FROM : Engineering Department

File

SUBJECT: MATERIALS DISPOSAL AREAS - REVISED DRAWING ENG-R 102, (REV. 12)

SYMBOL : ENG-3

1201
[Handwritten initials]

For your information and retention we are transmitting herewith Copy No. 309 of the subject map, which has been revised to include four additional disposal areas; which are identified as Areas "M", "N", "P", and "Q".

Area "M" is an old disposal site, located in an easterly direction from TA-8, Anchor Site West; containing miscellaneous metallic objects, conduits, remnants of concrete, and other items of junk, much of which is suspect of being contaminated with explosives or chemicals.

Area "N" is a pit located east of Building R-23, TA-15; containing remnants of several structures from R-Site which had been exposed to explosives or chemical contamination.

Area "P" is a canyon, (Canyon de Valle), located immediately north of Building 16-387, TA-16; miscellaneous non-combustible materials have been placed in the canyon, including remnants of structures which were burned in 1960 at TA-6, Two Mile Mesa Site, and TA-9, Anchor Site East. The materials had been exposed to explosives or chemical contamination.

Area "Q" is a pit located at the original TA-8, Anchor Site West, where a number of discarded gun barrels were buried years ago.

Please advise this office if you are aware of any other areas where hazardous materials have been disposed of, so that we may include them on future revisions of the map; if additional copies of the revised drawing are required, please contact this office. The drawing in its present form is unclassified.
