## SUBJECT: R-12 COMPLETION NOTIFICATION

Dear Mr. Kieling:

The Laboratory's Environmental Restoration Project is planning to return to regional groundwater characterization well R-12 for removal of the existing, temporary well casing, deepening of the borehole by approximately 40 ft, and installing the permanent well casing. Activities will begin on or about October 28, 1999, through approximately December 15, 1999. The R-12 borehole was "parked" with a temporary, PVC well casing at a depth of 800 ft in June 1998. The well will be developed following completion. Regional groundwater characterization well R-12 is located in Sandia Canyon, at the eastern boundary of the Laboratory, west of State Road 4. A separate notification will be submitted to you prior to quarterly sampling. R-12 is being installed as part of the Laboratory's Hydrogeologic Work Plan (ESH-18/WQ&H-97-0014).

If you have any questions or concerns please feel free to give me a call at (505) 667-0819.

Sincerely,

David McInroy  
Environmental Restoration Project
