MEMORANDUM

TO: Barbara Hoditschek, RCRA Permits Program Manager
FROM: Ron Kern, RCRA Technical Compliance Program Manager
DATE: March 8, 1995
SUBJECT: **Sampling and Analysis Plans and Remediation Waste Cleanup
Criteria: JP-4 Spill Sites, Holloman Air Force Base**

At your request, the Technical Compliance Program has done an evaluation of the March 3, 1995 revised Sampling and Analysis Plans for two JP-4 spill sites at Holloman Air Force Base (HAFB). These spill sites are the Building 1080 and Hensel Phelps (F-117A maintenance docks/hangar project) sites.

One of our previous concerns was whether an adequate cleanup had been conducted at the two JP-4 spill sites. For both the Building 1080 and Hensel Phelps spill sites, HAFB has now provided information which indicates that the proposed confirmatory sampling should be technically adequate. Therefore, I recommend that we should approve of their plans and schedule. We should emphasize, however, that the confirmatory sampling is to be conducted on soils from bottom depths of the original remedial excavations, not on any backfill material deposited subsequent to the excavations.
