Date: October 11, 1994

TA-59-1-108-CST-9

A box of petri dishes which had held contaminated soil was sitting on top of a container at this satellite accumulation point. (minor)

This satellite storage area is located in a busy laboratory where many technicians have access. As this was a minor oversight due in part to the generators busy shedule he has assured that this will not be a recurring problem, and he will keep in close contact with his waste coordinator on waste issues and hazardous waste training.
