Subject: P-1 limited-suite sediment sampling

Interested Parties:

We are scheduled to collect a 3rd round of sediment samples from reach P-1 on Wednesday, June 25. A total of 31 samples are currently planned from 19 sites, mostly downstream of Acid Canyon but also including 2 samples each from lower Acid Canyon and from Pueblo Canyon just upstream of Acid. Plutonium analyses will be obtained on all samples, and Cs, Am, and the Target Analyte List metals for 7 samples, the latter to better evaluate colocation issues and contaminant sources. I can provide more details and planned sample locations and target horizons if anyone is interested.

Please feel free to contact me for any reason.

Steve
