UNRECORDED

README

This CD presents geodetic survey data associated with the 2009 North Ancho Canyon Aggregate Area field investigation. Files are presented in ESRI GIS shapefile, grid, or TIN format; point files are also presented in .CSV format.

Survey data in original Trimble format (current ADEP standard) is provided in the directory "RawSurveyData." This directory contains both Survey Controller files and Trimble Geomatics Office and Trimble Pathfinder Office files. Quality control statistics for surveys can be located and/or generated from these files.

A discussion of volume calculation methodology is presented in the directory "Memos_to_File" in the PDF "Memo_NA_ExcavationsStockpiles_VolumeCalcs_07272009.pdf." TIN and subsequent raster generation was often facilitated with breaklines to fill in gaps in survey data. These breaklines are not provided separately on this CD, but are incorporated into each TIN.

This data should be cross-referenced to the Investigation Report for North Ancho Canyon Aggregate Area for clarification. Further README.txt files are contained in subdirectories to convey imported information about files contained therein.

Questions regarding these datasets or associated work processes should be directed to:
