**DUMPING MATERIAL IN THE BURNING GROUND CANYON**

H-3

*Part Area P*

Reference : Group GMX-3 SOP 12.3.6

*413  
77 06*

Permission is requested to allow The Zia Company to dump about three truckloads of noncombustible debris in the canyon north of TA-16-387. This material is noncombustible debris left from burning old explosive buildings and magazines at TA-6. This material should be essentially free of any HE contamination, since fire was used to destroy the buildings. However, it is felt that it should not be deposited in an area open to the public because of the slight possibility of hidden HE contamination. I do not feel that the possible amount of HE contamination is great enough to increase the explosive hazard in this dump. No combustibile material is to be included and arrangements to enter and leave the burning ground area will be made in advance by Group ENG-4 with T. B. Harris, Group GMX-3.
