BUREAU

Dear Ms. Hunter:

Subject: Notice of Intent to Conduct a Tracer Study at Los Alamos National Laboratory

In accordance with Subsection A of 20.6.2.1201 New Mexico Administrative Code (NMAC), the U.S. Department of Energy and Los Alamos National Security, LLC (DOE/LANS) are filing this notice of intent (NOI) to conduct a tracer study at Los Alamos National Laboratory. Groundwater tracers will be deployed at up to six locations to test the connectivity of various parts of the chromium contaminated regional aquifer beneath Mortandad Canyon, to evaluate the solute transport characteristics of the aquifer, and to support the future assessment of potential remedial alternatives for the contaminated groundwater. Enclosure 1 contains a completed New Mexico Environment Department (NMED) Ground Water Quality Bureau NOI form. Enclosures 2 and 3 provide information to support this notice.

ENCLOSURE 1

**Completed NMED GWQB
Notice of Intent (NOI) to Discharge Form**

EPC-DO-16-047

LA-UR-16-20965

Date: **MAR 0 4 2016**

1. **Name and mailing address of person proposing to discharge:**
Stephani F. Swickley
Los Alamos National Security, LLC
P.O. Box 1663, Mail Stop M992
Los Alamos, NM 87544
Point of Contact: Robert S. Beers, 505-667-7969, bbeers@lanl.gov
Work Phone: 505-606-1628
Email: fuller@lanl.gov
2. **Name of facility:** Los Alamos National Laboratory (LANL).
3. **Physical location of discharge (if applicable, give street address, township, range, section, distance from closest town or landmark, directions to facility, location map):** LANL Technical Area (TA)-05 in Township 19N, Range 6E, Section 24. Enclosure 2 contains a location map of the project site.
4. **Type of operation generating the discharge (e.g., truck wash, food processing plant, restaurant, etc.):**
This tracer study is being conducted to test the connectivity of various parts of the Cr(VI)-contaminated regional aquifer beneath Mortandad Canyon, to evaluate the solute transport characteristics of the aquifer, and to support the future assessment of potential remedial alternatives for the contaminated groundwater.
5. **Source(s) of the discharge. Describe how the wastewater, sludge, or other discharges processed and/or disposed at your facility are generated. Identify all sources. Attach additional pages if needed:**
Multiple nonreactive tracers and an alkaline (pH ~10) buffer solution, will be deployed to the regional aquifer. The tracers include five different naphthalene sulfonates, deuterated water (D₂O), sodium bromide (NaBr), and sodium perthenate (NaReO₄). For the alkaline buffer solution, sodium carbonate (Na₂CO₃) and sodium bicarbonate (NaHCO₃) will be used in roughly equal molar proportions to produce a solution of approximately pH 10. See Table 1 below.

Table 1. Summary of the proposed tracers, locations, and quantities.

Locale	Unit	Tracer(s)/ Solution	Quantity Injected ^a	Volume of Solution Injected ^a	Notes
R-50#1	Regional Aquifer	Na-1,5 NDS ^b	2 g	<300 gal. (1 casing volume [CV])	Dilution test. Anticipated recovery: <2%. Involves injection of tracer and monitoring of migration of tracer away from the well.
CrPZ-2a	Regional Aquifer	Na-2,7 NDS NaReO ₄	25 kg 3 kg	10,000 gal. + 10,000 gal. chase/flush water (treated or potable)	Injection point for cross- hole test. ^d
CrPZ-2b	Regional Aquifer	Na-2 NS ^c D ₂ O	25 kg 100 kg	42,000 gal. + 21,000 gal. chase/flush water (treated or potable)	Injection point for cross- hole test. ^d
R-28	Regional Aquifer	Na-1 NS NaBr	25 kg 150 kg	42,000 gal. + 21,000 gal. chase/flush water (treated or potable)	Injection point for cross-hole test. ^d
CrPZ-3 or R-42	Regional Aquifer	NaHCO ₃ Na ₂ CO ₃	32 kg 41 kg	21,000 gal. + 500 gal. chase/flush water (treated or potable)	Push-pull test to evaluate desorption of Cr(VI) from aquifer sediment surfaces caused by injection of alkaline solution. Test involves injection of alkaline water, followed by a wait period, then pumping at injection point to recover alkaline water and mobilized Cr(VI). Anticipated recovery: ~80%.
CrPZ-3 or R-42	Regional Aquifer	Na-2,6-NDS	100 kg	42,000 gal. + 2500 gal. chase/flush water (treated or potable)	Injection point for cross-hole test. ^d

Notes: Table 1 presents an approximation of the types and masses of tracers that may be utilized. Final details are subject to NMED-GWQB approval.

^a Tracer masses and water volumes are selected to optimize probability of detection at downgradient locations, but also to minimize potential density-driven tracer flow. These may be adjusted, particularly if piezometers accept injection flow only very slowly and it is impractical to inject large volumes.

^b NDS = Naphthalene disulfonate.

^c NS = Naphthalene sulfonate.

^d Potential recoveries range from zero to 100% for all tracers at CrEX-3 over a 3-year period. Tracers will also be monitored for their appearance in CrEX-1, in quarterly-sampled monitoring wells, and in any new wells that are installed in the vicinity of the tracer injections. Peak tracer concentrations in CrEX-3 could range from <0.1 µg/L to 1 mg/L, with a possibility of tracer concentrations remaining below detection limits. It is anticipated that if tracers do not appear at CrEX-3 or CrEX-1 they may be detected at other locations. If tracers appear in monitoring wells, they are likely to have higher concentrations than in CrEX-3 or CrEX-1 because of lack of dilution resulting from long-term pumping.

6. Expected contaminants in the discharge (e.g., nitrate-nitrogen, metals, organic compounds, salts, etc.) Include estimated concentration if known, and copies of results of laboratory analyses, if available:

The tracers listed in Table 1 will be introduced at the quantities listed in Table 1. The approximate total mass of tracers used will be as follows.

✓ sodium naphthalene sulfonates	175 kg
✓ sodium bromide (NaBr)	150 kg
✓ deuterated water (D ₂ O)	100 kg
✓ sodium perhenate (NaReO ₄)	3 kg
✓ sodium bicarbonate (NaHCO ₃)	32 kg
✓ sodium carbonate (NaCO ₃)	41 kg

Enclosure 3 provides the Safety Data Sheets (SDSs) for the proposed tracers.

7. Describe all components of wastewater processing, treatment, storage, and disposal system (e.g., grease interceptor, lagoon, septic tank/leachfield, etc.) Include sizes, site layout map, plans and specifications, etc. if available:

- ✓ Regional aquifer monitoring wells: R-50 (screen #1), R-28, and R-42
- ✓ Corehole piezometers: CrPZ-2a, CrPZ-2b, and CrPz-3
- ✓ Tracers (see Table 1)
- ✓ Treated regional aquifer groundwater from Cr Project wells or potable water from the Los Alamos County Water Supply System

8. Estimated maximum daily discharge volume in gallons per day (or other units):

Total discharge of tracer solution is approximately 50,000 gallons.
Daily maximum discharge is approximately 12,000 gallons.

9. Estimated depth to ground water (ft): Approximately 850-900 ft. below ground surface (bgs).
