

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 6

1445 ROSS AVENUE, SUITE 1200

DALLAS, TEXAS 75202

July 17, 1990

CERTIFIED MAIL- RECEIPT REQUESTED

Mr. Barry Sims  
PRC Environmental Management, Inc.  
2400 Louisiana Boulevard, NE  
American Financial Center  
Building 4, Suite 225  
Albuquerque, NM 87110

Dear Mr. Sims:

Attached please find the analytical results for the May 1990, sampling at the General Electric facility in Albuquerque. These results are only for the Environmental Protection Agency (EPA) split samples.

I have already reviewed these data. It would be useful however, if PRC would also review the data and tabulate detections with a corresponding map and depths. There are elevated concentrations of volatiles from sample FM507 (soil B-5) but I did not see that anything else is noticeably elevated. I could not find the semivolatile fraction analysis for MF507 and MF508, although the traffic report indicates that these analyses were requested. Please look closely for these data reports. If you cannot find them either, I need to call the lab.

These data are the originals so please return them to EPA when your review is complete.

Mr. York said that the Remedial Facility Investigation Report (RFI) is coming along nicely and should be in by August 10, 1990. Please call if you have any questions!

Sincerely,

Kathleen O'Reilly  
Geologist  
Technical Section (6H-CX)  
RCRA Enforcement Branch
