Subject: RE: NMED approval requested, KAFB-106EX2 completion diagram and compiled borehole log

Hi Tara,

Quick question – per Section 3.2.6.1 of the Work Plan, I believe the bottom of the seal should be 467 feet below ground surface (bgs) and the top of the seal at 457 feet bgs. The construction diagram shows the bottom of the seal right at the water table with the top of the seal at 467 feet bgs. Can you confirm these depths?

Thanks in advance,
Diane
