Subject: Reach P-2 and P-3 Sediment Sampling

We are scheduled to collect our second round of sediment samples from Reaches P-2 and P-3 November 24 and 25. The main goals of this sampling event are to reduce the uncertainty in Pu concentrations, distribution, and inventory, and to evaluate concentrations of other analytes that have been detected above background in Pueblo Canyon. Our limited suite for this sampling round will include Pu, Am, Cs, metals, PCBs, and pesticides on about 10-20 samples, and Pu only on a larger number.

This will be the last of the major sampling events that we have planned for Los Alamos and Pueblo Canyons this CY, although we may collect some additional samples in December from P-3 using a drill rig as the depth distribution of Pu in Pueblo Canyon remains a significant uncertainty. If you would like to observe the sampling or if you have any questions please feel free to contact me.

Steve
