Subject: ANNUAL HAZARDOUS WASTE TREATABILITY REPORT

The purpose of this letter is to provide the hazardous waste treatability study report required by Title 20 of the New Mexico Administrative Code, Chapter 4, Part 1, as revised Jan. 1, 1997, (20 NMAC 4.1), Subpart II, 261.4 (f)(9).

Los Alamos National Laboratory (LANL) staff completed one treatability study in 2000. One study is currently being planned for a start later this spring and will run for the duration of the summer. In the event that other treatability studies are proposed, a notice of intent to conduct the study will be prepared and be submitted to your office as required by 20 NMAC 4.1, Subpart II, 261.4 (f)(1).

The treatability study completed this year was begun in 1999. The final report on that study is not currently available to be included in this report. As soon as it becomes available a supplemental notice will be filed to this report to closeout this activity.

The proposed treatability study for this summer deals with the stabilization of barium using sulfate treatments. The study will involve mixing small amounts of NsSO4 and possibly other sulfates in solution with BA-contaminated soils. It is anticipated that no more that 10 kg of material classified as D005 based on TCLP analysis will be used for this study. More detail on the study will be provided with the 45-day notification required for treatability studies.

If you have any questions regarding the hazardous waste treatability study reporting documents contained in this report, please contact me at 667-0633.

Sincerely,

Jack Ellvinger
