Lab Qualifier	Description
*	(Inorganic)- Duplicate analysis not within control limits. (Organic) - Spike recovery is equal to or outside the control criteria used.
B	(Inorganic) - reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). (Organic) - Analyte present in the blank and the sample.
B*	(Inorganic) - reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). (Inorganic)- Duplicate analysis not within control limits.
BE	Low surrogate recovery; analyzed twice
BNE	(Inorganic)-The value is between the instrument detection limit and the contract required detection limit., The qualifier that is used when the percent difference between the parent sample and its serial dilution?s concentrations exceeds 10%., Spiked sample recovery not within control limits.
BN	(Organic) - Analyte was detected in the associated method blank as well as in the sample. Presumptive evidence based on a mass spectral library search to make a tentative identification of the analyte.
D	(Organic) - Analytes analyzed at a secondary dilution.
E	(Inorganic) Paragon- Reported value is estimated because of the presence of interference. GEL-Percent difference between the parent sample and its serial dilution's concentration exceeds 10%. (Organic) - Analyte concentration exceeded the upper level
E*	(Inorganic) Paragon- Reported value is estimated because of the presence of interference. GEL-Percent difference between the parent sample and its serial dilution concentration exceeds 10%. - Duplicate analysis not within control limits.
J	(Inorganic) -The associated numerical value is an estimated quantity. (Organic) - The associated numerical value is an estimated quantity.
JB	(Organic) The value is an estimated quantity between MDL and PQL in the blank
JBD	(Organic) The value is anestimated quantity between MDL and PQL in blank and the percent difference between the 2 columns is greater than 40%
JD	(Organic) The value is an estimated quantity and the percent difference between the 2 columns is greater than 40%
LT	Spectral interfernce problems for RAD D
N	(Inorganic) - Spiked sample recovery not within control limits. (Organic) -Presumptive evidence based on a mass spectral library search to make a tentative identification of the analyte.
N*	(Inorganic) - Spiked sample recovery not within control limits. Duplicate analysis not within control limits.
NE	(Inorganic) The matrix spike was not within control limits (80-120) in the serial dilutions
NE*	(Inorganic) The matrix spike was not within control limits (80-120) in the serial dilution duplicate
P	(Organic) - > 40% difference for detected concentrations between two columns -- changed from 25% per DOE SOW Rev.4 (6/30/04)
SI	Spectral interfernce problems for RAD
TI	Spectral interfernce problems for RAD B
U	(Inorganic) -The material was analyzed for, but was not detected above the level of the associated numeric value. The associated numerical value is either the sample quantitation limit or the sample detection limit. (Organic) -The material was analyzed
U*	(Inorganic) - Compound was analyzed for, but was not detected. Duplicate analysis not within control limits.
UD	(Organic) The value was analyzed for, but not detected. The percent difference between the columns exceeded 40%
UJ	(Inorganic) - The material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise. (Organic) -The material was analyzed for, but was not detected. Quantitation limit is an estimated quantity.
UL	(Organic) The value was analyzed for, but not detected.
UN	(Inorganic) - Compound was analyzed for,but was not detected. - Spiked sample recovery not within control limits.
UW	Analyte analyzed for but was not detected. Post digestion spike recovery is outside control.
X	Reported concentration is a false positive
LANL Validation Qualifier	**Description**
J	The analyte is classified as detected but the reported concentration value is expected to be more uncertain than usual.
J+	The analyte is classified as detected but the reported concentration value is expected to be more uncertain than usual with a potential positive bias.
J-	The analyte is classified as detected but the reported concentration value is expected to be more uncertain than usual with a potential negative bias.
U	The analyte is classified as not detected.
UJ	The analyte is classified as not detected, with an expectation that the reported result is more uncertain than usual.

WS = base flow surface water
WT = storm water
F = filtered sample
UF = unfiltered sample
- = information field was blank or unpopulated in data base

Header	Description
Location	Location ID/Location Synonym (Gage number or Abbreviation)
Collection Date	Date Collected
Field Matrix	Matrix designation assigned by Field Team
Field Prep	F=filtered,dissolved; UF=unfiltered,total
Analyte Code	CAS number for organics; chemical symbol or abbreviation for others
Analyte Name	Constituent by name
Result	result reported by Laboratory standardized to common reporting units
Units	units of measure
Detect Status	detection status (D=detect, U=nondetect); the utility of this column is that it shows status used in screening and plots (shows decision based on Uncert, MDA, MDL, Lab Qual, Valid Qual)
Uncertainty	Uncertainty (same as TPU for rads)
MDA	minimum detectable activity (rads)
MDL	minimum detection limit
Lab Qualifier	Laboratory Qualifier
LANL Validation Qualifier	LANL Validation Qualifier
Lab Name Code	Code for Analytical Laboratory Name
Analytical Suite	Suite or grouping of constituents for analysis
Analytical Method	Analytical Method used for quantification
URI	Unique Record Identifier (data base ID)
Sample ID	LANL Sample ID
Notes for Table	
WS = base flow surface water	
WT = storm water	
F = filtered sample	
UF = unfiltered sample	
- = information field was blank or unpopulated in data base	
Numbers are not truncated. Results that were mg/L were converted to ug/L to be consistent with screening values.	
Lab Qualifier	**Description**
-	information field was blank or unpopulated in data base
*	(Inorganic)- Duplicate analysis not within control limits. (Organic) - Spike recovery is equal to or outside the control criteria used.
B	(Inorganic) - reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). (Organic) - Analyte present in the blank and the sample.
B*	(Inorganic) - reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL). (Inorganic)- Duplicate analysis not within control limits.
BE	Low surrogate recovery; analyzed twice
BE*	(inorganics) - reported value <CRDL and >IDL. Percent difference between the parent sample and its serial dilution's concentration exceeds 10%. Duplicate analysis not within control limits.
BJ	(Inorganic)- The associated numeric value is an estimated quantity. The reported value was obtained from a reading that was less the Contract Required Detection Limit.
BN	(Organic) - Analyte was detected in the associated method blank as well as in the sample. Presumptive evidence based on a mass spectral library search to make a tentative identification of the analyte.
BN*	(inorganics) - reported value <CRDL and >IDL. Duplicate Analysis not within control limits. Spiked sample recovery not within control limits.
E	(Inorganic) Paragon- Reported value is estimated because of the presence of interference. GEL- Percent difference between the parent sample and its serial dilution's concentration exceeds 10%. (Organic) - Analyte concentration exceeded the upper level of
E*	(Inorganic) Paragon- Reported value is estimated because of the presence of interference. GEL- Percent difference between the parent sample and its serial dilution concentration exceeds 10%. - Duplicate analysis not within control limits. (Organic) -
EJ	(Inorganic) - Paragon- Reported value is estimated because of the presence of interference. GEL- Percent difference between the parent sample and its serial dilution's concentration exceeds 10%. Having concentrations between the MDL and the PQL (or reporting limit).
EN	(Organic) - Identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis. Presumptive evidence based on a mass spectral library search to make a tentative identification of the analyte. (Inorganic) - The qualifier that is used when the percent difference between the parent sample and its serial dilution's concentration exceeds 10%. The sample's concentration must be greater than 50 times the IDL/MDL for ICP or 100 times
H	Holding time exceeded
J	(Inorganic) -The associated numerical value is an estimated quantity. (Organic) - The associated numerical value is an estimated quantity.
JN	(Inorganic) - Having concentrations between the MDL and the PQL (or reporting limit). Analytical results associated with a spike analysis that was outside control limits.
N	(Inorganic) - Spiked sample recovery not within control limits. (Organic) -Presumptive evidence based on a mass spectral library search to make a tentative identification of the analyte.
N*	(Inorganic) - Spiked sample recovery not within control limits. Duplicate analysis not within control limits.
U	(Inorganic) -The material was analyzed for, but was not detected above the level of the associated numeric value. The associated numerical value is either the sample quantitation limit or the sample detection limit. (Organic) -The material was analyzed
U*	(Inorganic) - Compound was analyzed for, but was not detected. Duplicate analysis not within control limits.
UE	(Inorganic) - Compound was analyzed for, but was not detected. Reported value is estimated because of the presence of interference.
UN	(Inorganic) - Compound was analyzed for,but was not detected. - Spiked sample recovery not within control limits.
UUI	compound analyzed for, but not detected above detection limit; uncertain identification for gamma spectroscopy
X	Reported concentration is a false positive
LANL Validation Qualifier	**Description**
-	information field was blank or unpopulated in data base
A	The contractually-required supporting documentation for this datum is absent.
J	The analyte is classified as detected but the reported concentration value is expected to be more uncertain than usual.
J+	The analyte is classified as detected but the reported concentration value is expected to be more uncertain than usual with a potential positive bias.
J-	The analyte is classified as detected but the reported concentration value is expected to be more uncertain than usual with a potential negative bias.
JN-	Presumptive evidence of the presence of the material at an an estimated quantity with a suspected negative bias.
PM	Manual review of raw data is recommended to determine if the observed non-compliances with quality acceptance criteria adversely impacts data use.
U	The analyte is classified as not detected.
UJ	The analyte is classified as not detected, with an expectation that the reported result is more uncertain than usual.
