Subject: Giant Refining Company, Bloomfield Refinery – River Terrace

Remarks: Randy and Cindy called to inform us that Giant had to shut down the inlet pumps at the River and this in turn shut down the dewatering pumps to the bioventing system at the river terrace. Rain events have raised the level of the river and increased the silt. Giant was schedule to perform the in-situ respiration test the week of July 30, 2007. However, due to weather conditions, the pumps shutting down, and raised level of the river, this test will not be performed.

Giant will notify NMED when they can perform the respiration test, Giant is thinking of September, as the weather will be better and the bioventing system should be up and running, and the river levels should be lower.
