## WASTE STREAM CHARACTERIZATION

Please be advised that the Environmental Protection Group (EM-8) has revised the schedule for waste stream characterization for the TA-53 Sanitary Lagoons so that work on this project will begin in January 1992, subject to the approval of the EPA and NMED. I have requested that Steven Rae of EM-8 schedule a kick-off meeting with the operating groups at TA-53 in coordination with Michael Brandt prior to the start of this project.

In the meantime, operating groups should be reminded that control of hazardous and toxic discharges is a responsibility of their organizations. Enclosed is a copy of a memorandum from Allen J. Tiedman concerning this responsibility.

The Environmental Management Division is looking forward to working with the operating groups at TA-53 to insure that all waste streams are properly identified and are being collected and discharged through the proper treatment facility.
