Kathryn

This is a follow up of our conversation this morning regarding investigations being conducted at some SWMUs that are near your house. These sites are included in a document entitled Investigation Work Plan for Upper Los Alamos Canyon Aggregate Area (IWP). The document is available at our website (Rebecca sent you a link to the website), and the document ID # is 7783. You can use this number to search for the document. It has historical information on each of the sites you were interested in.

SWMU 01-003(a), Bailey Bridge Landfill was used for disposal of demolition debris from 1964-1978. The area was covered with 4 ft of fill and housing were built. The SWMU is now under pavement and buildings of Loma Vista Condominium complex. Phase I investigation was conducted in 1992. After review of Phase I investigation, some questions remained unanswered, hence Phase II investigation. Phase II investigation is being done now to collect more samples to define the nature and extent of contamination. The report is due to NMED in May, 2009. NMED will review the Phase II investigation report, when submitted and decide whether additional remediation work is required at these SWMUs.

I need the entire number of other SWMUs you wanted information on, e.g., there are 11 SWMUs that are numbered 01-001 (i.e., a, b, c, d, e, f, g, o, s, t, and u) and are included in this IWP. Similarly there are nine SWMU that are numbered 01-006 (i.e., a, b, c, d, e, g, h, n, and o). The background on all these sites is included in the IWP.

Give me a call if you have any further questions.
