RE: Holoman Air Force Base Permit Modification Request dtd: 22 October, 1993.

This afternoon I read the governing permit for Holoman Air Force Base and have made the following conclusions in reference to their request.

1. a. Their construction is a class 1 modification. I would like the items that we discussed this morning answered by them.
 - a. How long the containers will be required to stay in the temporary area.
 - b. Estimated date of completion including the date of 'reoccupation' of the new slab.
 - c. Any record of spills at the site? If so then analysis of the construction materials hauled away need to be required. If no spills on record then no analysis is required. If there is a record of spill analysis of the building site should be required and remediation performed as needed.
1. b. A more detailed explanation of the equipment they would like to delete is required. I have read the required equipment list in the permit and have no opinion at this time.
1. c. A more detailed explanation is required so that we might know what forms they would like to update.
1. d. I read the section on container management in module III and could not find the point of contention. I did find in the same section Module III.B.3.b. which states that "Each container must be clearly marked as to its contents and the date each period of accumulation begins." I will have to ask for a specific literature citation to find what they are referring to.
1. e. At this point I do not know enough about the operation or regulations to make a judgement I could probably use and get guidance from Stephanie Stoddard on this one.
1. f. Changes in office symbols, phone numbers. I see no problem and think it is a class 1 modification.
