Electronic Packaging Comment
This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:
Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-086 REV# 17.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by GEL Laboratories, LLC. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The Ion Chromatography analysis was performed on a Dionex ICS-3000 Ion Chromatograph.

Initial Calibration

All initial calibration requirements have been met for this SDG.

Continuing Calibration Blanks
All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)
All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Y Intercept Rule
The absolute value of the intercept is less than 3 times the MDL.

Quality Control (QC) Information

Duplicate Relative Percent Difference (RPD) Statement
The RPD between the sample and its duplicate met the acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times
All samples in this SDG met the specified holding time.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-analysis
The samples in this SDG did not require re-analysis.

Miscellaneous Information

Data Exception (DER) Documentation
The following DER was generated for this SDG: 811593 1202079401 (RE46-10-13553) and 1202079403 (RE46-10-13553).

Manual Integrations
Manual integrations were not required for the samples in this SDG.

Additional Comments
Additional comments were not required for this SDG.

Electronic Packaging Comment
This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:
Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

- A The TIC is a suspected aldol-condensation product

QC Summary

Workorder: 248814

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

B	For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD	Results are either below the MDC or tracer recovery is low
C	Analyte has been confirmed by GC/MS analysis
D	Results are reported from a diluted aliquot of the sample
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
E	Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E	Organics--Concentration of the target analyte exceeds the instrument calibration range
F	Estimated Value
H	Analytical holding time was exceeded
J	Value is estimated
M	M if above MDC and less than LLD
M	Matrix Related Failure
N	Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P	Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R	Sample results are rejected
U	Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI	Gamma Spectroscopy--Uncertain identification
UJ	Gamma Spectroscopy--Uncertain identification
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y	QC Samples were not spiked with this compound
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
h	Preparation or preservation holding time was exceeded

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. Samples RE46-10-13551, -13546, and -13547 were reanalyzed at a dilution due to the presence of target analytes at concentrations exceeding calibration range, and both sets of data were reported. The diluted re-analyses were distinguished from the original analyses by the laboratory with an -REDL suffix. The 1,1,1-trichloroethane results for samples -13551 and -13546, and the trichloroethylene and tetrachloroethylene results for samples -13551, -13546, and -13547 from the original analyses were detects that exceeded the calibration range and, thus, were qualified R,V7. All results from the re-analyses of these samples except the 1,1,1-trichloroethane results for samples -13551REDL and -13546REDL, and the trichloroethylene and tetrachloroethylene results for samples -13551REDL, -13546REDL, and -13547REDL that were detects were qualified J,V88. All re-analysis results that were NDs were qualified UJ,V88.
2. Acetone was detected in FTB sample -13555, associated with samples -13549, -13548, -13546, and -13547. The associated acetone sample results were detects >10X the FTB concentration and, thus, were not qualified.
3. Samples -13550, -13551REDL, -13546REDL, and -13547REDL, were analyzed past the method prescribed HT but within 2X the HT. The associated sample results that were detects were qualified J-,V9, and the associated sample results that were NDs were qualified UJ,V9.
4. The %Ds were >20% for trichlorofluoromethane; 2,2-dichloropropane; 1,1,1-trichloroethane; carbon tetrachloride; and bromodichloromethane for the CCV associated with samples -13555, -13553, -13549, -13551, -13546, and -13547. The %Ds were >20% for chloromethane; acetone; 2-butanone; 4-methyl-2-pentanone; and 2-hexanone for the CCV associated with samples -13548, -13556, and -13552. The %Ds were >20% for trichlorofluoromethane; acetone; 2-butanone; 2,2-dichloropropane; 1,1,1-trichloroethane; carbon tetrachloride; and 2-hexanone for the CCV associated with sample -13550, -13551REDL, -13546REDL, and -13547REDL. The acetone results for samples -13550, -13548, -13552, and -13556; the 1,1,1-trichloroethane results for samples -13549, -13551REDL, -13550,-

13546REDL, and -13547; and the carbon tetrachloride results for samples -13551 and -13546 were detects and, thus, were qualified J,V7c. The remaining associated sample results were NDs and, thus, were qualified UJ,V7c.

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. Sample RE46-10-13548 was re-extracted beyond the method prescribed HT but within 2X the HT due to low surrogate %Rs and both sets of data were reported. The original extraction/analysis was selected for validation based on professional judgment. The 2-methylnaphthalene and bis(2-ethylhexyl)phthalate results for sample -15348RE were detects and, thus, were qualified J,SV88. The remaining associated sample results were NDs and, thus, were qualified UJ,SV88.
2. The %Ds were >20% for pyridine; bis(2-chloroisopropyl)ether; benzyl alcohol; and 2-methyl-4,6-dinitrophenol for ICV and/or CCVs associated with all samples. The %Ds were also >20% for 2,4-dimethylphenol; benzoic acid; 3-nitroaniline; 2,4-dinitrophenol; and 4-nitroaniline for the CCV associated with samples -13553, -13549, -13550, and -13548. The %Ds were also >20% for aniline and bis(2-chloroethyl)ether for the CCV associated with samples -13551, -13546, -13552, -13547, and -13556. All associated sample results were NDs and, thus, were qualified UJ,SV7c.
3. The CCVs were not analyzed at the appropriate method frequency for all analytes except 3,3'-dichlorobenzidine. All associated sample results that were detects were qualified J,SV7d. All associated sample results that were NDs were qualified UJ,SV7d.
4. The phenol-d5 and nitrobenzene-d5 surrogate %Rs were < the laboratory LALs but ≥10% in sample -13550. Since only one surrogate %R failed to meet laboratory acceptance criteria from each fraction, no sample data were qualified. The nitrobenzene-d5 surrogate %R was < the laboratory LAL but ≥10% for sample -13548, and the 2,4,6-tribromophenol surrogate %R was < the laboratory LAL but ≥10% for sample -13552. Since there was only one surrogate outlier for each sample, and sample -13552 was analyzed at a dilution, no sample data were qualified as a result.

5. The LCS %R was < the laboratory LAL but ≥10% for benzyl alcohol. The associated sample results were NDs and, thus, were qualified UJ,SV12a.
6. The MS and/or MSD %Rs did not meet laboratory acceptance criteria for 29 target analytes. The MS/MSD RPDs were > laboratory acceptance limits for most analytes. Since MS/MSD analyses are not a client requirement for this method, no sample data were qualified as a result.

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. The MSD %R was > the laboratory UAL for Aroclor 1260. It should be noted that the MS/MSD analyses were performed on a LANL sample from another RN, and the parent sample raw data were not included in the data package. Since MS/MSD analyses are not a client requirement for this method, no sample data were qualified.

ND	Analyte concentration is not detected above the reporting limit
UI	Gamma Spectroscopy-Uncertain identification
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y	QC Samples were not spiked with this compound
Z	Paint Filter Test-Particulates passed through the filter, however no free liquids were observed.

1202072715	248842002(RE46-10-13553) Post Spike Duplicate (PSD)

NOTE: For volatile organic analyses the matrix spike designations may be indicated as "PS" or "PSD". The "PS" designation (post spike) indicates that the matrix was fortified prior to analysis but after applying any prep factors, such as a dilution. The laboratory considers the MS/MSD and PS/PSD designations interchangeable.
Samples 248842 002, 003, 004, 005, 006, 007, 008, 009 and 010 in this SDG were analyzed on an "dry weight" basis. Samples 248842 001 in this SDG were analyzed on a "as received" basis.

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV# 14.

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 19.1.2.

Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the Target processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the Target software will update the 'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.

The surrogate compounds were calibrated using a minimum five-point calibration curve. The surrogates were added by the auto sampler at a concentration of 50 ug/L. GEL Laboratories LLC will not have surrogate recoveries reported for Dibromofluoromethane. This is due to increased regulations for this analyte and an industry shortage.

Due to software limitations, the Calibration Summary Form 6 may not indicate all the calibration files comprising the initial calibration. A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package.

The linear equation used in Target and indicated on the initial calibration summary form is not a conventional linear equation (slope intercept formula) and does not match the equation found in SW-846 method 8000B. The x and y axes are inversed in Target, so that the instrument response is treated as the independent variable (x) and the concentration ratio is treated as the dependent variable (y). The equation used in Target to calculate sample results is adjusted to account for the linear equation inversion and reciprocal slope. The adjusted calculation has been independently verified to produce valid results.

Initial Calibration

All initial calibration requirements have been met for this sample delivery groups (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

Continuing Calibration Verification Requirements

All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement

The MBs analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries

Surrogate recoveries in all client and quality control samples were within the acceptance limits.

Laboratory Control Sample (LCS) Recovery

The LCS spike recoveries met the acceptance limits.

QC Sample Designation

Sample 248842002 (RE46-10-13553) was designated for spike analysis in this SDG.

Matrix Spike (PS) Recovery Statement
The spike recoveries for this SDG were within the required acceptance limits.

Matrix Spike Duplicate (PSD) Recovery Statement
The spike duplicate recoveries for this SDG were within the required acceptance limits.

Relative Percent Difference (RPD) Statement
The RPD(s) between the matrix spike pair met the acceptance limits.

Internal Standard (ISTD) Acceptance
The internal standard responses in all client and quality control samples met the required acceptance criteria.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

The following samples were not analyzed within holding because of a required dilution that occurred outside the holding time: 248842004 (RE46-10-13551), 248842007 (RE46-10-13546) and 248842009 (RE46-10-13547).

The following samples were analyzed outside the method specified holding time, but were analyzed within two times the recommended holding period. This satisfies the client requirements. The results are reported 248842004 (RE46-10-13551), 248842005 (RE46-10-13550), 248842007 (RE46-10-13546) and 248842009 (RE46-10-13547). See DER# 811338.

Sample Preservation and Integrity
All samples met the sample preservation and integrity requirements.

Sample Dilutions / Methanol Dilutions
The following samples were diluted using the methanol extraction procedure because target analyte concentrations exceeded the calibration range: 248842004 (RE46-10-13551), 248842007 (RE46-10-13546) and 248842009 (RE46-10-13547).

Sample Re-extraction/Re-analysis
Re-analyses were not required for samples in this SDG.

Miscellaneous Information

Electronic Package Comment
This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Data Exception (DER) Documentation
The following DER was generated for this SDG: 811338.

Manual Integrations
Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment
Tentatively identified compounds (TIC) were required for this SDG.

Additional Comments
Additional comments were not required for this SDG.

Residual Chlorine
Residual Chlorine was not detected in any of the samples in this SDG.

System Configuration
The Volatile-GC/MS analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description	P & T Trap
VOA1.I	Gas Chromatograph/Mass Spectrometer	HP6890/HP5973	RTX-624	Restek, 60m x 0.25mm x 1.4um	Trap 10

Certification Statement
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Specification and Requirements Exception Description:	DER Disposition:
1. Samples 248842004,005,007,009 249057002, & 003 were analyzed outside the fourteen day holding time.	1. Samples 248842004,005,007,009, 249057002, & 003 were analyzed within two times the recommended holding time. This satisfies client criteria. The results are reported.
2. Sample 249057003 did not meet acceptance criteria for surrogate recovery. Bromofluorobenzene recovered at 135%. The limits are 65%-130%.	2., Sample 249057003 did not meet acceptance criteria for surrogate recovery. Re-analysis was needed for this sample at a dilution due to over range analytes. The diluted analysis passed surrogate recovery. Matrix interference has been demonstrated. The results were reported.

Preparation/Analytical Method Verification

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-009 REV# 23.

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 18.2.

Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the Target processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the Target software will update the

'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.
Due to software limitations, the Calibration Summary Form 6 may not indicate all the calibration files comprising the initial calibration. A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package. Please note that the second level of the initial calibration (5 mg/L) is only used for n-Nitrosodipropylamine. The various calibration mixes may not be calibrated using all of the calibration levels. In addition, not all of the mixes are calibrated using the same levels.

Diphenylamine has now superseded N-Nitroso-diphenylamine as a CCC on Quantitation Reports, Initial Calibration Reports, Calibration Check Standard Reports, etc. Previous versions of EPA Method 8270 (prior to 8270C) listed N-Nitroso-diphenylamine as a CCC. However, as stated in EPA Method 8270C, Revision 3, December, 1996, Section 1.4.5. "N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine." Studies of these two compounds at GEL, both independent of each other and together, show that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine will be reported as Diphenylamine on all reports and forms.

Initial calibration and continuing calibration requirements may not be satisfied for all requested target analytes analyzed according to Method 8270D. However, the method allows for a designated number of outliers dependent on the requested analyte list. Please see the Initial Calibration and/or CCV Requirements Section of the case narrative for any samples impacted by calibration failures.

When calibrations are performed for Appendix IX compounds some of the compounds may not be calibrated exactly according to the criteria in Method 8270C. If the %RSD is greater than 15% or the correlation coefficient is less than 0.99 then the analyte is quantitated using the response factor. If the analyte is detected then the sample is re-analyzed for that analyte on an instrument that is compliant with the criteria of the method.

The linear equation used in Target and indicated on the initial calibration summary form is not a conventional linear equation (slope intercept formula) and does not match the equation found in SW-846 method 8000B. The x and y axes are inversed in Target, so that the instrument response is treated as the independent variable (x) and the concentration ratio is treated as the dependent variable (y). The equation used in Target to calculate sample results is adjusted to account for the linear equation inversion and reciprocal slope. The adjusted calculation has been independently verified to produce valid results.

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

CCV Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
Surrogate recoveries were within the acceptance limits except for Phenol-d5 and Nitrobenzene-d5 in sample 248842005 (RE46-10-13550) and Nitrobenzene-d5 in sample 248842006 (RE46-10-13548). The samples were re-extracted beyond the required holding time and reanalyzed. The low surrogate recoveries were confirmed by re-extraction for sample 248842005. The initial analysis was reported. Sample 248842006 surrogate recoveries were within the acceptance limits upon re-extraction. Both sets of data were reported. The low recovery for 2,4,6-Tribromophenyl in sample 248842008 (RE-10-13552) was

attributed to the dilution factor. therefore the sample was not re-extracted.

Laboratory Control Sample (LCS) Recovery
The laboratory control sample (LCS) recoveries were within the acceptance limits except for Benzyl alcohol. The low recovery accounts for less than 5% of the total analytes requested, therefore the LCS was considered acceptable and reported.

QC Sample Designation
Sample 248842002 (RE46-10-13553) was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike (MS) Recovery Statement
Many of the MS recoveries were not within the acceptance limits. The low recoveries were attributed to possible laboratory error combined with matrix interference. The recoveries in the MS, although below the acceptance limits, were similarly demonstrated in the MSD. The recoveries in the MSD were within the acceptance limits, however many recoveries were slightly above the lower limit. Please see the spike summary form in the QC Data Summary section of the data package for details.

Matrix Spike Duplicate (MSD) Recovery Statement
The recoveries in the MSD were within the acceptance limits except for Benzyl alcohol. The low recovery was attributed to matrix interference. Many of the MSD recoveries were slightly above the lower limit. Please see the spike summary form in the QC Data Summary section of the data package for details.

MS/MSD Relative Percent Difference (RPD) Statement
Many of the relative percent differences (RPD) between the MS and MSD were above the acceptance limits. The high differences were attributed to possible laboratory error and matrix interference. Please see the spike summary form in the QC Data Summary section of the data package for details.

Internal Standard (ISTD) Acceptance
The internal standard responses were within the required acceptance criteria for all samples and QC.

Technical Information

Holding Time Specifications
All samples in this SDG met the specified holding time. GEL assigns holding times based on the associated methodology that assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
Samples 248842004 (RE46-10-13551), 248842007 (RE46-10-13546), 248842008 (RE46-10-13552), 248842009 (RE46-10-13547) and 248842010 (RE46-10-13556) were diluted because the extracts were very dark and viscous.

Sample Re-extraction/Re-analysis
Samples in this SDG were re-extracted and re-analyzed to confirm surrogate recoveries.

Miscellaneous Information

Data Exception (DER) Documentation
Data exception report (DER ID 809235) was generated for this SDG.

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations. Please see the raw data in the Miscellaneous Section.

Electronic Package Comment
The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

System Configuration

The samples reported in this SDG were analyzed on one or more of the following instrument systems. Instrument systems are referenced in the raw data and individual form headers by the Instrument ID designations listed below:

The Semi-Volatile-GC/MS analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description
MSD6.I	HP Mass Spectrometer	HP6890/HP5973	DB-5MS	25m x 0.20mm x 0.33 um (5% Phenylmethylpolysiloxane)

Method/Analysis Information

Procedure:	**Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**

Prep Method:	SW846 3550B
Analytical Batch Number:	968549
Prep Batch Number:	968547

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8270C:

Sample ID	Client ID
248842006	RE46-10-13548
1202079224	Method Blank (MB)

1202079226	Laboratory Control Sample Duplicate (LCSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Preparation/Analytical Method Verification

SOP Reference
Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-009 REV# 23.

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 18.2.

Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the Target processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the Target software will update the 'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.

Due to software limitations, the Calibration Summary Form 6 may not indicate all the calibration files comprising the initial calibration. A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package. Please note that the second level of the initial calibration (5 mg/L) is only used for n-Nitrosodipropylamine. The various calibration mixes may not be calibrated using all of the calibration levels. In addition, not all of the mixes are calibrated using the same levels.

Diphenylamine has now superseded N-Nitroso-diphenylamine as a CCC on Quantitation Reports, Initial Calibration Reports, Calibration Check Standard Reports, etc. Previous versions of EPA Method 8270 (prior to 8270C) listed N-Nitroso-diphenylamine as a CCC. However, as stated in EPA Method 8270C, Revision 3, December, 1996, Section 1.4.5, "N-Nitroso-diphenylamine decomposes in the gas

chromatographic inlet and cannot be separated from Diphenylamine." Studies of these two compounds at GEL, both independent of each other and together, show that they not only co-elute. but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine will be reported as Diphenylamine on all reports and forms.

Initial calibration and continuing calibration requirements may not be satisfied for all requested target analytes analyzed according to Method 8270D. However, the method allows for a designated number of outliers dependent on the requested analyte list. Please see the Initial Calibration and/or CCV Requirements Section of the case narrative for any samples impacted by calibration failures.

When calibrations are performed for Appendix IX compounds some of the compounds may not be calibrated exactly according to the criteria in Method 8270C. If the %RSD is greater than 15% or the correlation coefficient is less than 0.99 then the analyte is quantitated using the response factor. If the analyte is detected then the sample is re-analyzed for that analyte on an instrument that is compliant with the criteria of the method.

The linear equation used in Target and indicated on the initial calibration summary form is not a conventional linear equation (slope intercept formula) and does not match the equation found in SW-846 method 8000B. The x and y axes are inversed in Target, so that the instrument response is treated as the independent variable (x) and the concentration ratio is treated as the dependent variable (y). The equation used in Target to calculate sample results is adjusted to account for the linear equation inversion and reciprocal slope. The adjusted calculation has been independently verified to produce valid results.

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG). A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

CCV Requirements
All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
Surrogate recoveries were within the acceptance limits except for Nitrobenzene-d5 in sample 248842005 (RE46-10-13550). The low surrogate recovery was confirmed in the initial analysis.

Laboratory Control Sample (LCS) Recovery
The laboratory control sample (LCS) recoveries were within the acceptance limits except for Benzyl alcohol. The low recovery accounts for less than 5% of the total analytes requested, therefore the LCS was considered acceptable and reported.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
Many of the relative percent differences (RPD) between the LCS and LCSD concentrations were not within the acceptance limits. The high differences were attributed vagaries in the extraction process.

Internal Standard (ISTD) Acceptance
The internal standard responses were within the required acceptance criteria for all samples and QC.

Technical Information

Holding Time Specifications
Samples in the initial batch for this SDG were extracted within the required holding time. Samples 248842006 (RE46-10-13548) and 248842005 (RE46-10-13550) were re-extracted beyond the required holding time to confirm surrogate recoveries. GEL assigns holding times based on the associated methodology that assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions
Samples in this batch for this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this batch for this SDG.

Miscellaneous Information

Data Exception (DER) Documentation
Data exception report (DER ID 810015) was generated for this batch /SDG.

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations. Please see the raw data in the Miscellaneous Section.
