DOE Order 5400.5, *Radiation Protection of the Public and the Environment*, contains requirements and guidelines for clean up of residual radioactive material contained in real property (land and structures) and its subsequent release following such clean up. Prior to the release, it must be demonstrated that basic and supplemental dose limits will be met and sufficient documentation is in place to justify such release.

To ensure that these requirements are consistently met at DOE/AL sites, a procedure was developed defining the documentation required and the process to be followed when considering requests for release of real property. This procedure is attached for your use.

Should you have any questions regarding this procedure, please contact Rex Borders at (505) 845-5076.

Constance L. Soden
