Subject: Ash Pile - Shipment of Debris (73-002)

Remarks: James Bearzi, KC, Gene Turner, J. Ordaz

John and Gene brought up the fact that they had "a pretty major screw-up" regarding shipment of debris (i.e., tincans) to a municipal landfill. They both admitted that the debris had been shipped "back in November" and that this was out of compliance with the approved work plan. James asked why ash was being shipped as low-level waste (to Area G). Gene responded by saying he wasn't aware of any RCRA constituents being in the ash. *(NMED will check waste characterization sampling). James informed them that they would receive a letter next week asking for manifests and/or shipping documents. Ordaz added that there was no excuse for this mishap, but it was remedied.

Action Required: (1) Letter will be sent week of 12/17/05 (Information Request) (2) check waste characterization results for hazardous constituents.

Action Taken:
