III. SUMMARY OF FINDINGS.

Construction of the T-38 Test Cell (SWMU 229) dual phase vapor extraction (DPVE) system neared completion this quarter. One skid will be delivered in May, making the system fully operational. Product recovery to date is estimated at 60,000 gallons of JP-4.

Construction of the Bldg 828 Fuel Spill (SWMU 230) DPVE system was completed this quarter. The system should be operational by the end of April.

Remediation of Tables 2 and 3 SWMUs recommended for corrective action began in December. These voluntary clean up actions are required to comply with the 1000 parts per million total petroleum hydrocarbon clean up standard established with NMED.

The soil vapor extraction system (SVE) at SWMU AOC-T, the POL Spill Sites, continued to operate this quarter. At this time, approximately 10,000 pounds of JP-4 have been removed. This system is anticipated to operate through the summer.

The biovent system at SWMU 133, Building 703, Washrack Discharge Area, continues to operate flawlessly. Confirmations borings are scheduled to be taken in June.

Construction work plans are being generated for Bldg 301 Aircraft Maintenance Hangar (SWMU AOC-P) and the Fire Training Area (SWMUs 39, 127, 135, 170). Smaller scale biovents are scheduled for SWMUs 3, 8, 36, and 123.
