**RE: APPROVAL WITH MODIFICATIONS
COMPLETION REPORT FOR REGIONAL AQUIFER WELL R-50
LOS ALAMOS NATIONAL LABORATORY
EPA ID#NM0890010515
HWB-LANL-10-060**

Dear Messrs. Rael and Graham:

The New Mexico Environment Department (NMED) is in receipt of the United States Department of Energy (DOE) and Los Alamos National Security, L.L.C.'s (collectively, the Permittees) document entitled *Completion Report for Regional Aquifer Well R-50* (Report) dated July, 2010 and referenced by EP2010-0271. NMED hereby approves the Report with the following modifications.

1. Section 3.2, Chronological Drilling Activities for the R-50 Well, Drilling Activities at R-50 Borehole, page 4:

As noted in this section, a drive shoe and a stainless-steel weight from a tagline were inadvertently left down-hole at approximately 555 and 570 feet below ground surface, respectively. An attempt was made to remove the shoe and weight by milling followed by drilling with a reaming bit and a tricone bit. As stated in this section, "*Stainless-steel shavings were observed in the discharge, and the*

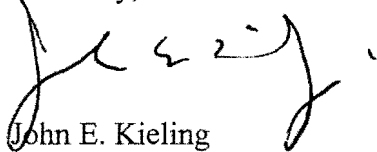

34645

milling tool was removed from the hole, but the field crew was not optimistic that the entire piece of stainless-steel tagline weight had been cleared from the borehole". It is unlikely that the shavings from the shoe and weight migrated much further down-hole or to the regional water table. However, in order to support the representativeness of groundwater samples collected at R-50, the Permittees must monitor the trace-element hydrogeochemical conditions with attention to impacts from the possible presence of metal shavings from the shoe and/or stainless-steel weight.

No revision of the Report is necessary. Please call Michael Dale of my staff at (505) 661-2673 if you have questions.

Sincerely,

John E. Kieling
Acting Chief
Hazardous Waste Bureau
