### HEATHLTY WATER NOW ASAP

We the People United of the Sole Source Espanola Aquifer Basin and Santa Fe Community respectfully request that the Powers that Be hear our concerns and act in our behave to protect and preserve our living waters that affect the health of all our women, men, pregnat women, infants children, sick and the aged.

The Buckman Direct Diversion Project continues to spend \$215 million plus without adequate research and documentation that our health and safety will be protected by the diversions of Rio Grande river water containing emerging radioactive contamination from nuclear bomb waste created by our up river nuclear scientists from LANL. Health risks such as genetic mutations which cause birth defects, low birth weight, infertility, premature birth, environmental illness, and auto immune disease from the synergistic and cumulative effects of include Americium-241, Neptunium-237, Plutonium-238, 239, and 240, Cesium-137, Strontium-90, and Tritium, Selenium, Hexavalent Chromium, PCB, and Perchlorate in our drinking and food growing water and our air, need further research and documentation.

**WE the People United of this Community Respectfully Intend that there be Created:**

1. An independent toxicologists or medical review panel with current experience in nuclear related disease and embryological risk factors be consulted to research our continued concerns about health and safety for women and children from drinking water and eating food with nuclear contamination in a area with highly unresolved "background radiation" also in our air.
2. A citizen review board be put into place to work with the BDD Board to assure that all pubic health concerns are addressed fully before \$215 plus dollars continues to be spent
3. More frequent Town Hall Meeting to meeting to monitor tax spending be provided
4. Verification that the surrounding area of the Rio Grande BDD Projects site be free of potential increases of emerging nuclear bomb waste with all cost of protective research, early warning system, and clean up are financially accountable to LANL.
5. BDD energy will be provided by wind, solar and micro -turbine generation technology
6. Alternative long term sustainable water sources to be funded concurrently as the BDD Project that include roof top catchments and filtration, effluent bio-digesters, deep saline aquifer filtration and major water conservation education programs.

The Buckman Direct Diversion Project continues to spend \$215 million plus without adequate research and documentation that our health and safety will be protected by the diversions of Rio Grande river water containing emerging radioactive contamination from nuclear bomb waste created by our up river nuclear scientists from LANL. Health risks such as genetic mutations which cause birth defects, low birth weight, infertility, premature birth, environmental illness, and auto immune disease from the synergistic and cumulative effects of include **Americium-241, Neptunium-237, Plutonium-238, 239, and 240, Cesium-137, Strontium-90, and Tritium, Selenium, Hexavalent Chromium, PCB, and Perchlorate** in our drinking and food growing water and our air, need further research and documentation.

**WE the People United of this Community Respectfully intend that there be Created:**

1. An independent toxicologists or medical review panel with current experience in nuclear related disease and embryological risk factors be consulted to research our continued concerns about health and safety for women and children from drinking water and eating food with nuclear contamination in a area with highly unresolved "background radiation" also in our air.
2. A citizen review board be put into place to work with the BBD Board to assure that all public health concerns are addressed fully before \$215 plus dollars continues to be spent
3. More frequent Town Hall Meeting to meeting to monitor tax spending be provided
4. Verification that the surrounding area of the Rio Grande BBD Projects site be free of potential increases of emerging nuclear bomb waste with all cost of protective research, early warning system, and clean up are financially accountable to LANL.
5. BBD energy will be provided by wind, solar and micro -turbine generation technology
6. Alternative long term sustainable water sources to be funded concurrently as the BBD Project that include roof top catchments and filtration, effluent bio-digesters, deep saline aquifer filtration and major water conservation education programs.

## HEALTHY WATER NOW ASAP

We the People United of the Sole Source Espanola Basin Aquifer and Santa Fe Community respectfully request that the Powers that Be hear our concerns and act in our behalf to protect and preserve our living waters that affect the health of all our women, men, pregnant women, infants children, sick and the aged.

The Buckman Direct Diversion Project (BDD) continues to spend \$215 million plus without adequate research and documentation that our health and safety will be protected by the diversion of Rio Grande river water containing emerging radioactive, toxic and hazardous contamination from nuclear bomb manufacturing, created by our up river nuclear scientists from LANL. Health risks such as genetic mutations, birth defects, low birth weight, infertility, premature birth, environmental illness, and auto immune disease from the synergistic and cumulative effects of contaminants such as: Americium-241, Neptunium-237, Plutonium-238, 239, and 240, Cesium-137, Strontium-90, and Tritium, Selenium, Hexavalent Chromium, PCB, and Perchlorate in our drinking and food growing water and our air; need further research and documentation.

**WE the People United of this Community Respectfully Intend that there be Created:**

1. An Independent toxicologists or medical review panel with current experience in nuclear toxic exposure as related to disease, environmental and embryological risk factors be consulted to research our continued concerns for the health and safety of pregnant women and children that drink water, eat food and breath air with nuclear contamination living in an area with highly unresolved environmental "background radiation".
2. A volunteer citizen review panel to work with the BDD Board to assure all public health concerns is addressed fully before \$215 million continues to be spent.
3. More frequent Town Hall Meeting to monitor tax spending and safety issues publicly
4. Verification that the surrounding area of the Rio Grande BDD Projects site be free of potential increases of emerging nuclear bomb waste with all cost of protective research, early warning system, and clean up being financially accountable to LANL.
5. Regionally controlled sun, wind, and turbine energy for water purity and transport.
6. Alternative long term sustainable water resources to be funded concurrently as the BDD Project that include roof top catchments and filtration, effluent bio-digesters, deep saline aquifer filtration, aquifer research, and major water conservation education programs.

**WE the People United of this Community Respectfully Intend that there be Created:**

- 1 An Independent toxicologists or medical review panel with current experience in nuclear toxic exposure as related to disease, environmental and embryological risk factors be consulted to research our continued concerns for the health and safety of pregnant women and children that drink water, eat food and breath air with nuclear contamination living in an area with highly unresolved environmental "background radiation".
2. A volunteer citizen review panel to work with the BDD Board to assure all public health concerns is addressed fully before \$215 million continues to be spent.
3. More frequent Town Hall Meeting to monitor tax spending and safety issues publicly
4. Verification that the surrounding area of the Rio Grande BDD Projects site be free of potential increases of emerging nuclear bomb waste with all cost of protective research, early warning system, and clean up being financially accountable to LANL.
5. Regionally controlled sun, wind, and turbine energy for water purity and transport.
6. Alternative long term sustainable water resources to be funded concurrently as the BDD Project that include roof top catchments and filtration, effluent bio-digesters, deep saline aquifer filtration, aquifer research, and major water conservation education programs.

## HEALTHY WATER NOW ASAP

We the People United of the Sole Source Espanola Aquifer Basin and Santa Fe Community respectfully request that the Powers that Be hear our concerns and act in our behalf to protect and preserve our living waters that affect the health of all our women, men, pregnant women, infants children, sick and the aged.

The Buckman Direct Diversion Project continues to spend \$215 million plus without adequate research and documentation that our health and safety will be protected by the diversions of Rio Grande river water containing emerging radioactive contamination from nuclear bomb waste created by our up river nuclear scientists from LANL. Health risks such as genetic mutations which cause birth defects, low birth weight, premature birth, environmental illness, and auto immune disease from the synergistic and cumulative effects of include Americium-241, Neptunium-237, Plutonium-238, 239, and 240, Cesium-137, Strontium-90, and Tritium, Selenium, Hexavalent Chromium, PCB, and Perchlorate in our drinking and food growing water and our air, need further research and documentation.

**WE the People United of this Community Respectfully Intend that there be Created:**

1. An independent toxicologists or medical review panel with current experience in nuclear related disease and embryological risk factors be consulted to research our continued concerns about health and safety for women and children from drinking water and eating food with nuclear contamination in a area with highly unresolved "background radiation" also in our air.
2. A citizen review board be put into place to work with the BBD Board to assure that all public health concerns are addressed fully before \$215 plus dollars continues to be spent
3. More frequent Town Hall Meeting to meeting to monitor tax spending
4. Verification that the surrounding area of the Rio Grande BBD Projects site be free of potential increases of emerging nuclear bomb waste with all cost of protective research, early warning system, and clean up are financially accountable to LANL.
5. BBD energy will be provided by wind, solar and micro -turbine generation technology
6. Alternative long term sustainable water sources to be developed concurrently as the BBD Project that include roof top catchments and filtration, effluent bio-digesters, deep saline aquifer filtration and major water conservation education programs.

## HEALTHY WATER NOW ASAP

We the People United of the Sole Source Espanola Basin Aquifer and Santa Fe Community respectfully request that the Powers that Be hear our concerns and act in our behalf to protect and preserve our living waters that affect the health of all our women, men, pregnant women, infants children, sick and the aged.

The Buckman Direct Diversion Project (BDD) continues to spend \$215 million plus without adequate research and documentation that our health and safety will be protected by the diversion of Rio Grande river water containing emerging radioactive, toxic and hazardous contamination from nuclear bomb manufacturing, created by our up river nuclear scientists from LANL. Health risks such as genetic mutations, birth defects, low birth weight, infertility, premature birth, environmental illness, and auto immune disease from the synergistic and cumulative effects of contaminants such as: **Americium-241, Neptunium-237, Plutonium-238, 239, and 240, Cesium-137, Strontium-90, and Tritium, Selenium, Hexavalent Chromium, PCB, and Perchlorate in our drinking and food growing water and our air; need further research and documentation.**

**WE the People United of this Community Respectfully intend that there be Created:**

- 1 An Independent toxicologists or medical review panel with current experience in nuclear toxic exposure as related to disease, environmental and embryological risk factors be consulted to research our continued concerns for the health and safety of pregnant women and children that drink water, eat food and breath air with nuclear contamination living in an area with highly unresolved environmental "background radiation".
2. A volunteer citizen review panel to work with the BDD Board to assure all public health concerns is addressed fully before \$215 million continues to be spent.
3. More frequent Town Hall Meeting to monitor tax spending and safety issues publicly
4. Verification that the surrounding area of the Rio Grande BDD Projects site be free of potential increases of emerging nuclear bomb waste with all cost of protective research, early warning system, and clean up being financially accountable to LANL.
5. Regionally controlled sun, wind, and turbine energy for water purity and transport.
6. Alternative long term sustainable water resources to be funded concurrently as the BDD Project that include roof top catchments and filtration, effluent bio-digesters, deep saline aquifer filtration, aquifer research, and major water conservation education programs.
