RE: Modified Corrective Action Report for the TA-15 Connector Road
Project Discharge

Dear Mr. Rae:

Pursuant to Section 1203 A.7. of the New Mexico Water Quality Control Commission (WQCC) Regulations, Surface Water Quality Bureau (SWQB) staff have reviewed the modified corrective action report for the TA-15 Connector Road Project discharge.

The Sampling Plan prepared for the TA-15 and TA-36 fill material area has been deemed adequate. SWQB understands that sampling will begin as soon as weather permits and that SWQB and NMED DOE/AIP will be notified 1 week prior to sampling. Sampling results will be transmitted to SWQB as soon as all data is received, at which time, SWQB will make a determination as to whether further mitigation is necessary or closure has been achieved for this discharge.

A Storm Water Pollution Prevention (SWPP) Plan, although not required for this site, was also submitted as part of the modified corrective action report. This plan will be kept on file in order to document the erosion control measures that are currently in place and interim control measures that are currently in place and interim control measures that are to be taken. It is implied that additional project specifications for the final stabilization of the site are being revised and that when available will be provided to SWQB for incorporation into their copy of the SWPP.

3933

Mr. Steve Rae
