MEMORANDUM

TO: Barbara Hoditschek, RCRA Permits Program Manager
FROM: Ron Kern, RCRA Technical Compliance Program Manager *RK*
DATE: April 20, 1995
SUBJECT: **Review of Analytical Data Related to JP-4 Spill Sites and
Remediation Waste Cleanup Sites, Holloman Air Force Base**

At your request, the Technical Compliance Program has done an evaluation of the analytical data for two JP-4 spill sites at Holloman Air Force Base (HAFB). These spill sites are the Building 1080 and Hensel Phelps (F-117A maintenance docks/hangar project) sites. The data set consists of HAFB's April 5, 1995 letter with attachment, which includes all requested analytical data for soil samples at the original two JP-4 spill sites. The data set also contains HAFB's April 7, 1995 letter with attachment, which includes all requested analytical data for soil samples from the remediation waste cleanup piles from the two JP-4 spill sites.

The April 5, 1995 analytical data package indicates that there are no hazardous constituent nor hazardous waste concerns at either of the two JP-4 spill sites. The April 7, 1995 analytical data set shows that there are no hazardous constituent nor hazardous waste concerns at either of the two remediation waste cleanup piles from the two JP-4 spill sites. HAFB may dispose of the remediation waste cleanup soils/debris as a solid waste.

HAFB should be commended for expediting the necessary site characterizations and soil analyses and fulfilling the technical regulatory requests in a timely manner.

cc: Michael Chacon, RCRA Permits Program
