C. Giblin

Subject: Spill Sites Bldg 1080, Hansel Phelps

Date: 23 Nov 94

1. After looking closer to the results we told you about, it was evident that they did not belong to this spill site (Hansel Phelps). It was misplaced results from an IRP site. So far, we have found documentation on the PID readings, documentation of field notes, and we have requested sample results from the laboratory on the Bldg 1080 site.

2. As a summary of our conversation on 22 Nov 94 we are to:

- Get results and documentation on the Bldg 1080 site ✓
- Sampling Plan: Take a QC duplicate for each sample
- Sampling Plan: Discuss decontamination procedures for coring, i.e., investigated derived waste, discuss sampling and analysis be performed in a timely manner for volatiles, Discuss chain of custody and the timelines of handling the semi-volatiles.

3. Holloman is looking into using soil for the closure of the landfill. May have to do TCLP but talk to Dave Duran with NMED.

4. Make changes to the sampling plan, put in shading so that it can be distinguished as amendment 1.

5. We are looking to send you this information and revised sampling plan as soon as possible. We would like to send it together as a package, but am not sure how long it will take to get the results sent. I will keep you posted.
