III. SUMMARY OF FINDINGS.

Operation of the T-38 Test Cell (SWMU 229) dual phase vapor extraction (DPVE) continued this quarter. Product recovery has ranged from 2000 gallons to 600 gallons per day. Recoveries have dropped off as product levels in existing wells decreases.

Analytical data is being compiled for the Table 1 Phase 2 and Table 3 RFI reports. Both reports are scheduled for submission this summer. HAFB intends to conduct voluntary cleanup actions at the Table 3 sites upon completion of the RFI report.

Design activities have been initiated for the T-38 Test Cell and Bldg 828 (SWMU 230). Once completed, the design specs will be submitted to EPA. Following appropriate time for EPA to review the design specs, HAFB will begin construction of the DPVE systems.

A hybrid asphalt cap design for SWMUs 179, the Former Entomology Shop and SWMUs 4 and 82, the Refuse Collection Truck Washrack, has been initiated. Once the designs have been completed, they will be submitted to EPA. Following appropriate time for EPA to review the design specs, HAFB will begin construction of the asphalt caps.

Constuction of the soil vapor extraction (SVE) at AOC-T was completed in March. Operation of the system began following construction. The system is scheduled to operate for a period of one year.
