Steam Cleaning

Clean Harbors Steam Cleaning Services remove all types of stains from concrete, oil from surfaces, and residues from process equipment utilizing steam pressure washers ranging from 600 to 4,000 psi at 13-15 gpm, and temperatures ranging from ambient to 200 degrees. To maximize cleaning effectiveness, we add specially chemicals, detergents, degreasers, mild acids and bases as needed.

Compared to traditional hydro-wash techniques, the volume of waste generated from steam cleaning is reduced, which may result in lower overall project costs.

Typical Steam Cleaning Applications

- Heat exchangers
- Heavy equipment
- Pipelines
- Tanks
- Surface preparation
- Cosmetic cleaning such as graffiti
- Line and equipment thawing
- Spill cleanup
- Decontamination
