Reason for Inspection: Routine  Complaint  Follow-up  Last Inspected on: 9/14/06

Facility is a:  Notifier  Non-Notifier

Current Generator Status:  Non-Handler  CESQG  SQG  LQG  Transporter/Trans  TSD

Checklists Completed:  CESQG  SQG  LQG  Used Oil Other: \_\_\_\_\_

History, Size and Nature of Business: The facility has been at this location since 1994. There are currently 150 employees working primarily in the EPI Bldg. (Epitaxial) which comprises the offices and main fabrication area on the top level, and the sub-Fab area on the lower level. This building is approximately 43,500ft<sup>2</sup> per level. The adjacent building is a former fabrication area, but is currently used as a warehouse. This structure is approximately 57,100ft<sup>2</sup>. Total property is 10.5 acres. The nature of business is manufacturing of electronic-grade silicon wafers for the semiconductor industry.

Process Description and Results of Inspection:

- The manufacturing of the wafers generates wastes such as corrosive liquids, wipes, flammable liquids & mercury waste, primarily from cleaning the wafers and equipment so as to produce a quality product for the customer.
- A physical walk through of the facility was conducted, photos were taken, and disposal documentation was reviewed.
- The inspection was based on complaint regarding improper disposal of acid soaked & solvent soaked rags directly into the municipal dumpster. The NMEI inspected the dumpster and did not identify any visible rags within the dumpster.
- The NMEI were provided disposal records showing that disposal of any wastes determined to be hazardous are handled properly.
- The entire manufacturing process is a closed-loop system, designed for elementary neutralization of corrosive liquids.
