

OFFICE MEMORANDUM

TO : File

DATE: November 17, 1976

FROM : Linda Trocki

SUBJECT : OCTOBER 1976 REPORT

SYMBOL : H8-WS-690

0741 TA-06

Soil samples were collected at phoswich "hot spots" in abandoned Waste Disposal Area C (see September 1976 Report). A phoswich survey of the larger pit in abandoned Waste Disposal Area F showed the area to be all background. The purpose of this survey is to determine if any radioactivity, strontium in particular, went into the pit. A grid of soil samples was collected on and around the pit. Locations are shown on an accompanying map.

Waste Disposal Pit #13 at TA-54 was geologically mapped and approved for use. The geologic description and a photo of the pit is attached. (Negative #7612381).

Examination of abandoned Waste Disposal Area B will be begun in November. The initial step is to determine pit boundaries not shown on engineering drawings.
