Dear Ms. Morlock

Pursuant to the schedule approved in the Stage 2D-2 RFI work plan, Halliburton NUS (HNUS) commenced field sampling activities on 15 November 1994. They obtained access to the Manzano base and marked, with stakes and or flagging, the proposed locations of soil sample collection for the five emergency holding tanks. Decontamination of sampling equipment is in progress, with soil sampling activities to follow.

Please note that soil sampling activities are occurring concomitantly with tank sampling in accordance with your comments on the approved work plan. Please call me at (505) 846-2773/0053 if you have any questions.

Sincerely

CHRISTOPHER B. DeWITT, R.P.G.  
Chief, Restoration Branch  
Environmental Management Division
