CERTIFIED MAIL - RETURN RECEIPT REQUESTED

Benito Garcia, Chief
Hazardous and Radioactive Materials Bureau
New Mexico Environment Department
2044 Galisteo St., Building A
P. O. Box 26110
Santa Fe, NM 87505

Dear Mr. Garcia:

Subject: Los Alamos National Laboratory (LANL) Compliance Order 94-09
Fourth Quarterly Report, 1998

The purpose of this letter is to submit the Department of Energy/LANL Fourth Quarterly Report (1998) required by the Amended Stipulation regarding applicability and scope of, and time frames provided in, Ordered Action No. 23 of Compliance Order NMHWA 94-09.

As discussed in previous reports, efforts since 1994 resulted in proper disposition of 643 of the 644 gas cylinders originally subject to the Amended Stipulation. The final cylinder, number C92030490, presented some difficulty as LANL was unable to identify its final disposition. As described in the Fourth Quarterly Report, LANL was able to trace this cylinder to an offsite shipment made in 1995. The paperwork suggests that the same cylinder was listed in the Environmental Management-Solid Waste Operations (EM-SWO) computer database under two separate identification numbers.

LANL has determined that this cylinder is no longer onsite and that it has been sent to an appropriate offsite facility. Efforts undertaken to locate this cylinder and to confirm its offsite disposition are described in the enclosed report. LANL's RCRA attorney will contact New Mexico Environment Department's legal counsel in order to arrive at a mutually acceptable method for termination of the Amended Stipulation.

If you have any questions, please contact me at (505) 665-5027 or Jody Plum at (505) 665-5042.

Sincerely,

Joe C. Vozella
For

Joseph C. Vozella

Attachment 1

Fourth Quarterly Report – 1998 for Amended Stipulation

FOURTH QUARTERLY REPORT (1998) IN RESPONSE TO AMENDED STIPULATION

The following discussion (with tables) provides information required by the *Stipulation Regarding Applicability and Scope of, and Timeframes Provided in, Ordered Action No. 23*, dated December 7, 1994, as amended by the Amended Stipulation, dated May 23, 1995, and executed by the New Mexico Environment Department, the U.S. Department of Energy (DOE), and the Regents of the University of California. Updated copies of applicable tables are provided for review.

List of Tables:

- Table 1 - Cylinders Shipped Offsite to Date
- Table 2 - Cylinders Pending Shipment
- Table 3 - Cylinders Confirmed to be Radioactive
- Table 4 - Gas Cylinders Requiring Further Radioactivity Characterization
- Table 5 - Problematic Cylinders
- Table 6 - Non-Hazardous Waste Cylinders

Concerning Table 4:

In the past, cylinder number C92030490 has posed some difficulty in that its final disposition could not be identified. Previous efforts to locate the cylinder included physical searches and review of database information. More recent efforts to trace and establish the location of the cylinder during the third and fourth quarters of 1998 have convinced us that the cylinder was shipped offsite in 1995 under a different cylinder number. The information below provides a summary of LANL's efforts to locate cylinder C92030490.

- Area L at TA-54 and the Chemical and Metallurgical Research Facility (CMR) were thoroughly inspected for the cylinder in question. These two facilities are the only locations where the cylinder might have been stored.
- A search was conducted of the Environmental Management-Solid Waste Operation (EM-SWO) computer database for information related to cylinder 92030490 and for information on management of other cylinders of Boron Trifluoride.
- A search of EM-SWO records was conducted for information concerning cylinders C92030490 and C95049936 (i.e., Department of Transportation shipping papers, Chemical Waste Disposal Request paperwork, Waste Profile Form paperwork, etc.).

Based on information uncovered as a result of these efforts, LANL believes that the cylinder in question (C92030490) was shipped for recycle under a different cylinder number (C95049936) to MG Industries in Fairless Hills, PA on October 26, 1995. Past confusion over the disposition of this cylinder was due to the fact that the cylinder number was apparently changed between the time it was received at TA-54, Area L (in 1990) and the time it was shipped offsite (1995). LANL believes that the cylinder number was changed during a series of gas cylinder characterization projects conducted at the Laboratory between 1992 and 1995. After analysis, cylinders were shipped back to TA-54 for final management and disposition.

In summary, based on the information included in the Fourth Quarterly Report (1998), we conclude that all 644 gas cylinders identified in the Amended Stipulation have been properly dispositioned.
