**SUBJECT: GROUP CORRECTIONS FROM ANNUAL RCRA INSPECTION**

This is in reference to the finding at our <90 storage building (TA-3, 2133-NIS-4-PORTABLE BUILDING-NO DECONTAMINATION EQUIPMENT ON HAND).

After discussing this problem with Geri Rodriguez, ESH-19, Hazardous Waste Liaison and her assurance that the only problem incurred in NIS-4 was having no form of decontamination equipment in case of a spill. (Adsorbal) Even though there is plenty of secondary containment I was told that there still needs to be some form of cleanup available.

NIS-4 will purchase and keep on hand inside the building at least two bags of **ADSORBAL** to be used for small spills. It is our opinion that for larger spills the Laboratory HAZ MAT team should be called for the cleanup. There has always been a quick response from the Laboratory HAZ MAT Team and they are much better suited for cleanup of larger spills.

We always want to comply with all ES&H problems and if this fix is not sufficient please let me know and I will do whatever it takes to take care of the problem.
