CERTIFIED MAIL - RETURN RECEIPT REQUESTED

Mr. Bill Gallagher  
Acting Chief  
ALONM Section (6H-PS)  
U. S. Environmental Protection Agency  
1445 Ross Avenue  
Dallas, TX 75202

HSWA 89  
TUX

Dear Mr. Gallagher:

Enclosed are the following documents for the Los Alamos National Laboratory (Laboratory), as requested by Mr. Stephen Slaten and Mr. Richard Mayer, of your staff.

1. Solid Waste Management Units Report (4 volumes).
2. Ortho/Topo map of the Los Alamos National Laboratory property showing the Technical Areas.
3. Environmental Restoration (ER) Program Task Listing.

The Solid Waste Management Unit (SWMU) Report, which was prepared for the Laboratory by International Technology Corporation, is the best available information that addresses the SWMU requirements of 40CFR 270.14(d). This Report should be beneficial to the Environmental Protection Agency (EPA) in determining what SWMUs need investigation and corrective action.

The Ortho/Topo map addresses your staff's request for a map showing the general relationship and location of the technical areas to the overall topography and canyon systems of the Laboratory.

The ER Program Task Listing will give you an idea as to the sequence for starting the Remedial Investigation and Feasibility Study (RI/FS) of the SWMUs identified in your Facility Assessment Evaluation as needing investigation. The Listing also indicates approximate time frames for approximately the first third of the list as to when the RI/FS process would be implemented as reflected in the current draft ER Program Implementation Plan. This information is provided as a starting point for further discussions with your staff to develop an approach to scheduling work that will be addressed by the permit.
