

Los Alamos National Laboratory Groundwater Technical Review Committee

MEETING NOTICE

June 13, 1996

1:15 - 4:30 P.M.

DOE/LAAO Conference Room 100

It is has been several months since the TRC last met. LANL/DOE has been busy drafting (1) a LANL groundwater protection strategy and (2) Groundwater Data Quality Objectives. Together, these will establish the Laboratory's "philosophy" towards groundwater protection, and guide the comprehensive Laboratory Hydrogeologic Workplan.

We are looking to the TRC to critique our work for technical soundness.

At this TRC meeting, LANL will introduce the rest of the TRC to our approach. We will illustrate how these apply to LANL waste sites by reviewing two case studies: one for a mesa top hydrologic setting and another for a canyon bottom hydrologic setting.

*Spur lets
discuss
your concerns
about this
meeting*
