Title: WCSF: Amendment #2 CrEX-1

Reason for Change: To include generation of a new waste stream, Waste #13 "Compressor Condensation Water". Also to address the sampling of Waste #2 Drill Cuttings and Waste #3 Drilling Fluids during cold weather.

Waste Description: Condensation generated from operations using a compressor. Drill cuttings and drilling fluids are denoted as waste streams 2 and 3 respectively in the original CrEx-1 WCSF.

Characterization, Management, and Disposal: The characterization, management, and disposal of "Compressor Condensation Water" will mirror that of waste stream #5 "Decontamination Fluids" in the original CrEx-1 WCSF. The sampling, characterization, and storage methods will be the same for both waste streams. Due to Freezing conditions sampling operations for drill cuttings (waste stream #2) and drilling fluids (waste stream #3) cannot be completed within ten (10) days of generation as described in the original CrEx-1 WCSF. A comprehensive and representative sample will be taken for these waste streams in the spring once the sample material has thawed.
