**Subject:** FY08 PSH Project status

Baird

I received confirmation that the funding has been received for the FY08 project to continue/complete the investigation of the extent of the PSH contamination discovered on the groundwater near the Bulk Fuels Facility and install an interim remedial system.

The funding is at the contracting level, which will take approximately 6 weeks to process. If the process goes smoothly, we will have a contract in place by mid-May, with a workplan to follow within 30-45 days, followed by the actual field work.

I will keep you informed of the contracting process status.

Also, we completed the camera survey of KAFB-1062, the well at the BFF into which the sounding probe was dropped. I witnessed the removal/inspection of the pump and the actual camera survey of the wellbore; no damage was apparent in either case. We have a DVD copy of the camera survey that we will forward to you for your review.

Thanks
