total cyanide and perchlorate were performed on samples of similar matrix from other LANL WQH SDGs. No sample results should be qualified as a result of this.

Detection Limits/Dilutions

All detection limits were properly reported. The samples required dilutions for the following analyses in all samples for which the test was requested. Nitrate/nitrite required a 10X dilution and perchlorate and chloride each required a 2X dilution.

Other QC

No other specific issues that affect data quality were identified.

Memorandum

Date: 08/03/05

To: William Turney

From: Mark Mensik

Subject: LC/MS/MS Organic Data Review and Validation – LANL WQH
COC: WG-02537-GE
SDG: 139405
Laboratory: GEL
Analysis: Perchlorate

Data Qualifiers (see following sections for detailed explanations)

GF05050GMC401 The perchlorate result should be **qualified J, LMS1** due to lack of matrix information.

Summary/General Comments

The samples were prepared and analyzed with approved procedures using method EPA 8321A Modified (perchlorate by LC/MS/MS). Data were reported for all required analytes.

See attached Data Assessment Worksheets for supporting documentation on the data review and validation.

This validation was performed according to DOE-AL Model Data Validation Procedure (MDVP) Rev. 3.

Sample Shipping/Receiving

All COC, analysis request, and sample receipt documentation was complete and correct.

Holding Times and Preservation

The samples were analyzed within the prescribed holding time and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration QC acceptance criteria were met.

Blanks

No target analytes were detected in any of the blanks.

Reporting Limit Verification (CRI)

The CRI percent recovery met QC acceptance criteria. It should be noted that the CRI spiked concentration was at the RDL, not 2X the RDL as stated in the MDVP. No sample data should be qualified as a result.

Internal Standard

Internal standard retention time acceptance criteria were met for perchlorate-O(18). Recovery of perchlorate-O(18) met matrix spike recovery acceptance criteria.

Laboratory Control Sample (LCS)

The LCS recovery met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

A sample from a different LANL WQH SDG was used for the MS/MSD. This sample was analyzed undiluted. For sample GF05050GMC401 a 200X dilution was necessary to obtain a concentration within the linear range of the instrument. The quality control sample is considered a dissimilar matrix to sample GF05050GMC401 due to the relative difference in dilution factors. The perchlorate result for sample GF05050GMC401 should be **qualified J** due to matrix QC analysis on a dissimilar matrix.

Detection Limits/Dilutions

All detection limits were properly reported. The sample in this SDG was diluted by a factor of 200.

Perchlorate Chlorine Ratios

The sample ratios met QC acceptance criteria.

Interference Check Standard (ICS)

The ICS recovery met QC acceptance criteria.

Other QC

No other specific issues that affect data quality were identified.

GENERAL NARRATIVE

CASE NARRATIVE
for
Los Alamos National Laboratory
ESH-18
SDG 139405
Chain of Custody WG-02537-GE

July 13, 2005

Laboratory Identification:

General Engineering Laboratories, LLC

Mailing Address:

P.O. Box 30712
Charleston, South Carolina 29417

Express Mail Delivery and Shipping Address:

2040 Savage Road
Charleston, South Carolina 29407

Telephone Number:

(843) 556-8171

Summary:

Sample receipt

The samples for Los Alamos National Laboratory for ESH-18 arrived at General Engineering Laboratories, LLC, (GEL) Charleston, South Carolina on June 25, 2005 for environmental analyses. All sample containers arrived without any visible signs of tampering. The sample containers were delivered with chain of custody documentation and signatures. The sample containers were received at 3°C, 4°C, 19°C and 20°C temperature.

The laboratory received the following samples:

Laboratory Identification	Sample Description
139405001	GF05050GMC401
139405002	GU05050GMC401
139405003	GU05050GMC401-FTB

Internal Chain of Custody:

Custody was maintained for the samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Chain of Custody, Cooler Receipt Checklist, Data Review Qualifier Flag Sheet, Volatiles, Semi-Volatiles, Perchlorate by LC-MS/MS, Metals, General Chemistry, and Radiochemistry Analysis.

I certify that this data report is in compliance with the terms and conditions of the subcontract and task order, both technically and for completeness, for other than the conditions detailed in the attached case narratives.

DATA REVIEW QUALIFIER FLAG DEFINITION SHEET

General Engineering Laboratories, LLC

DATA QUALIFIERS FOR ORGANIC ANALYSES

Data Qualifiers used on Form 1s or Certificates of Analysis (COA) follow the specifications set forth in the technical specifications of the most current CLP Statement of Work and are defined as follows:

Section	Explanation	Location
A	The TIC is suspected aldol-condensation product.	COA, Form 1, and EDD
B	Analyte was detected in the associated method blank as well as in the sample.	COA, Form 1, and EDD
C	Pesticide analyte has been confirmed by GC/MS.	COA, Form 1, and EDD
D	Analyte(s) quantified in an analysis performed at a secondary dilution factor.	COA, Form 1, and EDD
E	Identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.	COA, Form 1, and EDD
J	This flag indicates an estimated value concerning either, (1) estimating a concentration for tentatively identified compounds (TICs), or (2) analyte detected at a level less than the RDL or PQL and greater than or equal to the MDL.	COA, Form 1, and EDD
N	Presumptive evidence based upon a mass spectral library search to make a tentative identification of the analyte.	COA, Form 1, and EDD
NJ	Analyte has been tentatively identified and the associated numerical value is estimated based upon 1:1 response factor to the nearest eluting internal standard.	COA, Form 1, and EDD
P	- Pesticide/PCB target analyte that is greater than 25% difference for the detected concentrations between the two GC columns. - HPLC target analyte that is greater than 40% difference for the detected concentrations between detectors or columns.	Form 1 and EDD
U	Compound analyzed for but not detected (sample quantitation limit has been adjusted to reflect dilutions and percent moisture).	COA, Form 1, and EDD
X	Other reporting flag as defined in report narrative.	COA, Form 1, and EDD
**	Laboratory Control Sample recovery outside of acceptance limit.	QC Summary Report

All surrogate recoveries and acceptance ranges are reported at the bottom of Form 2 or COA.

General Engineering Laboratories, LLC

DATA QUALIFIERS FOR INORGANIC ANALYSES

Data Qualifiers used on Form 1s or Certificates of Analysis (COA) follow the specifications set forth in the technical specifications of the most current CLP Statement of Work and are defined as follows:

Section	Explanation	Location
E	The qualifier that is used when the percent difference between the parent sample and its serial dilution's concentration exceeds 10%. The sample's concentration must be greater than 50 times the IDL/MDL for ICP or 100 times the absolute value of the preparation blank's concentration for ICP-MS. However, if analyzing ILMO 4.0 (ICP-MS), the parent sample's concentration must be 20 times the CRDL before the "E" flag is applied.	Form 1 and EDD
*	The qualifier that is used to indicate the duplicate sample analysis for an analyte is out of control.	Form 1 and EDD
J	The qualifier is used to indicate that the reported result fell above the IDL/MDL but below the CRDL.	Form 1 and EDD
N	This qualifier is used to indicate that the matrix or pre-digested spike sample recovery for an analyte is not within the specified control limit.	Form 1 and EDD
U	Analyte analyzed for but not detected above the PQL/CRDL.	COA, Form 1, and EDD
X	Other reporting flag as defined in report narrative.	Form 1 and EDD
**	Laboratory Control Sample (LCS) recovery for an analyte is outside of specified acceptance limit.	QC Summary Report

All surrogate recoveries and acceptance ranges are reported at the bottom of Form 2 or COA.
Any recoveries falling outside the acceptance range will be flagged with a **.
All flags do not apply to QC Summary and Certificate of Analysis packages.

GC/MS VOLATILE ANALYSIS

GC/MS Volatile Organics
Los Alamos National Laboratory (ESHL)
SDG 139405

Method/Analysis Information

Procedure:	Volatile Organic Compounds (VOC) by Gas Chromatography/Mass Spectrometer
Analytical Method:	SW846 8260B DOE-AL
Prep Method:	SW846 5030B
Analytical Batch Number:	439994

Sample Analysis

The following client and quality control samples were analyzed to complete this SDG using the methods referenced in the Analysis Information section:

Sample ID	Client ID
139405002	GU05050GMC401
139405003	GU05050GMC401-FTB
1200881394	Method Blank (MB)
1200881397	Laboratory Control Sample (LCS)
1200881398	Laboratory Control Sample (LCS)
1200889456	Method Blank (MB)
1200889457	Laboratory Control Sample (LCS)
1200889458	Laboratory Control Sample (LCS)
1200881395	139349008(GU05060PCCR01) Matrix Spike (MS)
1200881396	139349008(GU05060PCCR01) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV# 9.

Calibration Information

Due to the limited capacity of software all of the current initial calibration files are not displayed here. If necessary, a calibration history will be inserted in the package prior to the appropriate Form 6.

Initial Calibration
All initial calibration requirements have been met for this sample delivery groups (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

Continuing Calibration Verification Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
Surrogate recoveries, in all samples and quality control samples were within the acceptance limits.

Laboratory Control Sample (LCS) Recovery
VBLK01LCS recoveries were not all within the acceptance limits. However, the failures were less than 5% of the requested analyte list. This satisfies the client criteria. VBLK02LCS recoveries were not within the acceptance limits. Due to lack of sample availability, the data for this LCS and its associated blank and sample are reported. The client was notified. See NCR 220344.

QC Sample Designation
Sample 139349008(GU05060PCCR01) was designated for spike analysis.

Matrix Spike (MS) Recovery Statement
The MS recoveries were within the required acceptance limits.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries were not within the required acceptance limits. The failures were less than 5% of the requested analyte list. This satisfies the client criteria. See NCR 220344.

MS/MSD Relative Percent Difference (RPD) Statement
The RPD(s) between the MS and MSD met the acceptance limits.

Internal Standard (ISTD) Acceptance
The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Sample Preservation and Integrity
All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Miscellaneous Information

Electronic Package Comment
The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:
Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation
NCR # 220344 was generated for this SDG.

Manual Integrations
Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment
Tentatively identified compounds (TIC) were required for this SDG.

Additional Comments
Additional comments were not required for this SDG.

System Configuration

The Volatile-GC/MS analysis was performed on a Volatile Organic Analysis by Gas Chromatography/Mass Spectroscopy.

The Volatile-GC/MS analysis was performed on a HP Mass Spectrometer.

Instrument ID	System Configuration	Column ID	Column Description	P & T Trap
VOA1.I	HP6890/HP5973	RESTEK	RTX-Volatiles, 30m x 0.25 mm, 1.0um	Trap 10
VOA3.I	HP6890/HP5973	J&W1	DB-624, 60m x 0.25mm, 1.4um	Trap 10

Certification Statement

When the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Erin Lambert Date: 7/18/05

Roadmap for ESHL 139405 VOA

This roadmap was analyzed by Patricia Murphy on 07-14-2005, 09:31.
This roadmap was reviewed by Patricia Murphy on 07-18-2005, 13:50.
This roadmap was reviewed by Erin Haubert on 07-18-2005, 15:11.
This roadmap was packaged by LySandra Gathers on 07-18-2005, 15:53.
This roadmap was validated by Erin Haubert on 07-18-2005, 16:33.
This roadmap was validated by Erin Haubert on 07-18-2005, 16:47.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.

COMPANY – WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
13–JUL–05	Federal	Specifications	Process
Instrument Type:	**Test / Method:**	**Matrix Type:**	**Client Code:**
VOA GC/MS	SW846 8260B DOE–AL	Liquid	ESHL
Batch ID:	**Sample Numbers:**		
439994	See Below		

Potentially affected work order(s)(SDG): 139349,139405

Application Issues:

Failed Recovery for MS/PS

Failed Recovery for LCS/LCSD

Specification and Requirements Nonconformance Description:	NRG Disposition:
VBLK02LCS recoveries analyzed on VOA 1 were not all within the acceptance limits.	The LCS recoveries were outside the of client acceptance limits. The client was contacted. Due to lack of sample availability the data results are reported.
VBLK02LCS and MSD recoveries analyzed on VOA 3 were not all within the acceptance limits.	The failures were not within the acceptance limits. However, the failures were less than 5% of the requested analyte lists. This satisfes the client criteria.

Originator's Name:

GC/MS SEMIVOLATILE ANALYSIS

Semi-Volatile Case Narrative
Los Alamos National Laboratory (ESHL)
SDG 139405

Method/Analysis Information

Procedure:	**Semi-volatile Analysis by Gas Chromatograph/Mass Spectrometer**
Analytical Method:	SW846 8270C
Prep Method:	SW846 3510C
Analytical Batch Number:	437183
Prep Batch Number:	437182

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8270C:

Sample ID	Client ID
139405002	GU05050GMC401
1200874922	Method Blank (MB)
1200874923	Laboratory Control Sample (LCS)
1200874936	139406004(GU0506G32R101) Matrix Spike (MS)
1200874938	139406004(GU0506G32R101) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, LLC (GEL) as Standard Operating Procedure (SOP) GL-OA-E-009, Rev. 14.

Calibration Information

Due to software limitations, the files displayed at the beginning of the Form 6 are only the last files uploaded for each individual level. A complete listing of all files used in the current ICAL are shown on the Calibration History that is included with each Level 4 or higher package. The last file by date in each level is the one currently uploaded for that level.

Diphenylamine has now superseded N-Nitroso-diphenylamine as a CCC on Quantitation Reports, Initial Calibration

Reports, Calibration Check Standard Reports, etc. Previous versions of EPA Method 8270 (prior to 8270C) listed N-Nitroso-diphenylamine as a CCC. However, as stated in EPA Method 8270C, Revision 3, December, 1996, Section 1.4.5, "N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine." Studies of these two compounds at GEL, both independent of each other and together, show that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine will be reported as Diphenylamine on all reports and forms.

When calibrations are performed for Appendix IX compounds some of the compounds may not be calibrated exactly according to the criteria in Method 8270C. If the %RSD is greater than 15% or the correlation coefficient is less that 0.99 then the analyte is quantitated using the response factor. If the analyte is detected then the sample is re-analyzed for that analyte on an instrument that is compliant with the criteria in the method.

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

CCV Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All the surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery
The LCS fialed recovery for hexachlorocyclepentadiene. The failure is less than 5% of the spiking analytes. See NCR 219602.

QC Sample Designation
Sample 139406004 (GU0506G32R101), form another ESHL SDG, was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike (MS) Recovery Statement
The MS recoveries were not within the acceptance limits for all analytes. The failures were less than 5% of the spiked analytes. This is acceptable per the client.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries were not within the acceptance limits for all analytes. The failures were less than 5% of the spiked analytes. This is acceptable per the client.

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) were not within the acceptance limits. The failures were attributed to laboratory error. The failures were less than 5% of the spiked analytes. This is acceptable per the client.

Internal Standard (ISTD) Acceptance

The internal standard responses were within the required acceptance criteria for all samples and QC.

Technical Information:

Holding Time Specifications
All samples in this SDG met the specified holding time. GEL assigns holding times based on the associated methodology that assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG except for confirmations and/or dilutions.

Miscellaneous Information:

Nonconformance (NCR) Documentation
Nonconformance report 219602 was generated for this SDG.

The LCS failed recovery for Hexachlorocyclopentadiene at 26%; the limits are 27%-72%. The failures were less than 5% of the spiked analytes.

The MS, 1200874936, recoveries were not within the acceptance limits for all analytes. The failures were less than 5% of the spiked analytes. This is acceptable per the client.

The MSD, 1200874938, recoveries were not within the acceptance limits. The failures were less than 5% of the spiked analytes. This is acceptable per the client.

The RPD values for MS/MSD was not within the acceptance limits for multiple spiked analytes. The failures were attributed to laboratory error. The failures were less than 5% of the spiked analytes. This is acceptable per the client.

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations. Please see the raw data in the Miscellaneous Section.

Additional Comments
Additional comments were not required for this SDG.

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually

generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

System Configuration

The laboratory utilizes a HP 6890 Series gas chromatograph and a HP 5973 Mass Selective Detector. The configuration is equipped with the electronic pressure control. All MS interfaces are capillary direct.

Chromatographic Columns

Chromatographic separation of semi-volatile components is accomplished through analysis on one or more of the following columns (all with dimensions of 30 meters x 0.25 millimeters ID and 0.25 micron film except J&W DB-5MS2 which is 25 meters x 0.20 mm ID and 0.33 micron film):

Column ID	Column Description
J&W	DB-5.625(5% Phenyl)-methylpolysiloxane (identified by a DB-5.625 designation on quantitation reports and reconstructed ion chromatograms)
J&W DB-5MS	Similar to the J&W DB-5.625 with low bleed characteristics (identified by a DB-5MS designation)
Alltech	EC-5 (SE-54) 5% Phenyl, 95% Methylpolysiloxane (identified by a HP-5MS designation)
HP	HP-5MS 5% Phenylmethylsiloxane (identified by a HP-5MS designation)
Phenomenex	ZB-5 5% Phenyl Polysiloxane (identified by a ZB-5 designation)
J&W DB-5MS2	Similar to the J&W DB-5.625 with low bleed characteristics (identified by a DB-5MS2 designation)

Instrument Configuration

The samples reported in this SDG were analyzed on one or more of the following instrument systems. Instrument systems are referenced in the raw data and individual form headers by the Instrument ID designations listed below:

The Semi-Volatiles-GC/MS analysis was performed on a HP Mass Spectrometer.

Instrument ID	System Configuration	Column ID	Column Description

MSD6.I	HP6890/HP5973	DB-5MS	25m x 0.20mm x 0.33 um (5% Phenylmethylpolysiloxane)

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

QC Flag Legend

T - Target compound detected outside RT window.
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
R - Spike/Surrogate failed recovery limits.
H - Operator selected an alternate compound hit.

Comments:

Samples ending in # 9006, 9006 MS and MSD, 9007, 9004, and 9004 MS MSD were all emulsive in both the acid and base phases of the extraction.

Samples ending in # 95001−95005, and 95001 MS MSD were all emulsive during the base phase of the extraction.

Final Solvent: CH2Cl2

Application Issues:

Failed Recovery for MS/PS

Failed RPD for MS/MSD, or PS/PSD

Failed Recovery for LCS/LCSD

Specification and Requirements Nonconformance Description:	NRG Disposition:
1. The LCS failed recovery for Hexachlorocyclopentadiene at 26%; the limits are 27%–72%.	1. The failures were less than 5% of the spiked analytes. This is acceptable per ESHL and CAST.
2. The MS, 1200874932, recoveries were not within the acceptance limits.	2. The failures were confirmed by the MSD and were attributed to matrix interferences in the sample.
3. The MSD, 1200874933, recoveries were not within the acceptance limits.	3. The failures were confirmed by the MS and were attributed to matrix interferences in the sample.
4. The MS recoveries, 1200874937, were not within the acceptance limits.	4. The failures were confirmed by the MSD and were attributed to matrix interferences in the sample.
5. The MSD, 1200874939, recoveries were not within the acceptance limits.	5. The failures were confirmed by the MSD and were attributed to matrix interferences in the sample.
6. The MS, 1200874936, recoveries were not within the acceptance limits for all analytes.	6. The failures were less than 5% of the spiked analytes. This is acceptable per the client.
7. The MSD, 1200874938, recoveries were not within the acceptance limits.	7. The failures were less than 5% of the spiked analytes. This is acceptable per the client.
8. The RPD values for MS/MSD pairs 1200874932/1200874933, 1200874936/1200874938, and 1200874937/1200874939 were not within the acceptance limits for multiple spiked analytes.	8. The failures were attributed to laboratory error. The failures were less than 5% of the spiked analytes. This is acceptable per the client.

LC/MS/MS PERCHLORATE ANALYSIS

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

Perchlorate by LC/MSMS
Los Alamos National Laboratory (ESHL)
SDG 139405

Method/Analysis Information

Procedure:	**Definitive Low Level Analysis Using Liquid Chromatography/Mass Spectrometry/Mass Spectrometry (LC/MS/MS) By SW-846 Method 8321 Modified (8321M)**
Analytical Method:	SW846 8321A Modified
Prep Method:	SW846 8321A Modified
Analytical Batch Number:	438025
Prep Batch Number:	438024

Sample Analysis

Sample ID	Client ID
139405001	GF05050GMC401
1200876913	Interference Check Sample (ICS)
1200876904	Method Blank (MB)
1200876905	Laboratory Control Sample (LCS)
1200876906	139551001(GF0506G33R201) Matrix Spike (MS)
1200876907	139551001(GF0506G33R201) Matrix Spike Duplicate (MSD)
1200876911	139409001(GF05060PEGR01) Matrix Spike (MS)
1200876912	139409001(GF05060PEGR01) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-056 REV# 6.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this SDG. Due to software constraints, all Initial Calibration Blanks must be designated as IPB001.

CCB Requirements
All continuing calibration blanks (CCB) bracketing the analyses associated with this batch were within acceptance criteria.

Low Level Standard (CRI) Requirements
All low level calibration verification (CRI) requirements were met by all bracketing CRI standards and may be based off of the grand mean average percent recovery of all target analytes.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Interference Check Sample (ICS)
The interference check sample (ICS) met all recovery acceptance criteria.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
A laboratory control sample duplicate (LCSD) was not extracted.

LCS/LCSD Relative Percent Difference (RPD) Statement
A laboratory control sample duplicate (LCSD) was not extracted.

First QC Sample Designation
Sample 139551001 (GF0506G33R201) from SDG 139545-1 was chosen for matrix spike analysis. Please see the raw data in the Miscellaneous Section.

Matrix Spike (MS) Recovery Statement
The matrix spike recoveries were within the established acceptance limits.

Matrix Spike Duplicate (MSD) Recovery Statement
The matrix spike duplicate recoveries were within the established acceptance limits.

MS/MSD Relative Percent Difference (RPD) Statement
The RPD(s) between the MS and MSD met the acceptance limits.

Second QC Sample Designation
Sample 139409001 (GF05060PEGR01) from SDG 139409 was chosen for matrix spike analysis. Please see the raw data in the Miscellaneous Section.

Matrix Spike (MS) Recovery Statement
The matrix spike recoveries were within the established acceptance limits.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

Matrix Spike Duplicate (MSD) Recovery Statement
The matrix spike duplicate recoveries were within the established acceptance limits.

MS/MSD Relative Percent Difference (RPD) Statement
The RPD(s) between the MS and MSD met the acceptance limits.

Retention Time Standard Area Acceptance
The retention time standard areas were within the required acceptance criteria for all samples and QC.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
Sample 139405001 (GF05050GMC401) was diluted due to over range target analytes.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG except for dilutions.

Miscellaneous Information

Nonconformance (NCR) Documentation
A nonconformance report (NCR) was not generated for this SDG.

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations.

Method Comments
The sample was originally analyzed using EPA Method 314.0.

Additional Comments
The Perchlorate Isotope Ratio on the Form I may differ slightly from the ratio on the corresponding raw data due to rounding rules and/or significant figures or due to software limitations when there are manual integrations, dilutions or other factors. The ratio value of the Form I is the correct value.

Due to software limitations, all initial calibration blanks must be designated as IPB001 in order for the forms to be correct.

The retention time marker, Perchlorate-O (18), is added to all samples, instrument blanks, and standards Prior to injection. It is used to verify the retention time of Perchlorate and Perchlorate-101 and to insure an accurate injection occurred. Due to various anions affecting the recovery of Perchlorate-O (18) and not Perchlorate and Perchlorate-101, the calibration curves of Perchlorate and Perchlorate-101 are not internally corrected for using Perchlorate-O (18). They are external calibrations.

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

Perchlorate Isotope Ratio
The Perchlorate isotope ratio met acceptance criteria for all samples and QC samples. Please see the isotope ratio criteria in the Miscellaneous Section.

System Configuration

The laboratory utilizes a liquid chromatography (HPLC) instrument configuration for explosives analyses. The chromatographic hardware system consists of a Waters Model 2795 with programmable gradient pumping and a 50 ul loop injector. The HPLC is coupled to a Micromass Model Quattro Micro MS/MS. The MS/MS is fitted with a negative Electrospray (ES-) interface.

Chromatographic Columns

Chromatographic separation of perchlorate is accomplished through analysis on the following anion column:

Dionex: IonPac AG-16 2 x 50 mm.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Herbert M. Mauer **Date:** 07/15/05

```
;Positive ion monoisotopic and average masses from solution
;of NaI/RbI (2.0/0.05ug/ul) in 50/50 2-propanol/H2O.
;Most useful general purpose calibrant for all low
;MW applications, including MS/MS work.
;At high resolution, readily covers from m/z 50-2000.
;At reduced resolution, can be used to over m/z 3000.
;NOT RECOMMENDED FOR PROTEIN WORK. USE MYO, MYOTRP or TRP.

	Perchlorate Isotope Ratio			2.86			200	05-JUL-05 19:50	per07050044b
14797-73-0	Perchlorate-101	10	40	149	ug/L		200	05-JUL-05 19:50	per07050044b
	Perchlorate-O(18)	0	0	95.2	ug/L		200	05-JUL-05 19:50	per07050044b

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

Perchlorate Initial Calibration

Lab Name: General Engineering Laboratories **GEL Job No.(SDG):** 139405

Lab Code: GEL

Instrument ID: LCMSMS **Date Analyzed:** 05-JUL-05

HPLC Column: Phenomenex Ion Pac AG-16 2 X 50 mm

Calibration Level	1	2	3	4	5
Cal Concentration (ug/L)	0.05	0.1	0.25	0.50	1.0

Parmname Perchlorate-101

Coefficient of Determination: .9995

Calibration Curve: 5296.68X + 0

Response Type: External Standard

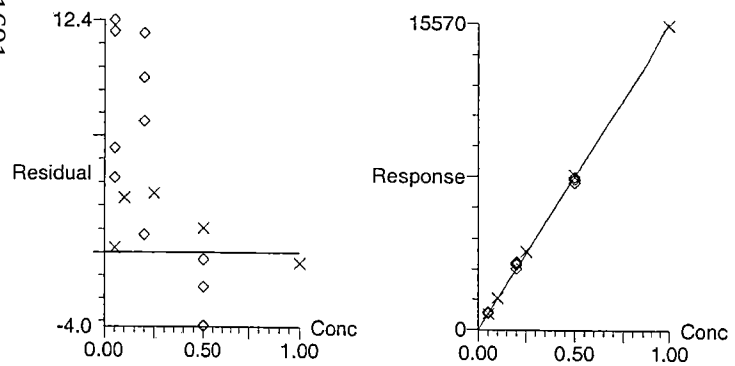
Curve Type: Linear Null

PROPRIETARY INFORMATION - No unauthorized reproduction without written permission from GEL.

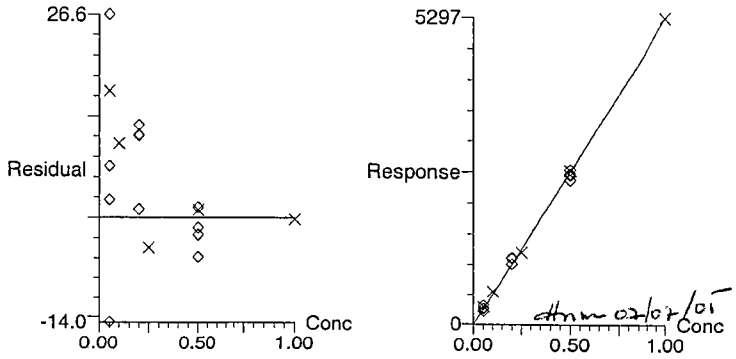
Dataset: C:\Masslynx\Perchlorate.PRO\per070505b1.qld, Time: Tue Jul 05 20:16:33 2005

Method: C:\Masslynx\Perchlorate.PRO\MethDB\per070505b.mdb, Time: Tue Jul 05 15:55:33 2005
Calibration: Untitled, Time: Tue Jul 05 20:15:25 2005

Compound name: Perchlorate
Coefficient of Determination: 0.999765
Calibration curve: 15569.6 * x
Response type: External Std, Area
Curve type: Linear, Origin: Force, Weighting: Null, Axis trans: None



Compound name: Perchlorate-101
Coefficient of Determination: 0.999517
Calibration curve: 5296.68 * x
Response type: External Std, Area
Curve type: Linear, Origin: Force, Weighting: Null, Axis trans: None



MM= Manually Modified

	Perchlorate-O(18)	0	0	0.465	ug/L		1.00	01-JUL-05 21:15	per07010012b

^ When the analyte name is Perchlorate Isotope Ratio the concentration is a unitless value calculated from the ratio of Perchlorate peak area to Perchlorate-101 peak area. The Perchlorate-101 and isotopic ratio results are provided for qualitative purposes only. The results are used to verify the presence and quantitation of Perchlorate.

*Concentration =

$$\text{Instrument Value} \times \frac{\text{Concentrated Extract Volume}}{\text{Aliquot}} \times \frac{1}{\%\text{Solids}}$$

GEL ORGANIC RUN LOG

INSTRUMENT ID: LCMSMS2

Date:070505
Extr. Injection Volume: 50uL
Sequence Number:
Initial Calibration Date:070505

Method:8321A-Modified
Int. Std.:UCL050705-01
Mobile Phase Lot#::278368,316678
Standard-Samp Reagent Lot#::316678

Reviewed BY:_____
Date:_____
SOP: GL-OA-E-056Rev.6

Isotope Ratio Criteria

Average Isotope Ratio
2.93

Standard Deviation
0.19

Sample Between the MDL and RDL (0.050-0.20ug/L)
Control Limits : 2.36-3.50

Sample Above the RDL (0.20ug/L)
Control Limits : 2.55-3.31

Tune Criteria

The tuning solution is introduced directly into the mass spectrometer using the ESI interface in the positive ion mode. The mass range scanned is 20 to 1100 amu using at least six scans. The observed mass for the target compound in the daily calibration standards must be within 0.2 amu of the expected value. If it is greater than 0.2 amu, then a mass calibration is performed and the instrument is re-calibrated.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, LLC. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

System Configuration

The ICP analysis was performed on a P E 4300 Optima radial/axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium or scandium internal standard. Operating conditions for the ICP are set at a power level of 1500 watts. The instrument has a peristaltic pump flow rate of 1.4L/min, argon gas flows of 15 L/min and 0.2 L/min for the torch and auxiliary gases, and a flow setting of 0.65L/min for the nebulizer.

The ICP-MS analysis was performed on a Perkin Elmer ICP-MS ELAN 9000. The instrument is equipped with a cross-flow nebulizer, quadrupole mass spectrometer, and dual mode electron multiplier detector. Internal standards of scandium, germanium, indium, and tantalum were utilized to cover the mass spectrum. Operating conditions are set at 1400W power and combined argon pressures of 360+/-7 kPa for the plasma and auxiliary gases, and 0.85 L/min carrier gas flow, and an initial lens voltage of 5.2.

The Mercury analysis was performed on a Perkin-Elmer Flow Injection Mercury System (FIMS-100) automated mercury analyzer. The instrument consists of a cold vapor atomic absorption spectrometer set to detect mercury at a wavelength of 254 nm. Sample introduction through the flow injection system is performed via a peristaltic pump at 9 mL/min and nitrogen carrier gas rate of 80mL/min.

The analysis was performed on a No instrument-calculation method..

Calibration Information

Instrument Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

CRDL Requirements
All CRDL standard(s) met the referenced advisory control limits.

Continuing Calibration Blank (CCB) Requirements
All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria for all applicable analytes.

Continuing Calibration Verification (CCV) Requirements
All continuing calibration verifications (CCV) bracketing this SDG met the acceptance criteria.

ICSA/ICSAB statement
All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MBs analyzed with this SDG met the acceptance criteria.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Quality Control (QC) Sample Statement
Samples 139405001 (GF05050GMC401) and 139405002 (GU05050GMC401) were selected as the quality control (QC) samples for this SDG.

Matrix Spike (MS) Recovery Statement
The percent recoveries (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. All applicable elements met the acceptance criteria.

Duplicate Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is 5X the contract required detection limit (RL). In cases were either the sample or duplicate value is less than 5X the contract required detection limit (RL), a control of +/-RL is used to evaluate the DUP results. All applicable analytes did not meet these requirements. Cr, Fe, and Ni in batch 437221 did not meet acceptance criteria due to possible sample non-homogeneity. See NCR #216466 located in the Miscellaneous Section.

Serial Dilution % Difference Statement
The serial dilution is used to assess matrix suppression or enhancement. Raw element concentrations that are 25X the IDL for CVAA, 50X the IDL for ICP, and 100X the IDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria of less than 10% difference (%D).

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Re-prep/Re-analysis
No samples in this SDG required repreparation and/or reanalysis.

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Sample Dilutions
Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in soil samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. The samples in this SDG did not require dilutions.

Preparation Information
The samples in this SDG were prepared exactly according to the cited SOP.

Miscellaneous Information

Nonconformance Documentation
Nonconformance reports are generated to document any procedural anomalies that may deviate from referenced SOP or contractual documents. NCR #216466 was generated for this SDG. A copy is included in the Miscellaneous Data section of this package.

Additional Comments
Additional comments were not required for this SDG.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: [signature] for GWH **Date:** 7/15/05

Duplicate Sample Summary

SDG No.: 139405

Contract: ESHL00701 **Lab Code:** GEL

Matrix: LIQUID **Level:** Low **Client ID:** GF05050GMC401D

Sample ID: 139405001 **Duplicate ID:** 1200875070 **Percent Solids for Dup:** N/A

Analyte	Units	Acceptance Limit	Sample Result	C	Duplicate Result	C	RPD	Qual	M
Antimony	ug/L		0.5	U	0.5	U			MS
Beryllium	ug/L		0.1	U	0.1	U			MS
Cadmium	ug/L		0.135	J	0.1	U	200		MS
Lead	ug/L		0.5	U	0.5	U			MS
Manganese	ug/L	+/–5	15.9		16.1		1.27		MS
Molybdenum	ug/L	+/–.5	1.42		1.45		1.96		MS
Thallium	ug/L		0.4	U	0.4	U			MS
