Subject: Quarterly Quality Assurance Report
General Electric Apparatus Service Shop
Albuquerque, New Mexico
Law Environmental Job No. 55-4342

Dear Mr. York:

We anticipate receipt of the results of the laboratory analyses of the soil samples collected from boring B-1A (located adjacent to the dry well) next week. These will be the first laboratory analyses performed as a part of the scope of this project. At that time we will make an evaluation of the attainment of the data quality objectives, review for compliance with procedures for data collection and evaluation, and discuss the potential effects of any variances from the QA objectives on the overall project objectives. If there are any apparent detrimental effects associated with any such variances, appropriate corrective measures will be evaluated and discussed with you. The results of these activities will be included in the next quarterly quality assurance report.

If you have any questions or if we can provide additional information, please contact us.

Sincerely,

Alison G. Levinson
Project Geologist

A. David Alcott, P.E.
Principal Engineer
