MEMORANDUM

TO: Glen Saums, Surface Water Bureau

FROM: C. Kelley Crossman, Hazardous Waste Section *CKC*

DATE: April 6, 1987

SUBJ: LANL NPDES outfalls 128 and 129

In response to EPA public notice request for comments (7T-3164-NMLX) on the subject outfalls, would you ask EPA to require at least a one-time analysis for silver in outfall 128, the photo-circuit board shop, and chromium in outfall 129, the boiler blowdown outfall? I believe LANL should have some documentation on these potential wastes which are common in these processes.
