SUBJECT AERIAL PHOTOS

SYMBOL LS6-81-26

MAIL STOP 495

In September 1974 we had the LANL reservation and surrounding area (from Frijoles Canyon to Guaje Canyon and from the crest of the Sierra de los Valles to the Rio Grande) photographed from the air. One series of flight lines was used to produce 7 composite, color aerial photos and another series (38 lines) to produce a set of color stereo pairs. We had no financial assistance from any other group at the Lab. After we produced the aerial photography, there were a lot of people who expected us to give them copies or some of the photos. The decision was made to sell copies to others at a price that would allow us to recoup part of our financial outlay.

Some of the stereo pairs were apparently loaned to others. I have recovered all but 3 of them.

No. 15-147 which covers part of Kappa Site, Pajarito Canyon and Mesita del Buey.

No. 19-10 which covers part of Kappa Site and Water Canyon

No. 21-67 which covers TA-15, R-Site

We are also missing a complete new set of stereo pairs that were in the possession of Wayne C. Hansen until he left; and according to him, placed in the cage in OHL Basement.

Attached is a copy of a photo from the set of stereo pairs reduced to 70%.

If anyone has any idea where these photos are, I would appreciate knowing.
